## 1 How to Read these Operating Instructions

### 1.1.1 Copyright, Limitation of Liability and Revision Rights

This publication contains information proprietary to Armstrong. By accepting and using this manual the user agrees that the information contained herein will be used solely for operating equipment from Armstrong or equipment from other vendors provided that such equipment is intended for communication with Armstrong equipment over a serial communication link. This publication is protected under the Copyright laws of Denmark and most other countries.

Armstrong does not warrant that a software program produced according to the guidelines provided in this manual will function properly in every physical, hardware or software environment.

Although Armstrong has tested and reviewed the documentation within this manual, Armstrong makes no warranty or representation, neither expressed nor implied, with respect to this documentation, including its quality, performance, or fitness for a particular purpose.

In no event shall Armstrong be liable for direct, indirect, special, incidental, or consequential damages arising out of the use, or the inability to use information contained in this manual, even if advised of the possibility of such damages. In particular, Armstrong is not responsible for any costs, including but not limited to those incurred as a result of lost profits or revenue, loss or damage of equipment, loss of computer programs, loss of data, the costs to substitute these, or any claims by third parties.

Armstrong reserves the right to revise this publication at any time and to make changes to its contents without prior notice or any obligation to notify former or present users of such revisions or changes.

### 1.1.2 Symbols

Symbols used in this manual:

## NOTE

Indicates something to be noted by the reader.

## ACAUTION

Indicates a general warning.

## $\triangle$ WARNING

Indicates a high-voltage warning.

[^0]
### 1.1.3 Available Literature for IVS 102

- Operating Instructions MG.12.Ex.yy provide the necessary information for getting the frequency converter up and running.
- Design Guide MG.12.Rx.yy entails all technical information about the frequency converter and customer design and applications.
- Programming Guide MG.12.Fx.yy provides information on how to programme and includes complete parameter descriptions.
$x=$ Revision number
yy = Language code

Armstrong technical literature is available in print from your local Armstrong Sales Office

### 1.1.4 Abbreviations and Standards

| Abbreviations: | Terms: | SI-units: | I-P units: |
| :---: | :---: | :---: | :---: |
| a | Acceleration | $\mathrm{m} / \mathrm{s}^{2}$ | $\mathrm{ft} / \mathrm{s}^{2}$ |
| AWG | American wire gauge |  |  |
| Auto Tune | Automatic Motor Tuning |  |  |
| ${ }^{\circ} \mathrm{C}$ | Celsius |  |  |
| 1 | Current | A | Amp |
| lıim | Current limit |  |  |
| Joule | Energy | $\mathrm{J}=\mathrm{N} \cdot \mathrm{m}$ | $\mathrm{ft}-\mathrm{lb}, \mathrm{Btu}$ |
| ${ }^{\circ} \mathrm{F}$ | Fahrenheit |  |  |
| FC | Frequency Converter |  |  |
| f | Frequency | Hz | Hz |
| kHz | Kilohertz | kHz | kHz |
| LCP | Local Control Panel |  |  |
| mA | Milliampere |  |  |
| ms | Millisecond |  |  |
| min | Minute |  |  |
| MCT | Motion Control Tool |  |  |
| M-TYPE | Motor Type Dependent |  |  |
| Nm | Newton Metres |  | in-lbs |
| $\mathrm{I}_{\mathrm{M}, \mathrm{N}}$ | Nominal motor current |  |  |
| $\mathrm{f}_{\mathrm{M}, \mathrm{N}}$ | Nominal motor frequency |  |  |
| $\mathrm{P}_{\mathrm{M}, \mathrm{N}}$ | Nominal motor power |  |  |
| UM, $^{\text {N }}$ | Nominal motor voltage |  |  |
| par. | Parameter |  |  |
| PELV | Protective Extra Low Voltage |  |  |
| Watt | Power | W | Btu/hr, hp |
| Pascal | Pressure | $\mathrm{Pa}=\mathrm{N} / \mathrm{m}^{2}$ | $\mathrm{psi}, \mathrm{psf}$, ft of water |
| linv | Rated Inverter Output Current |  |  |
| RPM | Revolutions Per Minute |  |  |
| SR | Size Related |  |  |
| T | Temperature | C | F |
| t | Time | s | s,hr |
| Tıı | Torque limit |  |  |
| U | Voltage | V | V |

Table 1.1 Abbreviation and standards table.

## 2 Safety

### 2.1.1 High Voltage Warning

## AWARNING

The voltage of the frequency converter and the MCO 101 option card is dangerous whenever it is connected to mains. Incorrect installation of the motor or frequency converter may causedeath, serious injury or damage to the equipment. Consequently, it is essential to comply with the instructions in this manual as well as local and national rules and safety regulations.

### 2.1.2 Safety Instructions

## AWARNING

Prior to using functions directly or indirectly influencing personal safety (e.g. Safe Stop, Fire Mode or other functions either forcing the motor to stop or attempting to keep it functioning) a thorough risk analysis and system test must be carried through. The system tests must include testing failure modes regarding the control signalling (analog and digital signals and serial communication.

## NOTE

Before using Fire Mode, contact Armstrong

- Make sure the frequency converter is properly connected to earth.
- Do not remove mains connections, motor connections or other power connections while the frequency converter is connected to power.
- Protect users against supply voltage.
- Protect the motor against overloading according to national and local regulations.
- $\quad$ The earth leakage current exceeds 3.5 mA .
- The [OFF] key is not a safety switch. It does not disconnect the frequency converter from mains.

### 2.1.3 General Warning

## AWARNING

## Warning:

Touching the electrical parts may be fatal - even after the equipment has been disconnected from mains.
Also make sure that other voltage inputs have been disconnected, (linkage of DC intermediate circuit), as well as the motor connection for kinetic back-up.
Before touching any potentially live parts of the frequency converter, wait at least as follows: Be aware that there may be high voltage on the DC link even when the Control Card LEDs are turned off. A red LED is mounted on a circuit board inside the drive to indicate the DC bus voltage. The red LED will stay lit until the DC link is 50 Vdc or lower.

| Voltage | Power size | Min. Waiting Time |
| :---: | :---: | :---: |
| 380-480 V | $\begin{gathered} 150-\text { N/A hp } \\ (110-250 \mathrm{~kW}) \end{gathered}$ | 20 minutes |
|  | $\begin{gathered} 400-1341 \mathrm{hp} \\ (315-1000 \mathrm{~kW}) \end{gathered}$ | 40 minutes |
| 525-690 V | $\begin{gathered} 60-536 \mathrm{hp} \\ (45-400 \mathrm{~kW}) \end{gathered}$ | 20 minutes |
|  | $\begin{aligned} & 603-1877 \mathrm{hp} \\ & 450-1400 \mathrm{~kW} \end{aligned}$ | 30 minutes |
| Be aware that there may be high voltage on the DC link even when the LEDs are turned off. |  |  |

## AWARNING

## Leakage Current

The earth leakage current from the frequency converter exceeds 3.5 mA . According to IEC 61800-5-1 a reinforced Protective Earth connection must be ensured by means of: a $\mathrm{min} .10 \mathrm{~mm}^{2} \mathrm{Cu}$ or $16 \mathrm{~mm}^{2}$ AI PE-wire or an addtional PE wire

- with the same cable cross section as the Mains wiring -
must be terminated separately.

## Residual Current Device

This product can cause a D.C. current in the protective conductor. Where a residual current device (RCD) is used for extra protection, only an RCD of Type B (time delayed) shall be used on the supply side of this product. See also RCD Application Note MN.90.GX.02.
Protective earthing of the frequency converter and the use of RCD's must always follow national and local regulations.

### 2.1.4 Before Commencing Repair Work

1. Disconnect the frequency converter from mains
2. Disconnect DC bus terminals 88 and 89
3. Wait at least the time mentioned in section General Warning above
4. Remove motor cable

### 2.1.5 Special Conditions

## Electrical ratings:

The rating indicated on the nameplate of the frequency converter is based on a typical 3-phase mains power supply, within the specified voltage, current and temperature range, which is expected to be used in most applications.

The frequency converters also support other special applications, which affect the electrical ratings of the frequency converter. Special conditions which affect the electrical ratings might be:

- Single phase applications
- High temperature applications which require de-rating of the electrical ratings
- Marine applications with more severe environmental conditions.

Other applications might also affect the electrical ratings.

Consult the relevant sections in this manual and in the for information about the electrical ratings.

## Installation requirements:

The overall electrical safety of the frequency converter requires special installation considerations regarding:

- Fuses and circuit breakers for over-current and short-circuit protection
- Selection of power cables (mains, motor, brake, loadsharing and relay)
- Grid configuration (grounded delta transformer leg, IT,TN, etc.)
- Safety of low-voltage ports (PELV conditions).

Consult the relevant clauses in these instructions and in the for information about the installation requirements.

### 2.1.6 Installation at High Altitudes (PELV)

## AWARNING

Installation at high altitude:
380-480 V: At altitudes above 3 km , please contact Armstrong regarding PELV.
525-690 V: At altitudes above 2 km , please contact Armstrong regarding PELV.

### 2.1.7 Avoid unintended start

## AWARNING

While the frequency converter is connected to mains, the motor can be started/stopped using digital commands, bus commands, references or via the Local Control Panel.

- Disconnect the frequency converter from mains whenever personal safety considerations make it necessary to avoid unintended start.
- To avoid unintended start, always activate the [OFF] key before changing parameters.
- Unless terminal 37 is turned off, an electronic fault, temporary overload, a fault in the mains supply, or lost motor connection may cause a stopped motor to start.

### 2.1.8 Safe Stop of the frequency converter

For versions fitted with a Safe Stop terminal 37 input, the frequency converter can perform the safety function Safe Torque Off (As defined by draft CD IEC 61800-5-2) or Stop Category 0 (as defined in EN 60204-1).

It is designed and approved suitable for the requirements of Safety Category 3 in EN 954-1. This functionality is called Safe Stop. Prior to integration and use of Safe Stop in an installation, a thorough risk analysis on the installation must be carried out in order to determine whether the Safe Stop functionality and safety category are appropriate and sufficient. In order to install and use the Safe Stop function in accordance with the requirements of Safety Category 3 in EN 954-1, the related information and instructions of the must be followed! The information and instructions of the Operating Instructions are not sufficient for a correct and safe use of the Safe Stop functionality!

### 2.1.9 IT Mains

## AWARNING

IT mains
Do not connect frequency converters with RFI-filters to mains supplies with a voltage between phase and earth of more than 440 V for 400 V converters and 760 V for 690 V converters.
For 400 V IT mains and delta earth (grounded leg), mains voltage may exceed 440 V between phase and earth. For 690 V IT mains and delta earth (grounded leg), mains voltage may exceed 760 V between phase and earth.

14-50 RFI Filter can be used to disconnect the internal RFI capacitors from the RFI filter to ground.
2.1.10 Software Version and Approvals: IVS 102

# IVS 102 <br>  

This manual can be used with all IVS 102 frequency converters with software version 3.2.x. The software version number can be seen from 15-43 Software Version.

### 2.1.11 Disposal Instruction

Equipment containing electrical components must not be disposed of together with domestic waste. It must be separately collected with electrical and electronic waste according to local and currently valid legislation.

## 3 Mechanical Installation

### 3.1 How to Get Started

### 3.1.1 About How to Install

This chapter covers mechanical and electrical installations to and from power terminals and control card terminals. Electrical installation of options is described in the relevant Operating Instructions and Design Guide.

### 3.1.2 How to Get Started

The frequency converter is designed to achieve a quick and EMC-correct installation by following the steps described below.

## AWARNING

Read the safety instructions before installing the unit.
Failure to follow recommendations could result in death or serious injury.

## Mechanical Installation

- Mechanical mounting

## Electrical Installation

- Connection to Mains and Protecting Earth
- Motor connection and cables
- Fuses and circuit breakers
- Control terminals - cables

## Quick Setup

- Local Control Panel, LCP
- Automatic Motor Adaptation, AMA
- Programming

Frame size is depending on enclosure type, power range and mains voltage.

### 3.2 Pre-installation

### 3.2.1 Planning the Installation Site

## ACAUTION

Before performing the installation it is important to plan the installation of the frequency converter. Neglecting this may result in extra work during and after installation.

Select the best possible operation site by considering the following (see details on the following pages, and the respective Design Guides):

- Ambient operating temperature
- Installation method
- How to cool the unit
- Position of the frequency converter
- Cable routing
- Ensure the power source supplies the correct voltage and necessary current
- Ensure that the motor current rating is within the maximum current from the frequency converter
- If the frequency converter is without built-in fuses, ensure that the external fuses are rated correctly.

### 3.2.2 Receiving the Frequency Converter

When receiving the frequency converter please make sure that the packaging is intact, and be aware of any damage that might have occurred to the unit during transport. In case damage has occurred, contact immediately the shipping company to claim the damage.

### 3.2.3 Transportation and Unpacking

Before unpacking the frequency converter it is recommended that it is located as close as possible to the final installation site. Remove the box and handle the frequency converter on the pallet, as long as possible.

## NOTE

The card box cover contains a drilling master for the mounting holes in the $D$ frames. For the E size, please refer to section Mechanical Dimensions later in this chapter.

Illustration 3.2 Mounting Template

### 3.2.4 Lifting

Always lift the frequency converter in the dedicated lifting eyes. For all D and E2 (IPO0) enclosures, use a bar to avoid bending the lifting holes of the frequency converter.

Illustration 3.3 Recommended lifting method, frame sizes $D$ and $E$.

## AWARNING

The lifting bar must be able to handle the weight of the frequency converter. See Mechanical Dimensions for the weight of the different frame sizes. Maximum diameter for bar is 2.5 cm ( 1 inch ). The angle from the top of the drive to the lifting cable should be $60^{\circ} \mathrm{C}$ or greater.

Illustration 3.5 Recommended lifting method, frame size F2.

Illustration 3.4 Recommended lifting method, frame size F1.

Illustration 3.6 Recommended lifting method, frame size F3.

## NOTE

Note the plinth is provided in the same packaging as the frequency converter but is not attached to frame sizes F1-F4 during shipment. The plinth is required to allow airflow to the drive to provide proper cooling. The F frames should be positioned on top of the plinth in the final installation location. The angle from the top of the drive to the lifting cable should be $60^{\circ} \mathrm{C}$ or greater.
In addition to the drawings above a spreader bar is an acceptable way to lift the F Frame.

Illustration 3.7 Recommended lifting method, frame size F4.

### 3.2.5 Mechanical Dimensions

* Please note airflow directions

## NOTE

The F frames have four different sizes, F1, F2, F3 and F4 The F1 and F2 consist of an inverter cabinet on the right and rectifier cabinet on the left. The F3 and F4 have an additional options cabinet left of the rectifier cabinet. The F3 is an F1 with an additional options cabinet. The F4 is an F2 with an additional options cabinet.

### 3.3 Mechanical Installation

Preparation of the mechanical installation of the frequency converter must be done carefully to ensure a proper result and to avoid additional work during installation. Start taking a close look at the mechanical drawings at the end of this instruction to become familiar with the space demands.

### 3.3.1 Tools Needed

To perform the mechanical installation the following tools are needed:

- Drill with 10 or 12 mm drill
- Tape measure
- Wrench with relevant metric sockets (7-17 mm)
- Extensions to wrench
- Sheet metal punch for conduits or cable glands in IP 21/Nema 1 and IP 54 units
- Lifting bar to lift the unit (rod or tube max. $\varnothing 25 \mathrm{~mm}$ (1 inch), able to lift minimum $400 \mathrm{~kg}(880 \mathrm{lbs})$ ).
- Crane or other lifting aid to place the frequency converter in position
- A Torx T50 tool is needed to install the E1 in IP21 and IP54 enclosure types.

