The ivs drive is a low harmonic drive via built-in dc line reactors. This does not guaranty performance to any system wide harmonic specification or the costs to meet a system wide specification. If supplied with the system electrical details, Armstrong will run a computer simulation of the system wide harmonics. If system harmonic levels are exceeded Armstrong can also recommend additional harmonic mitigation and the costs for such mitigation.

Protocol (standard):
- BACnet™ MS/TP
- BACnet™ TCP/IP
- Modbus RTU

Enclosure:
- Indoor – UL Type 12
- Outdoor – UL Type 4X with Weather Shield
- Outdoor – UL Type 4X less Weather Shield

Fused disconnect switch:
- EMI/RFI control: Integrated filter designed to meet EN61800-3

Harmonic suppression:
- Dual dc-link reactors (Equivalent: 5% ac line reactor)
- Supporting IEEE 519-1992 requirements**

Cooling:
- Fan-cooled through back channel

Ambient temperature:
- -10°C to +45°C up to 1000 meters above sea level (+14°F to +113°F, 3300 ft)

Analog I/O:
- Two current or voltage inputs, one speed output

Digital I/O:
- Two inputs, two outputs

Pulse inputs:
- Two programmable

Relay outputs:
- Two programmable

Communication port: 1-RS485

** The ivs drive is a low harmonic drive via built-in dc line reactors. This does not guaranty performance to any system wide harmonic specification or the costs to meet a system wide specification. If supplied with the system electrical details, Armstrong will run a computer simulation of the system wide harmonics. If system harmonic levels are exceeded Armstrong can also recommend additional harmonic mitigation and the costs for such mitigation.

Flow Readout Accuracy
The Design Envelope model selected will provide flow reading on the controls local keypad & digitally for the BMS. The model readout will be factory tested to ensure ±5% accuracy.
**OPTIONS**

**SENSORLESS BUNDLE (STANDARD)**
Operation of pump without a remote sensor. Includes:
- Sensorless control
- Flow readout
- Constant flow
- Constant pressure

Minimum system pressure to be maintained ft (m)

* If minimum maintained system pressure is not known: Default to 40% of design head

**PARALLEL SENSORLESS (STANDARD)**
Operation of multiple pumps without a remote sensor

Minimum system pressure to be maintained ft (m)

* If minimum maintained system pressure is not known: Default to 40% of design head

**ENERGY PERFORMANCE BUNDLE**
Provides energy savings on oversized systems by adjusting pump parameters to on-site conditions. Includes:
- Auto-flow balancing – Automatically determines control curve between design flow at on-site system head, and minimum (zero-head) flow for energy savings
- Maximum flow control – Limits flow rate to pre-set maximum for potential energy savings

Maximum flow rate gpm (L/s)

*Only available if sensorless bundle is enabled

**PROTECTION BUNDLE**
Protects other flow sensitive equipment by setting limits of pump operation. Includes:
- Minimum flow control – Attempts to maintain flow rate to pre-set minimum to protect equipment in system
- Bypass valve control – Actuates a bypass valve to protect flow sensitive equipment if pre-set minimum flow rate is reached

Minimum flow rate gpm (L/s)

*Only available if sensorless bundle is enabled

**ZONE OPTIMIZATION BUNDLE**
Controls pumps to ensure multiple zones are satisfied for heating or cooling

- 2 sensor control – Controls pumps in a 2-zone application to ensure both zones are always satisfied for heating or cooling

**DUAL SEASON SETUP**
Pre-sets heating and cooling parameters for pumps in 2-pipe systems

**COOLING**
Duty point gpm (L/s) at ft (m)
Minimum system pressure to be maintained ft (m)

**HEATING**
Duty point gpm (L/s) at ft (m)
Minimum system pressure to be maintained ft (m)

**OPTIONAL SERVICES**

**ON-SITE PUMP COMMISSIONING**
Where purchased and applicable, on-site commissioning by an Armstrong representative will include setting up communication with the Pump (not wiring to BAS), adjusting parameters to match on-site conditions, register the pumps for enhanced warranty and connect the pumps to the router as part of the activation of Pump Manager.

**PUMP MANAGER**
As a Performance Management Service, Pump Manager is an online automated fault detection and diagnostic service for sustained performance and enhanced reliability. It includes advanced trending, alerts of variance in performance and automated reports.

Available in yearly increments. Includes an option for a price discount on the Extended Warranty Service.

*The Service requires an active internet connection.*