### 3.3.2 General Considerations

## Space

Ensure proper space above and below the frequency converter to allow airflow and cable access. In addition space in front of the unit must be considered to enable opening of the door of the panel.

Illustration 3.8 Space in front of IP21/IP54 enclosure type, frame size D1 and D2 .

Illustration 3.9 Space in front of IP21/IP54 enclosure type, frame size E1.

Illustration 3.10 Space in front of IP21/IP54 enclosure type, frame size F1

Illustration 3.11 Space in front of IP21/IP54 enclosure type, frame size F3

Illustration 3.12 Space in front of IP21/IP54 enclosure type, frame size F2

Illustration 3.13 Space in front of IP21/IP54 enclosure type, frame
size F4

## Wire access

Ensure that proper cable access is present including necessary bending allowance. As the IP00 enclosure is open to the bottom cables must be fixed to the back panel of the enclosure where the frequency converter is mounted, i.e. by using cable clamps.

## NOTE

All cable lugs/ shoes must mount within the width of the terminal bus bar.

### 3.3.3 Terminal Locations - Frame size $D$

Take the following position of the terminals into consideration when you design for cables access.

Illustration 3.14 Position of power connections, frame size D3 and D4

Illustration 3.15 Position of power connections with disconnect switch, frame size D1 and D2

Be aware that the power cables are heavy and hard to bend. Consider the optimum position of the frequency converter for ensuring easy installation of the cables.

## NOTE

All D frames are available with standard input terminals or disconnect switch. All terminal dimensions can be found in the following table.

|  | IP 21 (NEMA 1) / IP 54 (NEMA 12) |  | IP 00 / Chassis |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Frame size D1 | Frame size D2 | Frame size D3 | Frame size D4 |
| A | 277 (10.9) | 379 (14.9) | 119 (4.7) | 122 (4.8) |
| B | 227 (8.9) | 326 (12.8) | 68 (2.7) | 68 (2.7) |
| C | 173 (6.8) | 273 (10.8) | 15 (0.6) | 16 (0.6) |

Table 3.2 Dimension for terminal

### 3.3.6 Cooling and Airflow

## Cooling

Cooling can be obtained in different ways, by using the cooling ducts in the bottom and the top of the unit, by taking air in and out the back of the unit or by combining the cooling possibilities.

## Duct cooling

A dedicated option has been developed to optimize installation of IP00/chassis frequency converters in Rittal TS8 enclosures utilizing the fan of the frequency converter for forced air cooling of the backchannel. The air out the top of the enclosure could but ducted outside a facility so the heat loses from the backchannel are not dissipated within the control room reducing airconditioning requirements of the facility.
Please see Installation of Duct Cooling Kit in Rittal enclosures, for further information.

## Back cooling

The backchannel air can also be ventilated in and out the back of a Rittal TS8 enclosure. This offers a solution where the backchannel could take air from outside the facility and return the heat loses outside the facility thus reducing air-conditioning requirements.

## NOTE

A door fan(s) is required on the enclosure to remove the heat losses not contained in the backchannel of the drive and any additional losses generated from other components installed inside the enclosure. The total required air flow must be calculated so that the appropriate fans can be selected. Some enclosure manufacturers offer software for performing the calculations (i.e. Rittal Therm software). If the drive is the only heat generating component in the enclosure, the minimum airflow required at an ambient temperature of $45^{\circ} \mathrm{C}$ for the D3 and D4 drives is $391 \mathrm{~m}^{3} / \mathrm{h}$ ( 230 cfm ). The minimum airflow required at an ambient temperature of $45^{\circ} \mathrm{C}$ for the E 2 drive is $782 \mathrm{~m}^{3} / \mathrm{h}(460 \mathrm{cfm})$.

## Airflow

The necessary airflow over the heat sink must be secured. The flow rate is shown below.

| Enclosure protection | Frame size | Door fan(s) / Top fan airflow | Heatsink fan(s) |
| :---: | :---: | :---: | :---: |
| IP21 / NEMA 1 | D1 and D2 | $170 \mathrm{~m}^{3} / \mathrm{h}$ (100 cfm) | $765 \mathrm{~m}^{3} / \mathrm{h}$ (450 cfm) |
| IP54 / NEMA 12 | E1 P315T5, P450T7, P500T7 | $340 \mathrm{~m}^{3} / \mathrm{h}(200 \mathrm{cfm})$ | $1105 \mathrm{~m}^{3} / \mathrm{h}$ (650 cfm) |
|  | E1 P355-P450T5, P560-P630T7 | $340 \mathrm{~m}^{3} / \mathrm{h}(200 \mathrm{cfm})$ | $1445 \mathrm{~m}^{3} / \mathrm{h}(850 \mathrm{cfm})$ |
| IP21 / NEMA 1 | F1, F2, F3 and F4 | $700 \mathrm{~m}^{3} / \mathrm{h}(412 \mathrm{cfm})^{*}$ | $985 \mathrm{~m}^{3} / \mathrm{h}(580 \mathrm{cfm})^{*}$ |
| IP54 / NEMA 12 | F1, F2, F3 and F4 | $525 \mathrm{~m}^{3} / \mathrm{h}(309 \mathrm{cfm})^{*}$ | $985 \mathrm{~m}^{3} / \mathrm{h}(580 \mathrm{cfm})^{*}$ |
| IP00 / Chassis | D3 and D4 | $255 \mathrm{~m}^{3} / \mathrm{h}$ (150 cfm) | $765 \mathrm{~m}^{3} / \mathrm{h}(450 \mathrm{cfm})$ |
|  | E2 P315T5, P450T7, P500T7 | $255 \mathrm{~m}^{3} / \mathrm{h}$ (150 cfm) | $1105 \mathrm{~m}^{3} / \mathrm{h}$ (650 cfm) |
|  | E2 P355-P450T5, P560-P630T7 | $255 \mathrm{~m}^{3} / \mathrm{h}$ (150 cfm) | $1445 \mathrm{~m}^{3} / \mathrm{h}$ (850 cfm) |
| * Airflow per fan. Fra | tain multiple fans. |  |  |

Table 3.3 Heatsink Air Flow

## External ducts

If additional duct work is added externally to the Rittal cabinet the pressure drop in the ducting must be calculated. Use the charts below to derate the frequency converter according to the pressure drop.

Illustration 3.30 D frame Derating vs. Pressure Change
Drive air flow: $450 \mathrm{cfm}\left(765 \mathrm{~m}^{3} / \mathrm{h}\right)$

Illustration 3.31 E frame Derating vs. Pressure Change (Small Fan), P315T5 and P450T7-P500T7
Drive air flow: $650 \mathrm{cfm}\left(1105 \mathrm{~m}^{3} / \mathrm{h}\right)$

Illustration 3.32 E frame Derating vs. Pressure Change (Large Fan), P355T5-P450T5 and P560T7-P630T7 Drive air flow: $850 \mathrm{cfm}\left(1445 \mathrm{~m}^{3} / \mathrm{h}\right)$

Illustration 3.33 F1, F2, F3, F4 frame Derating vs. Pressure Change
Drive air flow: $580 \mathrm{cfm}\left(985 \mathrm{~m}^{3} / \mathrm{h}\right)$

### 3.3.7 Installation on the Wall - IP21 (NEMA 1) and IP54 (NEMA 12) Units

This only applies to frame sizes D1 and D2. It must be considered where to install the unit.

Take the relevant points into consideration before you select the final installation site:

- Free space for cooling
- Access to open the door
- Cable entry from the bottom

Mark the mounting holes carefully using the mounting template on the wall and drill the holes as indicated. Ensure proper distance to the floor and the ceiling for cooling. A minimum of 225 mm ( 8.9 inch ) below the frequency converter is needed. Mount the bolts at the bottom and lift the frequency converter up on the bolts. Tilt the frequency converter against the wall and mount the upper bolts. Tighten all four bolts to secure the frequency converter against the wall.

Illustration 3.34 Lifting method for mounting drive on wall

### 3.3.8 Gland/Conduit Entry - IP21 (NEMA 1) and IP54 (NEMA12)

Cables are connected through the gland plate from the bottom. Remove the plate and plan where to place the entry for the glands or conduits. Prepare holes in the marked area on the drawing.

## NOTE

The gland plate must be fitted to the frequency converter to ensure the specified protection degree, as well as ensuring proper cooling of the unit. If the gland plate is not mounted, the frequency converter may trip on Alarm 69, Pwr. Card Temp

Illustration 3.35 Example of proper installation of the gland plate.

## Frame size F2

Frame size F3

Frame size F4

F1-F4: Cable entries viewed from the bottom of the frequency converter - 1) Place conduits in marked areas

Illustration 3.36 Mounting of bottom plate,frame size E1.

The bottom plate of the E1 can be mounted from either in- or outside of the enclosure, allowing flexibility in the installation process, i.e. if mounted from the bottom the glands and cables can be mounted before the frequency converter is placed on the pedestal.

### 3.3.9 IP21 Drip Shield Installation (Frame size D1 and D2)

To comply with the IP21 rating, a separate drip shield is to be installed as explained below:

- Remove the two front screws
- Insert the drip shield and replace screws
- Torque the screws to $5,6 \mathrm{Nm}$ ( 50 in -lbs)

[^1]
### 3.4 Field Installation of Options

### 3.4.1 Installation of Duct Cooling Kit in Rittal Enclosures

This section deals with the installation of IPOO / chassis enclosed frequency converters with duct work cooling kits in Rittal enclosures. In addition to the enclosure a 200 mm base/plinth is required.

Illustration 3.38 Installation of IP00 in Rittal TS8 enclosure.

The minimum enclosure dimension is:

- D3 and D4 frame: Depth 500 mm and width 600 mm .
- E2 frame: Depth 600 mm and width 800 mm .

The maximum depth and width are as required by the installation. When using multiple frequency converters in one enclosure it is recommended that each drive is mounted on its own back panel and supported along the mid-section of the panel. These duct work kits do not support the "in frame" mounting of the panel (see Rittal TS8 catalogue for details). The duct work cooling kits listed in the table below are suitable for use only with IP 00 / Chassis frequency converters in Rittal TS8 IP 20 and UL and NEMA 1 and IP 54 and UL and NEMA 12 enclosures.

## NOTE

For the E2 frames it is important to mount the plate at the absolute rear of the Rittal enclosure due to the weight of the frequency converter.

## NOTE

A doorfan(s) is required on the enclosure to remove the heat losses not contained in the backchannel of the drive and any additional losses generated from other components installed inside the enclosure. The total required air flow must be calculated so that the appropriate fans can be selected. Some enclosure manufacturers offer software for performing the calculations (i.e. Rittal Therm software). If the drive is the only heat generating component in the enclosure, the minimum airflow required at an ambient temperature of $45^{\circ} \mathrm{C}$ for the D3 and D4 drives is $391 \mathrm{~m}^{3} / \mathrm{h}$ ( 230 cfm ). The minimum airflow required at an ambient temperature of $45^{\circ} \mathrm{C}$ for the E 2 drive is $782 \mathrm{~m}^{3} / \mathrm{h}(460 \mathrm{cfm}$ ).

Ordering Information

| Rittal TS-8 Enclosure | Frame D3 Kit Part No. | Frame D4Kit Part No. | Frame E2 Part No. |
| :--- | :--- | :--- | :--- |
| 1800 mm | 176F1824 | 176F1823 | Not possible |
| 2000 mm | $176 F 1826$ | 176 F1825 | 176 F 1850 |
| 2200 mm |  |  | $176 \mathrm{F0299}$ |

## NOTE

Please see the Duct Kit Instruction Manual, 175R5640, for
further information

## External ducts

If additional duct work is added externally to the Rittal cabinet the pressure drop in the ducting must be calculated. Please see section Cooling and Airflow for further information.

### 3.4.2 Installation of Top-only Duct Cooling Kit

This description is for the installation of the top section only of the back-channel cooling kits available for frame sizes D3, D4 and E2. In addition to the enclosure a 200 mm vented pedestal is required.
The minimum enclosure depth is 500 mm ( 600 mm for E 2 frame) and the minimum enclosure width is 600 mm ( 800 mm for E2 frame). The maximum depth and width are as required by the installation. When using multiple frequency converters in one enclosure mount each drive on its own back panel and support along the mid-section of the panel. The back-channel cooling kits are very similar in construction for all frames. The D3 and D4 kits do not support "in frame" mounting of the frequency converters. The E2 kit is mounted "in frame" for additional support of the frequency converter.
Using these kits as described removes $85 \%$ of the losses via the back channel using the drive's main heat sink fan. The remaining $15 \%$ must be removed via the door of the enclosure.

## NOTE

Please see the Top-Only Back-Channel Cooling Kit Instruction, 175R1107, for further information.

## Ordering information

Frame size D3 and D4: 176F1775
Frame size E2: 176F1776

### 3.4.3 Installation of Top and Bottom Covers for Rittal Enclosures

The top and bottom covers, installed onto IP00 frequency converters, direct the heat sink cooling air in and out the back of the frequency converter. The kits are applicable to IP00 drive frames D3, D4 and E2. These kits are designed and tested to be used with IP00/Chassis drives in Rittal TS8 enclosures.

## Notes:

1. If external duct work is added to the exhaust path of the drive, additional back pressure will be created that will reduce the cooling of the drive. The drive must be derated to accommodate the reduced cooling. First, the pressure drop must be calculated, then refer to the derating tables located earlier in this section.
2. A doorfan(s) is required on the enclosure to remove the heat losses not contained in the backchannel of the drive and any additional losses generated from other components installed inside the enclosure. The total required air flow must be calculated so that the appropriate fans can be selected. Some enclosure manufacturers offer software for performing the calculations (i.e. Rittal Therm software).
If the frequency converter is the only heat generating component in the enclosure, the minimum airflow required at an ambient temperature of $45^{\circ} \mathrm{C}$ for the D3 and D4 frame drives is $391 \mathrm{~m}^{3} / \mathrm{h}(230 \mathrm{cfm})$. The minimum airflow required at an ambient temperature of $45^{\circ} \mathrm{C}$ for the E2 frame drive is $782 \mathrm{~m}^{3} / \mathrm{h}(460 \mathrm{cfm})$.

## NOTE

Please see the instruction for Top and Bottom Covers - Rittal
Enclosure, 177R0076, for further information.

Ordering information
Frame size D3: 176F1781
Frame size D4: 176F1782
Frame size E2: 176F1783

### 3.4.4 Installation of Top and Bottom Covers

Top and bottom covers can be installed on frame sizes D3, D4 and E2. These kits are designed to be used to direct the backchannel airflow in and out the back of the drive as opposed to in the bottom and out the top of the drive (when the drives are being mounted directly on a wall or inside a welded enclosure).

## Notes:

1. If external duct work is added to the exhaust path of the drive, additional back pressure will be created that will reduce the cooling of the drive. The drive must be derated to accommodate the reduced cooling. First, the pressure drop must be calculated, then refer to the derating tables located earlier in this section.
2. A doorfan(s) is required on the enclosure to remove the heat losses not contained in the backchannel of the drive and any additional losses generated from other components installed inside the enclosure. The total required air flow must be calculated so that the appropriate fans can be selected. Some enclosure manufacturers offer software for performing the calculations (i.e. Rittal Therm software).
If the frequency converter is the only heat generating component in the enclosure, the minimum airflow required at an ambient temperature of $45^{\circ} \mathrm{C}$ for the D3 and D4 frame drives is $391 \mathrm{~m}^{3} / \mathrm{h}(230 \mathrm{cfm})$. The minimum airflow required at an ambient temperature of $45^{\circ} \mathrm{C}$ for the E2 frame drive is $782 \mathrm{~m}^{3} / \mathrm{h}(460 \mathrm{cfm})$.

## NOTE

Please see theTop and Bottom Covers Only Instruction, 175R1106, for further information.

### 3.4.5 Outside Installation/ NEMA 3R Kit for Rittal Enclosures

This section is for the installation of NEMA 3R kits available for the frequency converter frames D3, D4 and E2. These kits are designed and tested to be used with IP00/ Chassis versions of these frames in Rittal TS8 NEMA 3R or NEMA 4 enclosures. The NEMA-3R enclosure is an outdoor enclosure that provides a degree of protection against rain and ice. The NEMA-4 enclosure is an outdoor enclosure that provides a greater degree of protection against weather and hosed water.
The minimum enclosure depth is 500 mm ( 600 mm for E2 frame) and the kit is designed for a 600 mm ( 800 mm for E2 frame) wide enclosure. Other enclosure widths are possible, however additional Rittal hardware is required. The maximum depth and width are as required by the installation.

## NOTE

The current rating of drives in D3 and D4 frames are de-rated by $3 \%$, when adding the NEMA 3R kit. Drives in E2 frames require no derating.

## NOTE

A doorfan(s) is required on the enclosure to remove the heat losses not contained in the backchannel of the drive and any additional losses generated from other components installed inside the enclosure. The total required air flow must be calculated so that the appropriate fans can be selected. Some enclosure manufacturers offer software for performing the calculations (i.e. Rittal Therm software). If the drive is the only heat generating component in the enclosure, the minimum airflow required at an ambient temperature of $45^{\circ} \mathrm{C}$ for the D3 and D4 drives is $391 \mathrm{~m}^{3} / \mathrm{h}(230 \mathrm{cfm})$. The minimum airflow required at an ambient temperature of $45^{\circ} \mathrm{C}$ for the E2 drive is $782 \mathrm{~m}^{3} / \mathrm{h}(460 \mathrm{cfm})$.

## Ordering information

Frame size D3: 176F4600
Frame size D4: 176F4601
Frame size E2: 176F1852

## NOTE

Please see the instructions $175 R 5922$ for further information.

### 3.4.6 Outside Installation /NEMA 3R Kit of Industrial Enclosures

The kits are available for the frame sizes D3, D4 and E2. These kits are designed and tested to be used with IP00/Chassis drives in welded box construction enclosures with an environmental rating of NEMA-3R or NEMA-4. The NEMA-3R enclosure is a dust tight, rain tight, ice resistant, outdoor enclosure. The NEMA-4 enclosure is a dust tight and water tight enclosure.
This kit has been tested and complies with UL environmental rating Type-3R.
Note: The current rating of D3 and D4 frame drives are de-rated by $3 \%$ when installed in a NEMA- 3R enclosure. E2 frame drives require no de-rating when installed in a NEMA-3R enclosure.

## NOTE

Please see the instruction forOutside Installation /NEMA 3R kit of industrial enclosures, 175R1068, for further information.

## Ordering information

Frame size D3: 176F0296
Frame size D4: 176F0295
Frame size E2: 176F0298

### 3.4.7 Installation of IP00 to IP20 Kits

The kits can be installed on frame sizes D3, D4, and E2 (IP00).

## NOTE

Please see the instruction for Installation of IP20 Kits, 175R1108, for further information.

## Ordering information

Frame size D3/D4: 176F1779
Frame size E2: 176FXXXX

### 3.4.8 Installation of IP00s D3, D4, \& E2 Cable Clamp Bracket

The motor cable clamp brackets can be installed on frame sizes D3 and D4 (IP00).

## NOTE

Please see the instruction forCable Clamp Bracket Kit, 175R1109, for further information.

## Ordering information

Frame size D3: 176F1774
Frame size D4: 176F1746
Frame size E2: 176F1745

### 3.4.9 Installation on Pedestal

This section describes the installation of a pedestal unit available for the frequency converters frames D1 and D2. This is a 200 mm high pedestal that allows these frames to be floor mounted. The front of the pedestal has openings for input air to the power components.

The frequency converter gland plate must be installed to provide adequate cooling air to the control components of the frequency converter via the door fan and to maintain the IP21/NEMA 1 or IP54/NEMA 12 degrees of enclosure protections.

Illustration 3.39 Drive on pedestal

There is one pedestal that fits both frames D1 and D2. Its ordering number is 176F1827. The pedestal is standard for E1 frame.

Illustration 3.40 Mounting of drive to pedestal.

## NOTE

Please see the Pedestal Kit Instruction Manual, 175R5642, for further information.

### 3.4.10 Installation of Mains Shield for Frequency Converters

This section is for the installation of a mains shield for the frequency converter series with D1, D2 and E1 frames. It is not possible to install in the IPOO/ Chassis versions as these have included as standard a metal cover. These shields satisfy VBG-4 requirements.

## Ordering numbers:

Frames D1 and D2: 176F0799
Frame E1: 176F1851

## NOTE

For further information, please see the Instruction Sheet, 175R5923

### 3.4.11 F Frame USB Extension Kit

A USB extension cable can be installed into the door of F frame VLT frequency converters.

Ordering number:
176F1784

## NOTE

For further information, please see the Instruction Sheet, 177 R0091

### 3.4.12 Installation of Input Plate Options

This section is for the field installation of input option kits available for frequency converters in all $D$ and $E$ frames.
Do not attempt to remove RFI filters from input plates. Damage may occur to RFI filters if they are removed from the input plate.

## NOTE

Where RFI filters are available, there are two different type of RFI filters depending on the input plate combination and the RFI filters interchangeable. Field installable kits in certain cases are the same for all voltages.

|  | $\begin{aligned} & 380-480 \mathrm{~V} \\ & 380-500 \mathrm{~V} \end{aligned}$ | Fuses | Disconnect Fuses | RFI | RFI Fuses | RFI Disconnect Fuses |

## NOTE

For further information, please see the Instruction Sheet, 175R5795

### 3.4.13 Installation of D or E Loadshare Option

The loadshare option can be installed on frame sizes D1, D2, D3, D4, E1 and E2.

## NOTE

Please see the Loadshare Terminal Kit Instructions, 175R5637
(D frames) or 177R1114 (E frames), for further information.

## Ordering information

Frame size D1/D3: 176F8456
Frame size D2/D4: 176F8455
Frame size E1/E2: 176F1843

### 3.5 Frame size F Panel Options

## Space Heaters and Thermostat

Mounted on the cabinet interior of frame size F frequency converters, space heaters controlled via automatic thermostat help control humidity inside the enclosure, extending the lifetime of drive components in damp environments. The thermostat default settings turn on the heaters at $10^{\circ} \mathrm{C}\left(50^{\circ} \mathrm{F}\right)$ and turn them off at $15.6^{\circ} \mathrm{C}\left(60^{\circ} \mathrm{F}\right)$.

## Cabinet Light with Power Outlet

A light mounted on the cabinet interior of frame size F frequency converters increase visibility during servicing and maintenance. The housing the light includes a power outlet for temporarily powering tools or other devices, available in two voltages:

- 230V, 50Hz, 2.5A, CE/ENEC
- $120 \mathrm{~V}, 60 \mathrm{~Hz}, 5 \mathrm{~A}, \mathrm{UL} / \mathrm{cUL}$

## Transformer Tap Setup

If the Cabinet Light \& Outlet and/or the Space Heaters \& Thermostat are installed Transformer T1 requires it taps to be set to the proper input voltage. A $380-480 / 500 \mathrm{~V} 380-480 \mathrm{~V}$ drive will initially be set to the 525 V tap and a $525-690 \mathrm{~V}$ drive will be set to the 690 V tap to insure no over-voltage of secondary equipment occurs if the tap is not changed prior to power being applied. See the table below to set the proper tap at terminal T 1 located in the rectifier cabinet. For location in the drive, see illustration of rectifier in the Power Connections section.

| Input Voltage Range | Tap to Select |
| :--- | :--- |
| $380 \mathrm{~V}-440 \mathrm{~V}$ | 400 V |
| $441 \mathrm{~V}-490 \mathrm{~V}$ | 460 V |
| $491 \mathrm{~V}-550 \mathrm{~V}$ | 525 V |
| $551 \mathrm{~V}-625 \mathrm{~V}$ | 575 V |
| $626 \mathrm{~V}-660 \mathrm{~V}$ | 660 V |
| $661 \mathrm{~V}-690 \mathrm{~V}$ | 690 V |

## NAMUR Terminals

NAMUR is an international association of automation technology users in the process industries, primarily chemical and pharmaceutical industries in Germany. Selection of this option provides terminals organized and labeled to the specifications of the NAMUR standard for drive input and output terminals. This requires MCB 112 PTC Thermistor Card and MCB 113 Extended Relay Card.

## RCD (Residual Current Device)

Uses the core balance method to monitor ground fault currents in grounded and high-resistance grounded systems (TN and $\Pi$ systems in IEC terminology). There is a pre-warning ( $50 \%$ of main alarm set-point) and a main alarm set-point. Associated with each set-point is an SPDT alarm relay for external use. Requires an external "window-type" current transformer (supplied and installed by customer).

- Integrated into the drive's safe-stop circuit
- IEC 60755 Type B device monitors AC, pulsed DC, and pure DC ground fault currents
- LED bar graph indicator of the ground fault current level from $10-100 \%$ of the set-point
- Fault memory
- TEST / RESET button

## Insulation Resistance Monitor (IRM)

Monitors the insulation resistance in ungrounded systems (IT systems in IEC terminology) between the system phase conductors and ground. There is an ohmic pre-warning and a main alarm set-point for the insulation level. Associated with each set-point is an SPDT alarm relay for external use. Note: only one insulation resistance monitor can be connected to each ungrounded (IT) system.

- Integrated into the drive's safe-stop circuit
- LCD display of the ohmic value of the insulation resistance
- Fault Memory
- INFO, TEST, and RESET buttons

## IEC Emergency Stop with Pilz Safety Relay

Includes a redundant 4-wire emergency-stop push-button mounted on the front of the enclosure and a Pilz relay that monitors it in conjunction with the drive's safe-stop circuit and the mains contactor located in the options cabinet.

## Manual Motor Starters

Provide 3-phase power for electric blowers often required for larger motors. Power for the starters is provided from the load side of any supplied contactor, circuit breaker, or disconnect switch. Power is fused before each motor starter, and is off when the incoming power to the drive is off. Up to two starters are allowed (one if a 30A, fuse-protected circuit is ordered). Integrated into the drive's safe-stop circuit.
Unit features include:

- Operation switch (on/off)
- Short-circuit and overload protection with test function
- Manual reset function

## 30 Ampere, Fuse-Protected Terminals

- 3-phase power matching incoming mains voltage for powering auxiliary customer equipment
- Not available if two manual motor starters are selected
- Terminals are off when the incoming power to the drive is off
- Power for the fused protected terminals will be provided from the load side of any supplied contactor, circuit breaker, or disconnect switch.

## 24 VDC Power Supply

- $5 \mathrm{amp}, 120 \mathrm{~W}, 24 \mathrm{VDC}$
- Protected against output over-current, overload, short circuits, and over-temperature
- For powering customer-supplied accessory devices such as sensors, PLC I/O, contactors, temperature probes, indicator lights, and/or other electronic hardware
- Diagnostics include a dry DC-ok contact, a green DC-ok LED, and a red overload LED

## External Temperature Monitoring

Designed for monitoring temperatures of external system components, such as the motor windings and/or bearings. Includes eight universal input modules plus two dedicated thermistor input modules. All ten modules are integrated into the drive's safe-stop circuit and can be monitored via a fieldbus network (requires the purchase of a separate module/bus coupler).

## Universal inputs (8)

Signal types:

- RTD inputs (including Pt100), 3-wire or 4-wire
- Thermocouple
- Analog current or analog voltage

Additional features:

- One universal output, configurable for analog voltage or analog current
- Two output relays (N.O.)
- Dual-line LC display and LED diagnostics
- Sensor lead wire break, short-circuit, and incorrect polarity detection
- Interface setup software

## Dedicated thermistor inputs (2)

Features:

- Each module capable of monitoring up to six thermistors in series
- Fault diagnostics for wire breakage or short-circuits of sensor leads
- ATEX/UL/CSA certification
- A third thermistor input can be provided by the PTC Thermistor Option Card MCB 112, if necessary

## 4 Electrical Installation

### 4.1 Electrical Installation

### 4.1.1 Power Connections

Cabling and Fusing
NOTE
Cables General
All cabling must comply with national and local regulations on cable cross-sections and ambient temperature. UL applications require $75^{\circ} \mathrm{C}$ copper conductors. 75 and $90^{\circ} \mathrm{C}$ copper conductors are thermally acceptable for the frequency converter to use in non UL applications.

The power cable connections are situated as shown below. Dimensioning of cable cross section must be done in accordance with the current ratings and local legislation. See the Specifications section for details.

For protection of the frequency converter, the recommended fuses must be used or the unit must be with built-in fuses. Recommended fuses can be seen in the tables of the fuse section. Always ensure that proper fusing is made according to local regulation.

The mains connection is fitted to the mains switch if this is included.

## $\stackrel{\circ}{\circ}$ NOTE

The motor cable must be screened/armoured. If an unscreened/unarmoured cable is used, some EMC requirements are not complied with. Use a screened/ armoured motor cable to comply with EMC emission specifications. For more information, see EMC specifications in the Design Guide.

See section General Specifications for correct dimensioning of motor cable cross-section and length.

## Screening of cables:

Avoid installation with twisted screen ends (pigtails). They spoil the screening effect at higher frequencies. If it is necessary to break the screen to install a motor isolator or motor contactor, the screen must be continued at the lowest possible HF impedance.

Connect the motor cable screen to both the de-coupling plate of the frequency converter and to the metal housing of the motor.

Make the screen connections with the largest possible surface area (cable clamp). This is done by using the supplied installation devices within the frequency converter.
Cable-length and cross-section:
The frequency converter has been EMC tested with a given length of cable. Keep the motor cable as short as possible to reduce the noise level and leakage currents.

## Switching frequency:

When frequency converters are used together with Sine-wave filters to reduce the acoustic noise from a motor, the switching frequency must be set according to the instruction in 14-01 Switching Frequency.

${ }^{1)}$ Protected Earth Connection

## NOTE

In motors without phase insulation paper or other insulation reinforcement suitable for operation with voltage supply (such as a frequency converter), fit a Sine-wave filter on the output of the frequency converter.

### 4.1.2 Earthing

The following basic issues need to be considered when installing a frequency converter, so as to obtain electromagnetic compatibility (EMC).

- Safety earthing: Please note that the frequency converter has a high leakage current and must be earthed appropriately for safety reasons. Apply local safety regulations.
- High-frequency earthing: Keep the earth wire connections as short as possible.

Connect the different earth systems at the lowest possible conductor impedance. The lowest possible conductor impedance is obtained by keeping the conductor as short as possible and by using the greatest possible surface area.
The metal cabinets of the different devices are mounted on the cabinet rear plate using the lowest possible HF impedance. This avoids having different HF voltages for the individual devices and avoids the risk of radio interference currents running in connection cables that may be used between the devices. The radio interference will have been reduced.
In order to obtain a low HF impedance, use the fastening bolts of the devices as HF connection to the rear plate. It is necessary to remove insulating paint or similar from the fastening points.

### 4.1.3 Extra Protection (RCD)

ELCB relays, multiple protective earthing or earthing can be used as extra protection, provided that local safety regulations are complied with.

In the case of an earth fault, a DC component may develop in the fault current.

If ELCB relays are used, local regulations must be observed. Relays must be suitable for protection of 3-phase equipment with a bridge rectifier and for a brief discharge on power-up.

See also the section Special Conditions in the Design Guide.

### 4.1.4 RFI Switch

## Mains supply isolated from earth

If the frequency converter is supplied from an isolated mains source ( IT mains, floating delta and grounded delta) or TT/TN-S mains with grounded leg, the RFI switch is recommended to be turned off (OFF) ${ }^{1)}$ via 14-50 RFI Filter. For further reference, see IEC 364-3. In case optimum EMC performance is needed, parallel motors are connected or the motor cable length is above 25 m , it is recommended to set $14-50$ RFI Filter to [ON].
${ }^{1)}$ Not available for $525-600 / 690 \mathrm{~V}$ frequency converters in frame sizes $D, E$ and $F$.
In OFF, the internal RFI capacities (filter capacitors) between the chassis and the intermediate circuit are cut off to avoid damage to the intermediate circuit and to reduce the earth capacity currents (according to IEC 61800-3).
Please also refer to the application note VLT on IT mains, MN.90.CX.02. It is important to use isolation monitors that are capable for use together with power electronics (IEC 61557-8).

### 4.1.5 Torque

When tightening all electrical connections it is very important to tighten with the correct torque. Too low or too high torque results in a bad electrical connection. Use a torque wrench to ensure correct torque

| Frame size | Terminal | Torque | Bolt size |
| :---: | :---: | :---: | :---: |
| D1, D2, D3 and D4 | Mains | 19 Nm (168 in-lbs) | M10 |
|  | Motor |  |  |
|  | Load sharing Brake | 9.5 Nm (84 in-lbs) | M8 |
| E1 and E2 | Mains | 19 NM (168 in-lbs) | M10 |
|  | Motor |  |  |
|  | Load sharing |  |  |
|  | Brake | 9.5 Nm (84 in-lbs) | M8 |
| F1, F2, F3 and F4 | Mains | 19 Nm (168 in-lbs) | M10 |
|  | Motor |  |  |
|  | Load sharing | 19 Nm (168 in-lbs) | M10 |
|  | Brake | 9.5 Nm (84 in-lbs) | M8 |
|  | Regen | 19 Nm (168 in-lbs) | M10 |

Table 4.1 Torque for terminals

### 4.1.6 Shielded Cables

It is important that shielded and armoured cables are connected in a proper way to ensure high EMC immunity and low emissions.

## Connection can be made using either cable glands or clamps:

- EMC cable glands: Generally available cable glands can be used to ensure an optimum EMC connection.
- EMC cable clamp: Clamps allowing easy connection are supplied with the frequency converter.

### 4.1.7 Motor Cable

The motor must be connected to terminals $\mathrm{U} / \mathrm{T} 1 / 96, \mathrm{~V} / \mathrm{T} 2 / 97, \mathrm{~W} / \mathrm{T} 3 / 98$. Earth to terminal 99 . All types of three-phase asynchronous standard motors can be used with a frequency converter unit. The factory setting is for clockwise rotation with the frequency converter output connected as follows:

| Terminal No. | Function |
| :--- | :--- |
| $96,97,98,99$ | Mains U/T1, V/T2, W/T3 |
|  | Earth |

| - Terminal $\mathrm{U} / \mathrm{T} 1 / 96$ connected to U -phase |
| :--- |
| - Terminal $\mathrm{V} / \mathrm{T} 2 / 97$ connected to V -phase |
| - Terminal $\mathrm{W} / \mathrm{T} 3 / 98$ connected to W -phase |

The direction of rotation can be changed by switching two
phases in the motor cable or by changing the setting of
4-10 Motor Speed Direction.
Motor rotation check can be performed using 1-28 Motor Rotation Check and following the steps shown in the display.

## F frame Requirements

F1/F3 requirements: Motor phase cable quantities must be multiples of 2 , resulting in $2,4,6$, or 8 ( 1 cable is not allowed) to obtain equal amount of wires attached to both inverter module terminals. The cables are required to be equal length within $10 \%$ between the inverter module terminals and the first common point of a phase. The recommended common point is the motor terminals.

F2/F4 requirements: Motor phase cable quantities must be multiples of 3, resulting in 3, 6, 9, or 12 ( 1 or 2 cables are not allowed) to obtain equal amount of wires attached to each inverter module terminal. The wires are required to be equal length within $10 \%$ between the inverter module terminals and the first common point of a phase. The recommended common point is the motor terminals.

Output junction box requirements: The length, minimum 2.5 meters, and quantity of cables must be equal from each inverter module to the common terminal in the junction box.

### 4.1.8 Brake Cable Drives with Factory Installed Brake Chopper Option

(Only standard with letter B in position 18 of typecode).

The connection cable to the brake resistor must be screened and the max. length from frequency converter to the DC bar is limited to 25 metres ( 82 feet).

| Terminal No. | Function |
| :--- | :--- |
| 81,82 | Brake resistor terminals |

The connection cable to the brake resistor must be screened. Connect the screen by means of cable clamps to the conductive back plate at the frequency converter and to the metal cabinet of the brake resistor.
Size the brake cable cross-section to match the brake torque. See also Brake Instructions, MI.90.Fx.yy and MI.50.Sx.yy for further information regarding safe installation.

## AWARNING

Please note that voltages up to 1099 VDC, depending on the supply voltage, may occur on the terminals.

## F Frame Requirements

The brake resistor(s) must be connected to the brake terminals in each inverter module.

### 4.1.9 Brake Resistor Temperature Switch

## Frame size D-E-F

Torque: $0.5-0.6 \mathrm{Nm}$ ( 5 in -lbs)
Screw size: M3

This input can be used to monitor the temperature of an externally connected brake resistor. If the input between 104 and 106 is established, the frequency converter will trip on warning / alarm 27, "Brake IGBT". If the connection is closed between 104 and 105, the frequency converter will trip on warning / alarm 27, "Brake IGBT".
A KLIXON switch must be installed that is 'normally closed'. If this function is not used, 106 and 104 must be short-circuited together.
Normally closed: 104-106 (factory installed jumper)
Normally open: 104-105

| Terminal No. | Function |
| :--- | :--- |
| $106,104,105$ | Brake resistor temperature switch. |

## ACAUTION

If the temperature of the brake resistor gets too high and the thermal switch drops out, the frequency converter will stop braking. The motor will start coasting.

### 4.1.10 Load Sharing

| Terminal No. | Function |
| :--- | :--- |
| 88,89 | Loadsharing |

The connection cable must be screened and the max. length from the frequency converter to the DC bar is limited to 25 metres (82 feet).
Load sharing enables linking of the DC intermediate circuits of several frequency converters.

## AWARNING

Please note that voltages up to 1099 VDC may occur on the terminals.
Load Sharing calls for extra equipment and safety considerations. For further information, see load sharing Instructions MI.50.NX.YY.

## AWARNING

Please note that mains disconnect may not isolate the frequency converter due to DC link connection

### 4.1.11 Shielding against Electrical Noise

Before mounting the mains power cable, mount the EMC metal cover to ensure best EMC performance.

NOTE: The EMC metal cover is only included in units with an RFI filter.

Illustration 4.15 Mounting of EMC shield.

### 4.1.12 Mains Connection

Mains must be connected to terminals 91,92 and 93 . Earth is connected to the terminal to the right of terminal 93.

| Terminal No. | Function |
| :--- | :--- |
| $91,92,93$ | Mains R/L1, S/L2, T/L3 |
| 94 | Earth |

## NOTE

Check the name plate to ensure that the mains voltage of the frequency converter matches the power supply of your plant.

Ensure that the power supply can supply the necessary current to the frequency converter.

If the unit is without built-in fuses, ensure that the appropriate fuses have the correct current rating.

### 4.1.13 External Fan Supply

## Frame size D-E-F

In case the frequency converter is supplied by DC or if the fan must run independently of the power supply, an external power supply can be applied. The connection is made on the power card.

| Terminal No. | Function |
| :--- | :--- |
| 100,101 | Auxiliary supply S, T |
| 102,103 | Internal supply S, T |

The connector located on the power card provides the connection of line voltage for the cooling fans. The fans are connected from factory to be supplied form a common AC line (jumpers between 100-102 and 101-103). If external supply is needed, the jumpers are removed and the supply is connected to terminals 100 and 101. A 5 Amp fuse should be used for protection. In UL applications this should be LittleFuse KLK-5 or equivalent.

### 4.1.14 Fuses

## Branch circuit protection:

In order to protect the installation against electrical and fire hazard, all branch circuits in an installation, switch gear, machines etc., must be short-circuited and over-current protected according to national/international regulations.

## Short-circuit protection:

The frequency converter must be protected against short-circuit to avoid electrical or fire hazard. Armstrong recommends using the fuses mentioned below to protect service personnel and equipment in case of an internal failure in the drive. The frequency converter provides full short-circuit protection in case of a short-circuit on the motor output.
Over-current protection
Provide overload protection to avoid fire hazard due to overheating of the cables in the installation. The frequency converter is equipped with an internal over-current protection that can be used for upstream overload protection (UL-applications excluded). See 4-18 Current Limit. Moreover, fuses or circuit breakers can be used to provide the over-current protection in the installation. Over-current protection must always be carried out according to national regulations.

## Non UL compliance

If UL/CUL is not to be complied with, we recommend using the following fuses, which will ensure compliance with EN50178:

| P110 - P250 | $380-480 \mathrm{~V}$ | type gG |
| :--- | :--- | :--- |
| P315 - P450 | $380-480 \mathrm{~V}$ | type gR |

## UL Compliance

## 380-480 V, frame sizes D, E and F

The fuses below are suitable for use on a circuit capable of delivering 100,000 Arms (symmetrical), 240 V , or 480 V , or 500 V , or 600 V depending on the drive voltage rating. With the proper fusing the drive Short Circuit Current Rating (SCCR) is 100,000 Arms.

| F4 | P1M0 380-480V | Merlin Gerin NRJF36250U31AABSCYP |

### 4.1.17 F Frame Mains Contactors

| Frame size | Power hp (kW) \& Voltage | Type |
| :---: | :---: | :---: |
| F3 | P671 (500)-P751 (560) $380-480 \mathrm{~V}$ \& P952(710)-P1206 (900) 525-690V | Eaton XTCE650N22A |
| F3 | P845(630)-P1277 (952) (710) 380-480V | Eaton XTCEC14P22B |
| F4 | P1073 (800)-P1M0 380-480V \& P1M0-P1M4 525-690V | Eaton XTCEC14P22B |

### 4.1.18 Motor Insulation

For motor cable lengths $\leq$ the maximum cable length listed in the General Specifications tables the following motor insulation ratings are recommended because the peak voltage can be up to twice the DC link voltage, 2.8 times the mains voltage, due to transmission line effects in the motor cable. If a motor has lower insulation rating it recommended to use a du/dt or sine wave filter.

| Nominal Mains Voltage | Motor Insulation |
| :--- | :--- |
| $U_{\mathrm{N}} \leq 420 \mathrm{~V}$ | Standard ULL $=1300 \mathrm{~V}$ |
| $420 \mathrm{~V}<\mathrm{U}_{\mathrm{N}} \leq 500 \mathrm{~V}$ | Reinforced $\mathrm{U}_{\mathrm{LL}}=1600 \mathrm{~V}$ |
| $500 \mathrm{~V}<\mathrm{U}_{\mathrm{N}} \leq 600 \mathrm{~V}$ | Reinforced $\mathrm{ULL}_{\mathrm{LL}}=1800 \mathrm{~V}$ |
| $600 \mathrm{~V}<\mathrm{U}_{\mathrm{N}} \leq 690 \mathrm{~V}$ | Reinforced $\mathrm{U}_{\mathrm{LL}}=2000 \mathrm{~V}$ |

### 4.1.19 Motor Bearing Currents

It is generally recommended that motors of a rating 110 kW or higher operating via Variable Frequency Drives should have NDE (Non-Drive End) insulated bearings installed to eliminate circulating bearing currents due to the physical size of the motor. To minimize DE (Drive End) bearing and shaft currents proper grounding of the drive, motor, driven machine, and motor to the driven machine is required. Although failure due to bearing currents is low and very dependent on many different items, for security of operation the following are mitigation strategies which can be implemented.

## Standard Mitigation Strategies:

1. Use an insulated bearing
2. Apply rigorous installation procedures

Ensure the motor and load motor are aligned

Strictly follow the EMC Installation guideline

Reinforce the PE so the high frequency impedance is lower in the PE than the input power leads

Provide a good high frequency connection between the motor and the frequency converter for instance by screened cable which has a $360^{\circ}$ connection in the motor and the frequency converter

Make sure that the impedance from frequency converter to building ground is lower that the grounding impedance of the machine. This can be difficult for pumps- Make a direct earth connection between the motor and load motor.
3. Apply conductive lubrication
4. Try to ensure the line voltage is balanced to ground. This can be difficult for IT, TT, TN-CS or Grounded leg systems
5. Use an insulated bearing as recommended by the motor manufacturer (note: Motors from reputable manufacturers will typically have these fitted as standard in motors of this size)

If found to be necessary and after consultation with Armstrong:
6. Lower the IGBT switching frequency
7. Modify the inverter waveform, $60^{\circ}$ AVM vs. SFAVM
8. Install a shaft grounding system or use an isolating coupling between motor and load
9. Use minimum speed settings if possible
10. Use a dU/dt or sinus filter

### 4.1.20 Control Cable Routing

Tie down all control wires to the designated control cable routing as shown in the picture. Remember to connect the shields in a proper way to ensure optimum electrical immunity.

## Fieldbus connection

Connections are made to the relevant options on the control card. For details see the relevant fieldbus instruction. The cable must be placed in the provided path inside the frequency converter and tied down together with other control wires (see pictures).

Control card wiring path for the D3. Control card wiring for the D1, D2, D4, Control card wiring path for the F1/F3. Control card wiring for the E1 and E2 use the same path. F2/F4 use the same path.

In the Chassis (IPOO) and NEMA 1 units it is also possible to connect the fieldbus from the top of the unit as shown in the following pictures. On the NEMA 1 unit a cover plate must be removed.
Kit number for fieldbus top connection: 176F1742

Illustration 4.16 Top connection for fieldbus.

Installation of 24 Volt external DC Supply
Torque: $0.5-0.6 \mathrm{Nm}$ (5 in-lbs)
Screw size: M3

| No. | Function |
| :--- | :--- |
| $35(-), 36(+)$ | 24 V external DC supply |

24 VDC external supply can be used as low-voltage supply to the control card and any option cards installed. This enables full operation of the LCP (including parameter setting) without connection to mains. Please note that a warning of low voltage will be given when 24 VDC has been connected; however, there will be no tripping.

## AWARNING

Use 24 VDC supply of type PELV to ensure correct galvanic isolation (type PELV) on the control terminals of the frequency converter.

### 4.1.21 Access to Control Terminals

All terminals to the control cables are located beneath the LCP. They are accessed by opening the door of the IP21/ 54 version or removing the covers of the IP00 version.

### 4.1.22 Electrical Installation, Control Terminals

## To connect the cable to the terminal:

1. Strip insulation by about $9-10 \mathrm{~mm}$
2. Insert a screwdriver ${ }^{1)}$ in the square hole.
3. Insert the cable in the adjacent circular hole.
4. Remove the screwdriver. The cable is now mounted in the terminal.

To remove the cable from the terminal:

1. Insert a screw driver ${ }^{1)}$ in the square hole.
2. Pull out the cable.
${ }^{1)}$ Max. $0.4 \times 2.5 \mathrm{~mm}$

### 4.2 Connection Examples

### 4.2.1 Start/Stop

Terminal $18=5-10$ Terminal 18 Digital Input [8] Start Terminal $27=5-12$ Terminal 27 Digital Input [0] No operation (Default coast inverse)

## Terminal 37 = Safe stop

### 4.2.2 Pulse Start/Stop

Terminal $18=5-10$ Terminal 18 Digital Input [9] Latched start Terminal 27=5-12 Terminal 27 Digital Input [6] Stop inverse

Terminal $37=$ Safe stop

### 4.2.3 Speed Up/Down

Terminals 29/32 = Speed up/down:
Terminal $18=5-10$ Terminal 18 Digital Input Start [9] (default)

Terminal $27=5-12$ Terminal 27 Digital Input Freeze reference [19]

Terminal $29=5-13$ Terminal 29 Digital Input Speed up [21]
Terminal $32=5-14$ Terminal 32 Digital Input Speed down [22]

NOTE: Terminal 29 only in FC x02 ( $\mathrm{x}=$ series type).

### 4.2.4 Potentiometer Reference

## Voltage reference via a potentiometer:

Reference Source 1 = [1] Analog input 53 (default)
Terminal 53, Low Voltage $=0$ Volt
Terminal 53, High Voltage $=10$ Volt
Terminal 53, Low Ref./Feedback $=0$ RPM
Terminal 53, High Ref./Feedback $=1500$ RPM
Switch S201 = OFF (U)

### 4.3 Electrical Installation - additional

### 4.3.1 Electrical Installation, Control Cables

Illustration 4.17 Diagram showing all electrical terminals without options.
Terminal 37 is the input to be used for Safe Stop. For instructions on Safe Stop installation please refer to the section Safe Stop Installation in the frequency converter Design Guide. See also sections Safe Stop and Safe Stop Installation.

Very long control cables and analogue signals may in rare cases and depending on installation result in $50 / 60 \mathrm{~Hz}$ earth loops due to noise from mains supply cables.

If this occurs, it may be necessary to break the screen or insert a 100 nF capacitor between screen and chassis.

The digital and analog inputs and outputs must be connected separately to the frequency converter common inputs (terminal $20,55,39$ ) to avoid earth currents from both groups to affect other groups. For example, switching on the digital input may disturb the analog input signal.

Input polarity of control terminals

NOTE
Control cables must be screened/armoured.

Connect the wires as described in the Operating Instruction for the frequency converter. Remember to connect the shields in a proper way to ensure optimum electrical immunity.

### 4.3.2 Switches S201, S202, and S801

Switches S201 (A53) and S202 (A54) are used to select a current ( $0-20 \mathrm{~mA}$ ) or a voltage ( -10 to 10 V ) configuration of the analog input terminals 53 and 54 respectively.

Switch S801 (BUS TER.) can be used to enable termination on the RS-485 port (terminals 68 and 69).

See drawing Diagram showing all electrical terminals in section Electrical Installation.

Default setting:
S201 (A53) = OFF (voltage input)
S202 (A54) = OFF (voltage input)
S801 (Bus termination) $=$ OFF

## NOTE

When changing the function of S201, S202 or S801 be careful not to use force for the switch over. It is recommended to remove the LCP fixture (cradle) when operating the switches.
The switches must not be operated with power on the frequency converter.

### 4.4 Final Set-up and Test

To test the set-up and ensure that the frequency converter is running, follow these steps.

Step 1. Locate the motor name plate

## NOTE

The motor is either star- $(Y)$ or delta- connected $(\Delta)$. This information is located on the motor name plate data.

Step 2. Enter the motor name plate data in this parameter list.
To access this list first press the [QUICK MENU] key then select "Q2 Quick Setup".

| 1. | $1-20$ Motor Power [kW] <br> $1-21$ Motor Power [HP] |
| :--- | :--- |
| 2. | $1-22$ Motor Voltage |
| 3. | $1-23$ Motor Frequency |
| 4. | $1-24$ Motor Current |
| 5. | $1-25$ Motor Nominal Speed |

## Step 3. Activate the Automatic Motor Adaptation (AMA)

Performing an AMA will ensure optimum performance. The AMA measures the values from the motor model equivalent diagram.

1. Connect terminal 37 to terminal 12 (if terminal 37 is available).
2. Connect terminal 27 to terminal 12 or set 5-12 Terminal 27 Digital Input to 'No function' (5-12 Terminal 27 Digital Input [0])
3. Activate the AMA 1-29 Automatic Motor Adaptation (AMA).
4. Choose between complete or reduced AMA. If a Sine-wave filter is mounted, run only the reduced AMA, or remove the Sine-wave filter during the AMA procedure.
5. Press the [OK] key. The display shows "Press [Hand on] to start".
6. Press the [Hand on] key. A progress bar indicates if the AMA is in progress.

## Stop the AMA during operation

1. Press the [OFF] key - the frequency converter enters into alarm mode and the display shows that the AMA was terminated by the user.

## Successful AMA

1. The display shows "Press [OK] to finish AMA".
2. Press the $[O K]$ key to exit the AMA state.

## Unsuccessful AMA

1. The frequency converter enters into alarm mode. A description of the alarm can be found in the Warnings and Alarms chapter.
2. "Report Value" in the [Alarm Log] shows the last measuring sequence carried out by the AMA, before the frequency converter entered alarm mode. This number along with the description of the alarm will assist you in troubleshooting. If you contact Armstrong for service, make sure to mention number and alarm description.

## NOTE

Unsuccessful AMA is often caused by incorrectly registered motor name plate data or a too big difference between the motor power size and the frequency converter power size.

Step 4. Set speed limit and ramp time

| 3-02 Minimum Reference |
| :--- |
| 3-03 Maximum Reference |

Table 4.17 Set up the desired limits for speed and ramp time.

| $4-11$ <br> $[\mathrm{~Hz}]$ |
| :--- |
| $4-13$ <br> $[\mathrm{~Hz}]$ |

[^4]
### 4.5 Additional Connections

### 4.5.1 Mechanical Brake Control

In hoisting/lowering applications, it is necessary to be able to control an electro-mechanical brake:

- Control the brake using any relay output or digital output (terminal 27 or 29).
- Keep the output closed (voltage-free) as long as the frequency converter is unable to 'support' the motor, for example due to the load being too heavy.
- Select Mechanical brake control [32] in par. 5-4* for applications with an electro-mechanical brake.
- The brake is released when the motor current exceeds the preset value in 2-20 Release Brake Current.
- The brake is engaged when the output frequency is less than the frequency set in 2-21 Activate Brake Speed [RPM]or 2-22 Activate Brake Speed [Hz], and only if the frequency converter carries out a stop command.

If the frequency converter is in alarm mode or in an over-voltage situation, the mechanical brake immediately cuts in.

### 4.5.2 Parallel Connection of Motors

The frequency converter can control several parallelconnected motors. The total current consumption of the motors must not exceed the rated output current $I_{M, N}$ for the frequency converter.

## NOTE

Installations with cables connected in a common joint as in the illustration below, is only recommended for short cable lengths.

## NOTE

When motors are connected in parallel, 1-29 Automatic Motor Adaptation (AMA) cannot be used.

## NOTE

The electronic thermal relay (ETR) of the frequency converter cannot be used as motor protection for the individual motor in systems with parallel-connected motors. Provide further motor protection by e.g. thermistors in each motor or individual thermal relays (circuit breakers are not suitable as protection).

Problems may arise at start and at low RPM values if motor sizes are widely different because small motors' relatively high ohmic resistance in the stator calls for a higher voltage at start and at low RPM values.

### 4.5.3 Motor Thermal Protection

The electronic thermal relay in the frequency converter has received UL-approval for single motor protection, when 1-90 Motor Thermal Protectionis set for ETR Trip and 1-24 Motor Current is set to the rated motor current (see motor name plate). For thermal motor protection it is also possible to use the MCB 112 PTC Thermistor Card option. This card provides ATEX certificate to protect motors in explosion hazardous areas, Zone $1 / 21$ and Zone $2 / 22$. Please refer to the Design Guide for further information.

## 5 How to Operate the Frequency Converter

### 5.1.1 Two Ways of Operating

## The frequency converter can be operated in two ways:

1. Graphical Local Control Panel (GLCP), see 5.1.2
2. RS-485 serial communication or USB, both for PC connection, see 5.1.4

If the frequency converter is fitted with fieldbus option, please refer to relevant documentation.

### 5.1.2 How to Operate Graphical LCP (GLCP)How to operate graphical LCP

The following instructions are valid for the GLCP (LCP 102).

The LCP is divided into four functional groups:

1. Graphical display with Status lines.
2. Menu keys and indicator lights (LED's) - selecting mode, changing parameters and switching between display functions.
3. Navigation keys and indicator lights (LEDs).
4. Operation keys and indicator lights (LEDs).

## Graphical display:

The LCD-display is back-lit with a total of 6 alpha-numeric lines. All data is displayed on the LCP which can show up to five operating variables while in [Status] mode.

## Display lines:

a. Status line: Status messages displaying icons and graphics.
b. Line 1-2: Operator data lines displaying data and variables defined or chosen by the user. By pressing the [Status] key, up to one extra line can be added.
c. Status line: Status messages displaying text.

The display is divided into 3 sections:

Top section (a) shows the status when in status mode or up to 2 variables when not in status mode and in the case of Alarm/ Warning.

The number of the Active Set-up (selected as the Active Set-up in 0-10 Active Set-up) is shown. When programming in another Set-up than the Active Set-up, the number of the Set-up being programmed appears to the right in brackets.

The Middle section (b) shows up to 5 variables with related unit, regardless of status. In case of alarm/warning, the warning is shown instead of the variables.

The Bottom section (c) always shows the state of the frequency converter in Status mode.

It is possible to toggle between three status read-out displays by pressing the [Status] key. Operating variables with different formatting are shown in each status screen - see below.

Several values or measurements can be linked to each of the displayed operating variables. The values / measurements to be displayed can be defined via 0-20 Display Line 1.1 Small, 0-21 Display Line 1.2 Small, 0-22 Display Line 1.3 Small, 0-23 Display Line 2 Large and 0-24 Display Line 3 Large, which can be accessed via [QUICK MENU], "Q3 Function Setups", "Q3-1 General Settings", "Q3-13 Display Settings".

Each value / measurement readout parameter selected in 0-20 Display Line 1.1 Small to 0-24 Display Line 3 Large has its own scale and number of digits after a possible decimal point. Larger numeric values are displayed with few digits after the decimal point.
Ex.: Current readout
5.25 A; 15.2 A 105 A.

## Status display I:

This read-out state is standard after start-up or initialization.
Use [INFO] to obtain information about the value/measurement linked to the displayed operating variables (1.1, 1.2, 1.3, 2, and 3).

See the operating variables shown in the display in this illustration. 1.1, 1.2 and 1.3 are shown in small size. 2 and 3 are shown in medium size.

## Status display II:

See the operating variables (1.1, 1.2, 1.3, and 2 ) shown in the display in this illustration.
In the example, Speed, Motor current, Motor power and Frequency are selected as variables in the first and second lines. 1.1, 1.2 and 1.3 are shown in small size. 2 is shown in large size.

Status display III:
This state displays the event and action of the Smart Logic Control. For further information, see section Smart Logic Control.

| Status | 0.86 A |
| :--- | ---: |
| 778 RPM | 4.0 kW |
|  |  |
| State: 0 off 0 (off) |  |
| Whe: - |  |
| Do: - |  |
| Auto Remote Running |  |

## Display Contrast Adjustment

Press [status] and [ $\mathbf{\Delta}$ ] for darker display
Press [status] and [ $\mathbf{v}$ ] for brighter display

Indicator lights (LEDs):

If certain threshold values are exceeded, the alarm and/or warning LED lights up. A status and alarm text appear on the control panel.
The On LED is activated when the frequency converter receives power from mains voltage, a DC bus terminal, or an external 24 V supply. At the same time, the back light is on.

- Green LED/On: Control section is working.
- Yellow LED/Warn.: Indicates a warning.
- Flashing Red LED/Alarm: Indicates an alarm.

## Keys

## Menu keys

The menu keys are divided into functions. The keys below the display and indicator lamps are used for parameter set-up, including choice of display indication during normal operation.

## [Status]

indicates the status of the frequency converter and/or the motor. 3 different readouts can be chosen by pressing the [Status] key:
5 line readouts, 4 line readouts or Smart Logic Control.
Use [Status] for selecting the mode of display or for changing back to Display mode from either the Quick Menu mode, the Main Menu mode or Alarm mode. Also use the [Status] key to toggle single or double read-out mode.

## [Quick Menu]

allows quick set-up of the frequency converter. The most common IVS 102 functions can be programmed here.

```
The [Quick Menu] consists of:
    - My Personal Menu
    - Quick Set-up
    - Function Set-up
    - Changes Made
    - Loggings
```

The Function set-up provides quick and easy access to all parameters required for the majority of IVS 102 applications including most VAV and CAV supply and return fans, cooling tower fans, Primary, Secondary and Condenser Water Pumps and other pump, fan and compressor applications. Amongst other features it also includes parameters for selecting which variables to display on the LCP, digital preset speeds, scaling of analog references, closed loop single zone and multi-zone applications and specific functions related to Fans, Pumps and Compressors.

The Quick Menu parameters can be accessed immediately unless a password has been created via 0-60 Main Menu Password, 0-61 Access to Main Menu w/o Password, 0-65 Personal Menu Password or 0-66 Access to Personal Menu w/o Password. It is possible to switch directly between Quick Menu mode and Main Menu mode.

## [Main Menu]

is used for programming all parameters.The Main Menu parameters can be accessed immediately unless a password has been created via 0-60 Main Menu Password, 0-61 Access to Main Menu w/o Password,0-65 Personal Menu Password or 0-66 Access to Personal Menu w/o Password. For the majority of IVS 102 applications it is not necessary to access the Main Menu parameters but instead the Quick Menu, Quick Set-up and Function Set-up provides the simplest and quickest access to the typical required parameters.
It is possible to switch directly between Main Menu mode and Quick Menu mode.
Parameter shortcut can be carried out by pressing down the [Main Menu] key for 3 seconds. The parameter shortcut allows direct access to any parameter.

## [Alarm Log]

displays an Alarm list of the five latest alarms (numbered A1-A5). To obtain additional details about an alarm, use the arrow keys to manoeuvre to the alarm number and press [OK]. Information is displayed about the condition of the frequency converter before it enters the alarm mode.

The Alarm log button on the LCP allows access to both Alarm log and Maintenance log.

## [Back]

reverts to the previous step or layer in the navigation structure.

## [Cancel]

last change or command will be cancelled as long as the display has not been changed.

## [Info]

displays information about a command, parameter, or function in any display window. [Info] provides detailed information when needed.
Exit Info mode by pressing either [Info], [Back], or [Cancel].

130BP052.10

## Navigation Keys

The four navigation arrows are used to navigate between the different choices available in [Quick Menu], [Main Menu] and [Alarm Log]. Use the keys to move the cursor.
[OK] is used for choosing a parameter marked by the cursor and for enabling the change of a parameter.

Operation Keys for local control are found at the bottom of the control panel.

## [Hand On]

enables control of the frequency converter via the GLCP. [Hand On] also starts the motor, and it is now possible to enter the motor speed data by means of the arrow keys. The key can be selected as Enable [1] or Disable [0] via 0-40 [Hand on] Key on LCP.
The following control signals will still be active when [Hand On] is activated:

- [Hand On] - [Off] - [Auto on]
- Reset
- Coasting stop inverse
- Reversing
- Set-up select Isb - Set-up select msb
- Stop command from serial communication
- Quick stop
- DC brake

## NOTE

External stop signals activated by means of control signals or a serial bus will override a "start" command via the LCP.

## [Off]

stops the connected motor. The key can be selected as Enable [1] or Disable [0] via 0-41 [Off] Key on LCP. If no external stop function is selected and the [Off] key is inactive the motor can only be stopped by disconnecting the mains supply.

## [Auto on]

enables the frequency converter to be controlled via the control terminals and/or serial communication. When a start signal is applied on the control terminals and/or the bus, the frequency converter will start. The key can be selected as Enable [1] or Disable [0] via 0-42 [Auto on] Key on LCP.

## NOTE

An active HAND-OFF-AUTO signal via the digital inputs has
higher priority than the control keys [Hand on] - [Auto on].

## [Reset]

is used for resetting the frequency converter after an alarm (trip). It can be selected as Enable [1] or Disable [0] via 0-43 [Reset] Key on LCP.

The parameter shortcut can be carried out by holding down the [Main Menu] key for 3 seconds. The parameter shortcut allows direct access to any parameter.

### 5.1.3 RS-485 Bus Connection

One or more frequency converters can be connected to a controller (or master) using the RS-485 standard interface. Terminal 68 is connected to the $P$ signal ( $T X+, R X+$ ), while terminal 69 is connected to the $N$ signal ( $T X-, R X-$ ).

If more than one frequency converter is connected to a master, use parallel connections.

Illustration 5.1 Connection example.

In order to avoid potential equalizing currents in the screen, earth the cable screen via terminal 61, which is connected to the frame via an RC-link.

## Bus termination

The RS-485 bus must be terminated by a resistor network at both ends. If the drive is the first or the last device in the RS-485 loop, set the switch S 801 on the control card for ON.
For more information, see the paragraph Switches S201, S202, and S801.

### 5.1.4 How to connect a PC to the frequency converter

To control or program the frequency converter from a PC, install the PC-based Configuration Tool MCT 10.
The PC is connected via a standard (host/device) USB cable, or via the RS-485 interface as shown in the IVS 102 Design Guide, chapter How to Install > Installation of misc. connections.

## NOTE

The USB connection is galvanically isolated from the supply voltage (PELV) and other high-voltage terminals. The USB connection is connected to protection earth on the frequency converter. Use only an isolated laptop as PC connection to the USB connector on the frequency converter.

Illustration 5.2 For control cable connections, see section on Control Terminals.

### 5.1.5 PC software tools

## PC-based Configuration Tool MCT 10

All Frequency converters are equipped with a serial communication port. Armstrong provides a PC tool for communication between PC and frequency converter, PC-based Configuration Tool MCT 10. Please check the section on Available Literature for detailed information on this tool.

## MCT 10 set-up software

MCT 10 has been designed as an easy to use interactive tool for setting parameters in our frequency converters. .
The MCT 10 set-up software will be useful for:

- Planning a communication network off-line. MCT 10 contains a complete frequency converter database
- Commissioning frequency converters on line
- Saving settings for all frequency converters
- Replacing a frequency converter in a network
- Simple and accurate documentation of frequency converter settings after commissioning.
- Expanding an existing network
- Future developed frequency converters will be supported

MCT 10 set-up software supports Profibus DP-V1 via a Master class 2 connection. It makes it possible to on line read/write parameters in a frequency converter via the Profibus network. This will eliminate the need for an extra communication network.

## Save frequency converter settings:

1. Connect a PC to the unit via USB com port. (NOTE: Use a PC, which is isolated from the mains, in conjunction with the USB port. Failure to do so may damage equipment.)
2. Open MCT 10 Set-up Software
3. Choose "Read from drive"
4. Choose "Save as"

All parameters are now stored in the PC.

## Load frequency converter settings:

1. Connect a PC to the frequency converter via USB com port
2. Open MCT 10 Set-up software
3. Choose "Open"- stored files will be shown
4. Open the appropriate file
5. Choose "Write to drive"

All parameter settings are now transferred to the frequency converter.

A separate manual for MCT 10 Set-up Software is available: MG.10.Rx.yy.

The MCT 10 Set-up software modules
The following modules are included in the software package:

| $\mathrm{m} \mid \mathrm{CT} \mathrm{T}$ | MCT Set-up 10 Software |
| :--- | :--- | :--- |
|  | Setting parameters |
|  | Copy to and from frequency converters |
|  | Documentation and print out of parameter settings incl. diagrams |
|  | Ext. user interface |
|  | Preventive Maintenance Schedule |
|  | Clock settings |
|  | Timed Action Programming |
|  | Smart Logic Controller Set-up |
|  |  |

## Ordering number:

Please order the CD containing MCT 10 Set-up Software using code number 130B1000.

### 5.1.6 Tips and Tricks

| $*$ | For the majority of HVAC applications the Quick Menu, Quick Set-up and Function Set-up provides the simplest and <br> quickest access to all the typical parameters required. |
| :--- | :--- |
| $*^{*}$ | Whenever possible, performing an AMA, will ensure best shaft performance |
| ${ }^{*}$ | Contrast of the display can be adjusted by pressing [Status] and [ $\mathbf{\Delta}$ ] for darker display or by pressing [Status] and [ $\mathbf{v}$ ] for <br> brighter dispaly |
| ${ }^{*}$ | Under [Quick Menu] and [Changes Made] all parameters that have been changed from factory settings are displayed |
| Press and hold [Main Menu] key for 3 seconds for access to any parameter $\quad$ For service purposes it is recommended to copy all parameters to the LCP, see 0-50 LCP Copy for further information |  |

Table 5.1 Tips and tricks

### 5.1.7 Quick Transfer of Parameter Settings when Using GLCP

Once the set-up of a frequency converter is complete, it is recommended to store (backup) the parameter settings in the GLCP or on a PC via MCT 10 Set-up Software Tool.

## AWARNING

Stop the motor before performing any of these operations.

## Data storage in LCP:

1. Go to 0-50 LCP Copy
2. Press the $[O K]$ key
3. Select "All to LCP"
4. Press the [OK] key

All parameter settings are now stored in the GLCP indicated by the progress bar. When $100 \%$ is reached, press [OK].

The GLCP can now be connected to another frequency converter and the parameter settings copied to this frequency converter.

## Data transfer from LCP to Frequency converter:

1. Go to 0-50 LCP Copy
2. Press the $[O K]$ key
3. Select "All from LCP"
4. Press the [OK] key

The parameter settings stored in the GLCP are now transferred to the frequency converter indicated by the progress bar. When $100 \%$ is reached, press [OK].

### 5.1.8 Initialisation to Default Settings

There are two ways to initialise the frequency converter to default: Recommended initialisation and manual initialisation. Please be aware that they have different impact according to the below description.

## Recommended initialisation (via 14-22 Operation Mode)

1. Select 14-22 Operation Mode
2. Press [OK]
3. Select "Initialisation" (for NLCP select " 2 ")
4. Press [OK]
5. Remove power to unit and wait for display to turn off.
6. Reconnect power and the frequency converter is reset. Note that first start-up takes a few more seconds
7. Press [Reset]

| 14-22 Operation Mode initialises all except: |
| :--- |
| 14-50 RFI Filter |
| 8-30 Protocol |
| 8-31 Address |
| 8-32 Baud Rate |
| 8-35 Minimum Response Delay |
| 8-36 Max Response Delay |
| 8-37 Maximum Inter-Char Delay |
| 15-00 Operating Hours to 15-05 Over Volt's |
| 15-20 Historic Log: Event to 15-22 Historic Log: Time |
| 15-30 Alarm Log: Error Code to 15-32 Alarm Log: Time |

## NOTE

Parameters selected in 0-25 My Personal Menu, will stay present, with default factory setting.

Manual initialisation

## NOTE

When carrying out manual initialisation, serial communication, RFI filter settings and fault log settings are reset. Removes parameters selected in 0-25 My Personal Menu.

1. Disconnect from mains and wait until the display turns off.

2a. Press [Status] - [Main Menu] - [OK] at the same time while power up for Graphical LCP (GLCP)
2b. Press [Menu] while power up for LCP 101, Numerical Display
3. Release the keys after 5 s
4. The frequency converter is now programmed according to default settings

```
This parameter initialises all except:
15-00 Operating Hours
15-03 Power Up's
15-04 Over Temp's
15-05 Over Volt's
```

## 6 How to Programme

### 6.1.1 Parameter Set-Up

| Group | Title | Function |
| :---: | :---: | :---: |
| 0- | Operation and Display | Parameters used to program the fundamental functions of the frequency converter and the LCP including: selection of language; selection of which variables are displayed at each position in the display (e.g. static duct pressure or condenser water return temperature can be displayed with the setpoint in small digits in the top row and feedback in large digits in the centre of the dispay); enabling/disabling of the LCP keys/buttons; passwords for the LCP; upload and download of commissioned parameters to/from the LCP and setting the built in clock. |
| 1 - | Load / Motor | Parameters used to configure the frequency converter for the specific application and motor including: open or closed loop operation; type of application such as compressor, fan or centrifual pump; motor nameplate data; auto-tuning of the drive to the motor for optimum performance; flying start (typically used for fan applications) and motor thermal protection. |
| 2- | Brakes | Parameters used to configure braking functions of the frequency converter which although not common in many HVAC applications, can be useful on special fan applications. Parameters including: DC braking; dymamic/resistor braking and over voltage control (which provides automatic adjustment of the deceleration rate (auto-ramping) to avoid tripping when decelerating large inertia fans) |
| 3- | Reference / Ramps | Parameters used to program the minimum and maximum reference limits of speed (RPM/Hz) in open loop or in actual units when operating in closed loop); digital/preset references; jog speed; definition of the source of each reference (e.g. which analog input the reference signal is connected to); ramp up and down times and digital potentiometer settings. |
| 4- | Limits / Warnings | Parameters used to program limits and warnings of operation including: allowable motor direction; minimum and maximum motor speeds (e.g. in pump applications it is typical to program a minimum speed to approx $30-40 \%$ to ensure pump seals are adequately lubricated at all times, avoid cavitation and ensure adequate head is produced at all times to create flow); torque and current limits to protect the pump, fan or compressor driven by the motor; warnings for low/high current, speed, reference, and feedback; missing motor phase protection; speed bypass frequencies including semi-automatic setup of these frequencies (e.g. to avoid resonance conditions on cooling tower and other fans). |
| 5- | Digital In / Out | Parameters used to program the functions of all digital inputs, digital outputs, relay outputs, pulse inputs and pulse outputs for terminals on the control card and all option cards. |
| 6- | Analog In / Out | Parameters used to program the functions associated with all analog inputs and analog outputs for the terminals on the control card and General Purpose I/O option (MCB101) (note: NOT Analog I/O option MCB109, see parameter group 26-00) including: analog input live zero timeout function (which for example can be used to command a cooling tower fan to operate at full speed if the condenser water return sensor fails); scaling of the analog input signals (for example to match the analog input to the mA and pressure range of a static duct pressure sensor); filter time constant to filter out electrical noise on the analog signal which can sometimes occur when long cables are installed; function and scaling of the analog outputs (for example to provide an analog output representing motor current or kW to an analog input of a DDC controller) and to configure the analog outputs to be controlled by the BMS via a high level interface (HLI) (e.g. to control a chilled water valve) including ability to define a default value of these outputs in the event of the HLI failing. |
| 8- | Communication and Options | Parameters used for configuring and monitoring functions associated with the serial communications / high level interface to the frequency converter |
| 9- | Profibus | Parameters only applicable when a Profibus option is installed. |
| 10- | CAN Fieldbus | Parameters only applicable when a DeviceNet option is installed. |
| 11- | LonWorks | Parameters only applicable when a Lonworks option is installed. |

Table 6.1 Parameter Groups

| Group | Title | Function |
| :---: | :---: | :---: |
| 13- | Smart Logic Controller | Parameters used to configure the built in Smart Logic Controller (SLC) which can be used for simple functions such as comparators (e.g. if running above xHz , activate output relay), timers (e.g. when a start signal is applied, first activate output relay to open supply air damper and wait $x$ seconds before ramping up) or a more complex sequence of user defined actions executed by the SLC when the associated user defined event is evaluated as TRUE by the SLC. (For example, initiate an economiser mode in a simple AHU cooling application control scheme where there is no BMS. For such an application the SLC can monitor the outside air relative humidity and if it is below a defined value, the supply air temperature setpoint could be automatically increased. With the frequency converter monitoring the outside air relative humidity and supply air temperature via it's analog inputs and controlling the chilled water valve via one of the extended PI(D) loops and an analog output, it would then modulate that valve to maintain a higher supply air temperature). The SLC can often replace the need for other external control equipment. |
| 14- | Special Functions | Parameters used to configure special functions of the frequency converter including: setting of the switching frequency to reduce audible noise from the motor (sometimes required for fan applications); kinetic back-up function (especially useful for critical applications in semi-conductor installations where performance under mains dip/mains loss is important); mains imbalance protection; automatic reset (to avoid the need for a manual reset of Alarms); energy optimisation parameters (which typically do not need changing but enable fine tuning of this automatic function (if necessary) ensuring the frequency converter and motor combination operate at their optimum efficiency at full and partial load conditions) and auto-derating functions (which enable the frequency converter to continue operation at reduced performance under extreme operating conditions ensuring maximum up time). |
| 15- | FC Information | Parameters providing operating data and other drive information including: operating and running hour counters; kWh counter; resetting of the running and kWh counters; alarm/fault log (where the past 10 alarms are logged along with any associated value and time) and drive and option card indentification parameters such as code number and software version. |
| 16- | Data Readouts | Read only parameters which display the status/value of many operating variables which can be displayed on the LCP or viewed in this parameter group. These parameters can be particularly useful during commissioning when interfacing with a BMS via a high level interface. |
| 18- | Info \& Readouts | Read only parameters which display the last 10 prevantative maintenance log items, actions and time and the value of analog inputs and outputs on the Analog I/O option card which can be particularly useful during commissioning when interfacing with a BMS via a high level interface. |
| 20- | FC Closed Loop | Parameters used to configure the closed loop $\mathrm{PI}(\mathrm{D})$ controller which controls the speed of the pump, fan or compressor in closed loop mode including: defining where each of the 3 possible feedback signals come from (e.g. which analog input or the BMS HLI); conversion factor for each of the feedback signals (e.g. where a pressure signal is used for indication of flow in an AHU or converting from pressure to temperature in a compressor application); engineering unit for the reference and feedback (e.g. Pa, $\mathrm{kPa}, \mathrm{m} \mathrm{Wg}$, in Wg , bar, $\mathrm{m} 3 / \mathrm{s}, \mathrm{m} 3 / \mathrm{h},{ }^{\circ} \mathrm{C},{ }^{\circ} \mathrm{F}$ etc); the function (e.g. sum, difference, average, minimum or maximum) used to calculate the resulting feedback for single zone applications or the control philosophy for multi-zone applications; programming of the setpoint(s) and manual or auto-tuning of the $\mathrm{PI}(\mathrm{D})$ loop. |
| 21- | Extended Closed Loop | Parameters used to configure the 3 extended closed loop $\mathrm{PI}(\mathrm{D})$ controllers which for example can be used to control external actuators (e.g. chilled water valve to maintain supply air temperature in a VAV system) including: engineering unit for the reference and feedback of each controller (e.g. ${ }^{\circ} \mathrm{C}$, ${ }^{\circ} \mathrm{F}$ etc); defining the range of the reference/setpoint for each controller; defining where each of the references/setpoints and feedback signals come from (e.g. which analog input or the BMS HLI); programming of the setpoint and manual or auto-tuning of the each of the $\operatorname{PI}(\mathrm{D})$ controllers. |
| 22- | Application Functions | Parameters used to monitor, protect and control pumps, fans and compressors including: no flow detection and protection of pumps (including auto-setup of this function); dry pump protection; end of curve detection and protection of pumps; sleep mode (especially useful for cooling tower and booster pump sets); broken belt detection (typically used for fan applications to detect no air flow instead of using a $\Delta \mathrm{p}$ switch installed across the fan); short cycle protection of compressors and pump flow compensation of setpoint (especially useful for secondary chilled water pump applications where the $\Delta p$ sensor has been installed close to the pump and not acoss the furthest most significant load(s) in the system; using this function can compensate for the sensor installation and help to realise the maximum energy savings). |

Parameter descriptions and selections are displayed on the graphic (GLCP) or numeric (NLCP) display. (See relevant section for details.) Access the parameters by pressing the [Quick Menu] or [Main Menu] button on the control panel. The Quick Menu is used primarily for commissioning the unit at start-up by providing the parameters necessary to start operation. The Main Menu provides access to all parameters for detailed application programming.

All digital input/output and analog input/output terminals are multifunctional. All terminals have factory default functions suitable for the majority of HVAC applications but if other special functions are required, they must be programmed as explained in parameter group 5 or 6 .

## Parameter Descriptions

### 6.1.2 Quick Menu mode

## Parameter data

The keypad provides access to all parameters listed under the Quick Menus. The numeric display (NLCP) only provides access to the Quick Setup parameters. To set parameters using the [Quick Menu] button - enter or change parameter data or settings in accordance with the following procedure:

1. Press Quick Menu button
2. Use the [ $\mathbf{\Delta}$ ] and [ $\mathbf{v}]$ buttons to find the parameter you want to change
3. Press [OK]
4. Use [ $\mathbf{4}$ ] and [ $\mathbf{V}$ ] buttons to select the correct parameter setting
5. Press [OK]
6. To move to a different digit within a parameter setting, use the [ $\varangle$ ] and [ $\downarrow$ ] buttons
7. Highlighted area indicates digit selected for change
8. Press [Cancel] button to disregard change, or press [OK] to accept change and enter the new setting

## Example of changing parameter data

Assume parameter 22-60 is set to [Off]. However, you want to monitor the fan-belt condition - non- broken or broken according to the following procedure:

1. Press Quick Menu key
2. Choose Function Setups with the [ $\mathbf{v}$ ] button
3. Press [OK]
4. Choose Application Settings with the [v] button
5. Press [OK]
6. Press [OK] again for Fan Functions
7. Choose Broken Belt Function by pressing [OK]
8. With [v] button, choose [2] Trip

The frequency converter will now trip if a broken fan-belt is detected.

## Select [My Personal Menu] to display personal parameters:

Select [My Personal Menu] to display only the parameters, which have been pre-selected and programmed as personal parameters. For example, an AHU or pump OEM may have pre-programmed personal parameters to be in My Personal Menu during factory commissioning to make on-site commissioning/fine tuning simpler. These parameters are selected in 0-25 My Personal Menu. Up to 20 different parameters can be programmed in this menu.

## Select [Changes Made] to get information about:

- The last 10 changes. Use the up/down navigation keys to scroll between the last 10 changed parameters.
- The changes made since default setting.

## Select [Loggings]:

to get information about the display line read-outs. The information is shown as graphs.
Only display parameters selected in 0-20 Display Line 1.1 Small and $0-24$ Display Line 3 Large can be viewed. It is possible to store up to 120 samples in the memory for later reference.

## Efficient Parameter Set-up for IVS 102 Applications:

The parameters can easily be set up for the vast majority of the IVS 102 applications only by using the [Quick Setup] option. After pressing [Quick Menu], the different choices in the Quick Menu are listed. See also illustration 6.1 below and tables Q3-1 to Q3-4 in the followingFunction Setups section.

## Example of using the Quick Setup option:

Assume you want to set the Ramp Down Time to 100 seconds!

1. Select [Quick Setup]. The first 0-01 Language in Quick Setup appears
2. Press [ $\mathbf{v}$ ] repeatedly until $3-42$ Ramp 1 Ramp Down Time appears with the default setting of 20 seconds
3. Press $[\mathrm{OK}]$
4. Use the [4] button to highlight the 3rd digit before the comma
5. Change ' 0 ' to ' 1 ' by using the [ $\mathbf{\Delta}]$ button
6. Use the [ $\bullet$ ] button to highlight the digit ' 2 '
7. Change ' 2 ' to ' 0 ' with the $[\mathbf{v}]$ button
8. Press [OK]

The new ramp-down time is now set to 100 seconds.
It is recommended to do the set-up in the order listed.

## NOTE

A complete description of the function is found in the parameter sections of this manual.

Illustration 6.1 Quick Menu view.

The Quick Setup menu gives access to the 18 most important setup parameters of the frequency converter. After programming the frequency converter will, in most cases, be ready for operation. The 18 Quick Setup parameters are shown in the table below. A complete description of the function is given in the parameter description sections of this manual.

| Parameter | [Units] |
| :---: | :---: |
| 0-01 Language |  |
| 1-20 Motor Power [kW] | [kW] |
| 1-21 Motor Power [HP] | [HP] |
| 1-22 Motor Voltage* | [V] |
| 1-23 Motor Frequency | [Hz] |
| 1-24 Motor Current | [A] |
| 1-25 Motor Nominal Speed | [RPM] |
| 1-28 Motor Rotation Check | [Hz] |
| 3-41 Ramp 1 Ramp Up Time | [s] |
| 3-42 Ramp 1 Ramp Down Time | [s] |
| 4-11 Motor Speed Low Limit [RPM] | [RPM] |
| 4-12 Motor Speed Low Limit [Hz]* | [ Hz ] |
| 4-13 Motor Speed High Limit [RPM] | [RPM] |
| 4-14 Motor Speed High Limit [Hz]* | [ Hz ] |
| 3-19 Jog Speed [RPM] | [RPM] |
| 3-11 Jog Speed [Hz]* | [Hz] |
| 5-12 Terminal 27 Digital Input |  |
| 5-40 Function Relay** |  |

Table 6.2 Quick Setup parameters
*The display showing depends on choices made in 0-02 Motor Speed Unit and 0-03 Regional Settings. The default settings of $0-02$ Motor Speed Unit and 0-03 Regional Settings depend on which region of the world the frequency converter is supplied to but can be re-programmed as required.
** 5-40 Function Relay, is an array, where one may choose between Relay1 [0] or Relay2 [1]. Standard setting is Relay1 [0] with the default choice Alarm [9].
See the parameter description in the section Commonly Used Parameters.

For a detailed information about settings and programming, please see the IVS 102 Programming Guide, MG.12.FX.YY
$\mathrm{x}=\mathrm{version}$ number
$y=$ language

## NOTE

If [No Operation] is selected in 5-12 Terminal 27 Digital Input, no connection to +24 V on terminal 27 is necessary to enable start.
If [Coast Inverse] (factory default value) is selected in 5-12 Terminal 27 Digital Input, a connection to +24 V is necessary to enable start.

| 0-01 Language |  | Function: |
| :--- | :--- | :--- |
| Option: |  |  |
| Defines the language to be used in the |  |  |
| display. The frequency converter can be |  |  |
| delivered with 4 different language |  |  |
| packages. English and German are |  |  |
| included in all packages. English cannot |  |  |
| be erased or manipulated. |  |  |

| Range: |  | Function: |
| :---: | :---: | :---: |
| Size related* | $\begin{aligned} & {\left[\begin{array}{l} {[0.09-} \\ 3000.00 \\ \mathrm{~kW}] \end{array}\right.} \end{aligned}$ | Enter the nominal motor power in kW according to the motor nameplate data. The default value corresponds to the nominal rated output of the unit. <br> This parameter cannot be adjusted while the motor is running. Depending on the choices made in 0-03 Regional Settings, either 1-20 Motor Power [kW] or 1-21 Motor Power [HP] is made invisible. |

| 1-21 Motor Power [HP] |  |
| :--- | :---: | :--- |
| Range: | Function: |
| Size <br> related* <br> $3000.09-$ <br> $\mathrm{hp}]$ | Enter the nominal motor power in HP <br> according to the motor nameplate data. <br> The default value corresponds to the <br> nominal rated output of the unit. <br> This parameter cannot be adjusted while <br> the motor is running. <br> Depending on the choices made in <br> O-03 Regional Settings, either 1-20 Motor <br> Power [kW] or 1-21 Motor Power [HP] is <br> made invisible. |

| Range: | Function: |  |
| Size <br> related* | $[20-$ <br> $1000 \mathrm{~Hz}]$ | Select the motor frequency value from the <br> motor nameplate data.For 87 Hz operation <br> with 230/400 V motors, set the nameplate <br> data for $230 \mathrm{~V} / 50 \mathrm{~Hz}$ Adapt 4-13 Motor <br> Speed High Limit $[R P M]$ and 3-03 Maximum <br> Reference to the 87 Hz application. |

## NOTE

This parameter cannot be adjusted while the motor is running.

| 1-24 Motor Current |  |  |
| :--- | :--- | :--- |
| Range: | Function: |  |
| Size related* | $0.10-$ <br> $10000.00 \mathrm{~A}]$ | Enter the nominal motor current <br> value from the motor nameplate <br> data. This data is used for <br> calculating motor torque, motor <br> thermal protection etc. |

## NOTE

This parameter cannot be adjusted while the motor is running.

| 1-25 Motor Nominal Speed |  |  |
| :--- | :--- | :--- |
| Range: | Function: |  |
| Size related* | $[100-60000$ <br> RPM] | Enter the nominal motor speed <br> value from the motor nameplate <br> data. This data is used for <br> calculating automatic motor <br> compensations. |

## NOTE

This parameter cannot be adjusted while the motor is running.

| 1-28 |  | Motor Rotation Check |
| :--- | :--- | :--- |
| Option: |  | Function: |
|  |  | Following installation and connection of the motor, <br> this function allows the correct motor rotation <br> direction to be verified. Enabling this function <br> overrides any bus commands or digital inputs, <br> except External Interlock and Safe Stop (if included). |
| [0] * | Off | Motor Rotation Check is not active. |
| [1] | Enabled | Motor Rotation Check is enabled. Once enabled, <br> Display shows: <br> "Note! Motor may run in wrong direction". |

Pressing [OK], [Back] or [Cancel] will dismiss the message and display a new message: "Press [Hand on] to start the motor. Press [Cancel] to abort". Pressing [Hand on] starts the motor at 5 Hz in forward direction and the display shows: "Motor is running. Check if motor rotation direction is correct. Press [Off] to stop the motor". Pressing [Off] stops the motor and resets 1-28 Motor Rotation Check. If motor rotation direction is incorrect, two motor phase cables should be interchanged. IMPORTANT:

## AWARNING

Mains power must be removed before disconnecting motor phase cables.

| Range: |  | Function: |
| :---: | :---: | :---: |
| Size related* | $\begin{array}{\|l} \hline[1.00- \\ 3600.00 \\ \text { s] } \end{array}$ | Enter the ramp-up time, i.e. the acceleration time from 0 RPM to 1-25 Motor Nominal Speed. Choose a ramp-up time such that the output current does not exceed the current limit in 4-18 Current Limit during ramping. See ramp-down time in 3-42 Ramp 1 Ramp Down Time. $\text { par. } 3-41=\frac{\text { tacc } \times \text { nnorm }[\text { par. } 1-25]}{\operatorname{ref}[\mathrm{rpm}]}[\mathrm{s}]$ |

| 3-42 Ramp 1 Ramp Down Time |  |  |
| :---: | :---: | :---: |
| Range: |  | Function: |
| Size related* | $\begin{aligned} & {[1.00-} \\ & 3600.00 \\ & \text { s] } \end{aligned}$ | Enter the ramp-down time, i.e. the deceleration time from 1-25 Motor Nominal Speed to 0 RPM. Choose a ramp-down time such that no overvoltage arises in the inverter due to regenerative operation of the motor, and such that the generated current does not exceed the current limit set in 4-18 Current Limit. See ramp-up time in 3-41 Ramp 1 Ramp Up Time. $\text { par. } 3-42=\frac{\text { tdec } \times \text { nnorm }[\text { par. } 1-25]}{\operatorname{ref}[\mathrm{rpm}]}[s]$ |

| 4-14 Motor Speed High Limit [Hz] |  |
| :--- | :---: | :--- |
| Range: | Function: |

## NOTE

Max. output frequency cannot exceed $10 \%$ of the inverter switching frequency (14-01 Switching Frequency).

| 4-12 Motor Speed Low Limit [Hz] |  |  |
| :--- | :--- | :--- |
| Range: | Function: |  |
| Size related* | $[0-$ par. <br> $4-14 \mathrm{~Hz}]$ | Enter the minimum limit for motor <br> speed. The Motor Speed Low Limit can <br> be set to correspond to the minimum <br> output frequency of the motor shaft. <br> The Speed Low Limit must not exceed <br> the setting in 4-14 Motor Speed High <br> Limit [Hz]. |

## 4-13 Motor Speed High Limit [RPM]

| Range: |  | Function: |
| :---: | :---: | :---: |
| Size related* | $\begin{aligned} & \hline \text { [par. 4-11 } \\ & -60000 . \\ & \text { RPM] } \end{aligned}$ | Enter the maximum limit for motor speed. The Motor Speed High Limit can be set to correspond to the manufacturer's maximum rated motor. The Motor Speed High Limit must exceed the setting in 4-11 Motor Speed Low Limit [RPM]. Only 4-11 Motor Speed Low Limit [RPM] or 4-12 Motor Speed Low Limit [Hz] will be displayed depending on other parameters in the Main Menu and depending on default settings dependant on global location. |

## NOTE

Max. output frequency cannot exceed $10 \%$ of the inverter switching frequency (14-01 Switching Frequency).

## NOTE

Any changes in 4-13 Motor Speed High Limit [RPM] will reset the value in 4-53 Warning Speed High to the same value as set in 4-13 Motor Speed High Limit [RPM].

| 4-11 Motor Speed Low Limit [RPM] |  |  |
| :--- | :--- | :--- |
| Range: | Function: |  |
| Size <br> related* | $[0-$ par. <br> $4-13$ RPM] $]$ | Enter the minimum limit for motor <br> speed. The Motor Speed Low Limit can <br> be set to correspond to the <br> manufacturer's recommended <br> minimum motor speed. The Motor <br> Speed Low Limit must not exceed the <br> setting in 4-13 Motor Speed High Limit <br> [RPM]. |

| 3-11 Jog Speed [Hz] |  |  |
| :--- | :--- | :--- |
| Range: |  | Function: |
| Size related* | $[0.0-$ par. <br> $4-14 \mathrm{~Hz}]$ | The jog speed is a fixed output speed <br> at which the frequency converter is <br> running when the jog function is <br> activated. <br> See also 3-80 Jog Ramp Time. |

## 6．1．3 Function Set－ups

The Function set－up provides quick and easy access to all parameters required for the majority of IVS 102 applications including most VAV and CAV supply and return fans，cooling tower fans，Primary，Secondary and Condenser Water Pumps and other pump，fan and compressor applications．

## How to access Function set－up－example

| Status |  | 1 （1） |
| :---: | :---: | :---: |

|  | 1-73 Flying Start |  |

See also for a detailed description of the Function Setups parameter groups.

| 1-00 Configuration Mode |  |  |
| :--- | :--- | :--- |
| Option: | Function: |  |
| Open | Lootor speed is determined by applying a speed <br> reference or by setting desired speed when in <br> Hand Mode. <br> Open Loop is also used if the frequency converter <br> is part of a closed loop control system based on <br> an external PID controller providing a speed <br> reference signal as output. |  |
| [3] | Closed <br> Loop | Motor Speed will be determined by a reference <br> from the built-in PID controller varying the motor <br> speed as part of a closed loop control process (e.g. <br> constant pressure or flow). The PID controller <br> must be configured in par. 20-** or via the <br> Function Setups accessed by pressing the [Quick <br> Menus] button. |

## NOTE

This parameter cannot be changed when motor is running.

## NOTE

When set for Closed Loop, the commands Reversing and Start Reversing will not reverse the direction of the motor.

## 1-03 Torque Characteristics

## Option:

## Function:

| [0] | Compressor <br> torque | Compressor [0]: For speed control of screw and <br> scroll compressors. Provides a voltage which is <br> optimized for a constant torque load charac- <br> teristic of the motor in the entire range down <br> to 10 Hz. |
| :--- | :--- | :--- |
| [1] | Variable <br> torque | Variable Torque [1]: For speed control of <br> centrifugal pumps and fans. Also to be used <br> when controlling more than one motor from <br> the same frequency converter (e.g. multiple <br> condenser fans or cooling tower fans). Provides <br> a voltage which is optimized for a squared <br> torque load characteristic of the motor. |
| [2] | Auto Energy <br> Optim. CT | Auto Energy Optimization Compressor [2]: For <br> optimum energy efficient speed control of <br> screw and scroll compressors. Provides a <br> voltage which is optimized for a constant <br> torque load characteristic of the motor in the <br> entire range down to 15Hz but in addition the <br> AEO feature will adapt the voltage exactly to <br> the current load situation, thereby reducing <br> energy consumption and audible noise from <br> the motor. To obtain optimal performance, the |

| 1-03 Torque Characteristics |  |  |
| :---: | :---: | :---: |
| Option: |  | Function: |
|  |  | motor power factor cos phi must be set correctly. This value is set in 14-43 Motor Cosphi. The parameter has a default value which is automatically adjusted when the motor data is programmed. These settings will typically ensure optimum motor voltage but if the motor power factor cos phi requires tuning an AMA function can be carried out using 1-29 Automatic Motor Adaptation (AMA). It is very rarely necessary to adjust the motor power factor parameter manually. |
| [3] | Auto Energy Optim. VT | Auto Energy Optimization VT [3]: For optimum energy efficient speed control of centrifugal pumps and fans. Provides a voltage which is optimized for a squared torque load characteristic of the motor but in addition the AEO feature will adapt the voltage exactly to the current load situation, thereby reducing energy consumption and audible noise from the motor. To obtain optimal performance, the motor power factor cos phi must be set correctly. This value is set in 14-43 Motor Cosphi. The parameter has a default value and is automatically adjusted when the motor data is programmed. These settings will typically ensure optimum motor voltage but if the motor power factor cos phi requires tuning, an AMA function can be carried out using 1-29 Automatic Motor Adaptation (AMA). It is very rarely necessary to adjust the motor power factor parameter manually. |

| 1-29 Automatic Motor Adaptation (AMA) |  |  |
| :---: | :---: | :---: |
| Option: |  | Function: |
|  |  | The AMA function optimizes dynamic motor performance by automatically optimizing the advanced motor parameters 1-30 Stator Resistance (Rs) to 1-35 Main Reactance (Xh)) while the motor is stationary. |
| [0] * | Off | No function |
| [1] | Enable complete AMA | performs AMA of the stator resistance Rs, the rotor resistance $R_{r}$, the stator leakage reactance $X_{1}$, the rotor leakage reactance $X_{2}$ and the main reactance $X_{h}$. |
| [2] | Enable reduced AMA | Performs a reduced AMA of the stator resistance $R_{s}$ in the system only. Select this option if an LC filter is used between the frequency converter and the motor. |

Activate the AMA function by pressing [Hand on] after selecting [1] or [2]. See also the item Automatic Motor Adaptation in the Design Guide. After a normal sequence, the
display will read: "Press [OK] to finish AMA". After pressing the [OK] key the frequency converter is ready for operation.

## NOTE:

- For the best adaptation of the frequency converter, run AMA on a cold motor
- AMA cannot be performed while the motor is running

## NOTE

It is important to set motor par. 1-2* Motor Data correctly, since these form part of the AMA algorithm. An AMA must be performed to achieve optimum dynamic motor performance. It may take up to 10 min ., depending on motor power rating.

## NOTE

Avoid generating external torque during AMA.

## NOTE

If one of the settings in par. 1-2* Motor Data is changed, 1-30 Stator Resistance (Rs) to 1-39 Motor Poles, the advanced motor parameters, will return to default setting.
This parameter cannot be adjusted while the motor is running.

## NOTE

Full AMA should be run without filter only while reduced AMA should be run with filter.

See section: Application Examples > Automatic Motor Adaptation in the Design Guide.

| $1-71$ |  | Start Delay |
| :---: | :--- | :--- |
| Range: |  | Function: |
| $0.0 \mathrm{~s}^{*}$ | $[0.0-120.0 \mathrm{~s}]$ | The function selected in $1-80$ Function at <br> Stop is active in the delay period. <br> Enter the time delay required before <br> commencing acceleration. |

| 1-73 Flying Start |  |  |
| :--- | :--- | :--- |
| Option: |  | Function: |
|  | This function makes it possible to catch a motor <br> which is spinning freely due to a mains drop-out. <br> When 1-73 Flying Start is enabled, 1-71 Start Delay <br> has no function. <br> Search direction for flying start is linked to the <br> setting in 4-10 Motor Speed Direction. <br> Clockwise [0]: Flying start search in clockwise <br> direction. If not successful, a DC brake is carried <br> out. <br> Both Directions [2]: The flying start will first make a <br> search in the direction determined by the last |  |

## 1-73 Flying Start

\left.| Option: |  | Function: |
| :--- | :--- | :--- |
| reference (direction). If not finding the speed it will |  |  |
| make a search in the other direction. If not |  |  |
| successful, a DC brake will be activated in the time |  |  |
| set in 2-02 DC Braking Time. Start will then take |  |  |
| place from 0 Hz. |  |  |$\right]$

## 1-80 Function at Stop

| Option: |  | Function: |
| :--- | :--- | :--- |
|  |  | Select the frequency converter function <br> after a stop command or after the speed <br> is ramped down to the settings in <br> $1-81$ Min Speed for Function at Stop [RPM]. |
| $[0]$ * | Coast | Leaves motor in free mode. |
| $[1]$ | DC Hold/Motor <br> Preheat | Energizes motor with a DC holding <br> current (see 2-00 DC Hold/Preheat Current). |
| $[2]$ | Motor check, <br> warning |  |
| $[6]$ | Motor check, <br> alarm |  |

| 1-90 Motor Thermal Protection |  |  |
| :---: | :---: | :---: |
| Option: |  | Function: |
|  |  | The frequency converter determines the motor temperature for motor protection in two different ways: <br> - Via a thermistor sensor connected to one of the analog or digital inputs (1-93 Thermistor Source). <br> - Via calculation (ETR = Electronic Thermal Relay) of the thermal load, based on the actual load and time. The calculated thermal load is compared with the rated motor current $\mathrm{I}_{\mathrm{M}, \mathrm{N}}$ and the rated motor frequency $f_{M, N}$. The calculations estimate the need for a lower load at lower speed due to less cooling from the fan incorporated in the motor. |
| [0] | No protection | If the motor is continuously overloaded and no warning or trip of frequency converter is wanted. |
| [1] | Thermistor warning | Activates a warning when the connected thermistor in the motor reacts in the event of motor over-temperature. |
| [2] | Thermistor trip | Stops (trips) the frequency converter when the connected thermistor in the motor |

| 1-90 Motor Thermal Protection |  |  |
| :--- | :--- | :--- |
| Option: |  |  |
|  |  | Function: <br> reacts in the event of motor over- <br> temperature. |
| $[3]$ | ETR warning 1 |  |
| $[4] *$ | ETR trip 1 |  |
| $[5]$ | ETR warning 2 |  |
| $[6]$ | ETR trip 2 |  |
| $[7]$ | ETR warning 3 |  |
| $[8]$ | ETR trip 3 |  |
| $[9]$ | ETR warning 4 |  |
| $[10]$ | ETR trip 4 |  |

ETR (Electronic Thermal Relay) functions $1-4$ will calculate the load when set-up where they were selected is active. For example ETR-3 starts calculating when set-up 3 is selected. For the North American market: The ETR functions provide class 20 motor overload protection in accordance with NEC.

## NOTE

Armstrong recommends using 24 VDC as thermistor supply voltage.

| 1-93 Thermistor Source |  |  |
| :--- | :--- | :--- |
| Option: |  | Sunction: <br> (PTC sensor) should be connected. An <br> analog input option [1] or [2] cannot be <br> selected if the analog input is already in <br> use as a reference source (selected in <br> 3-15 Reference 1 Source, 3-16 Reference 2 <br> Source or 3-17 Reference 3 Source). <br> When using MCB112, choice [0] None must <br> always be selected. |
| $[0]$ * | None |  |
| $[1]$ | Analog input 53 |  |
| $[2]$ | Analog input 54 |  |
| $[3]$ | Digital input 18 |  |

## 1-93 Thermistor Source

| Option: |  | Function: |
| :--- | :--- | :--- |
| [4] | Digital input 19 |  |
| [5] | Digital input 32 |  |
| [6] | Digital input 33 |  |

## NOTE

This parameter cannot be adjusted while the motor is running.

## NOTE

Digital input should be set to [0] PNP - Active at 24 V in par. 5-00.

| Range: |  | Function: |
| :---: | :---: | :---: |
| 50 \%* |  | Enter a value for holding current as a percentage of the rated motor current $\mathrm{I}_{\mathrm{M}, \mathrm{N}}$ set in 1-24 Motor Current. 100\% DC holding current corresponds to $I_{M, N}$. <br> This parameter holds the motor (holding torque) or pre-heats the motor. <br> This parameter is active if [1] DC hold/Preheat is selected in 1-80 Function at Stop. |

## NOTE

The maximum value depends on the rated motor current. Avoid $100 \%$ current for too long. It may damage the motor.

## 2-10 Brake Function

| Option: |  | Function: |  |
| :--- | :--- | :--- | :---: |
| [0] * | Off | No brake resistor installed. |  |
| [1] | Resistor <br> brake | Brake resistor incorporated in the system, for <br> dissipation of surplus brake energy as heat. <br> Connecting a brake resistor allows a higher DC <br> link voltage during braking (generating <br> operation). The Resistor brake function is only <br> active in frequency converters with an integral <br> dynamic brake. |  |
| [2] | AC brake | AC Brake will only work in Compressor Torque <br> mode in 1-03 Torque Characteristics. |  |
| 2-17 Over-voltage Control |  |  |  |
| Option: | Function: |  |  |
|  | Over-voltage control (OVC) reduces the risk of the <br> frequency converter tripping due to an over <br> voltage on the DC link caused by generative power <br> from the load. |  |  |
| [0] | Disabled | No OVC required. |  |
| [2] * | Enabled | Activates OVC. |  |

## NOTE

The ramp time is automatically adjusted to avoid tripping of the frequency converter.

| 3-02 Minimum Reference |  |  |
| :---: | :---: | :---: |
| Range: |  | Function: |
| Size related* | [-999999.999 - par. <br> 3-03 Reference- <br> FeedbackUnit] | Enter the Minimum Reference. The Minimum Reference is the lowest value obtainable by summing all references. The Minimum Reference value and unit matches the configuration choice made in 1-00 Configuration Mode and 20-12 Reference/ Feedback Unit, respectively. <br> NOTE <br> This parameter is used in open loop only. |

## 3-03 Maximum Reference

| Range: |  | Function: |
| :--- | :--- | :--- |
| $\begin{array}{l}\text { Size } \\ \text { related* }\end{array}$ | $\begin{array}{l}\text { [par. 3-02-} \\ 999999.999 \\ \text { ReferenceFeed- } \\ \text { backUnit] }\end{array}$ | $\begin{array}{l}\text { Enter the maximum acceptable } \\ \text { value for the remote reference. } \\ \text { The Maximum Reference value } \\ \text { and unit matches the configu- } \\ \text { ration choice made in } \\ \text { 1-00 Configuration Mode and } \\ \text { 20-12 Reference/Feedback Unit, } \\ \text { respectively. } \\ \text { NOTE }\end{array}$ |
| If operating with 1-00 Configu- |  |  |
| ration Mode set for Closed |  |  |

## 3-10 Preset Reference

Array [8]

| Rang |  | Function: |
| :---: | :---: | :---: |
| $\begin{aligned} & 0.00 \\ & \%^{*} \end{aligned}$ | $\begin{gathered} \hline[-100.00- \\ 100.00 \%] \end{gathered}$ | Enter up to eight different preset references <br> (0-7) in this parameter, using array programming. The preset reference is stated as a percentage of the value Ref MAX (3-03 Maximum Reference, for closed loop see 20-14 Maximum Reference/Feedb.). When using preset references, select Preset ref. bit 0 / 1 / 2 [16], [17] or [18] for the corresponding digital inputs in parameter group 5-1* Digital Inputs. |

## 3-15 Reference 1 Source

Option:

## Function:

|  |  | Select the reference input to be used <br> for the first reference signal. <br> 3-15 Reference 1 Source, 3-16 Reference <br> 2 Source and 3-17 Reference 3 Source <br> define up to three different reference <br> signals. The sum of these reference <br> signals defines the actual reference. <br> This parameter cannot be adjusted <br> while the motor is running. |
| :--- | :--- | :--- |
| $[0]$ | No function |  |
| $[1] *$ | Analog input 53 |  |
| $[2]$ | Analog input 54 |  |
| $[7]$ | Pulse input 29 |  |
| $[8]$ | Pulse input 33 |  |
| $[20]$ | Digital pot.meter |  |
| $[21]$ | Analog input X30/11 |  |
| $[22]$ | Analog input X30/12 |  |
| $[23]$ | Analog Input X42/1 |  |
| $[24]$ | Analog Input X42/3 |  |
| $[25]$ | Analog Input X42/5 |  |
| $[29]$ | Analog Input X48/2 |  |
| $[30]$ | Ext. Closed Loop 1 |  |

## 3-15 Reference 1 Source

Option:
Function:

| [31] | Ext. Closed Loop 2 |  |
| :--- | :--- | :--- |
| [32] | Ext. Closed Loop 3 |  |

3-16 Reference 2 Source
Option: Function:

|  |  | Select the reference input to be used <br> for the second reference signal. <br> 3-15 Reference 1 Source, 3-16 Reference <br> 2 Source and 3-17 Reference 3 Source <br> define up to three different reference <br> signals. The sum of these reference <br> signals defines the actual reference. <br> This parameter cannot be adjusted <br> while the motor is running. |
| :--- | :--- | :--- |
| $[0]$ | No function |  |
| $[1]$ | Analog input 53 |  |
| $[2]$ | Analog input 54 |  |

| 4-10 Motor Speed Direction |  |  |
| :--- | :--- | :--- |
| Option: |  |  |
| Function: |  |  |
| $[0]$ | Selects the motor speed direction required. <br> Use this parameter to prevent unwanted <br> reversing. |  |
| $[2]$ * | Both directions | Only operation in clockwise direction will be <br> allowed. |
|  |  |  |
| Operation in both clockwise and anti- |  |  |
| clockwise direction will be allowed. |  |  |

## NOTE

The setting in 4-10 Motor Speed Direction has impact on the Flying Start in 1-73 Flying Start.

| 4-53 Warning Speed High |  |  |
| :--- | :--- | :--- |
| Range: | Function: |  |
| Size <br> related* | [par. <br> $4-52-$ <br> par. 4-13 <br> RPM] | Enter the nHIGH value. When the motor <br> speed exceeds this limit (nHIGH), the display <br> reads SPEED HIGH. The signal outputs can <br> be programmed to produce a status signal <br> on terminal 27 or 29 and on relay output 01 <br> or 02. Programme the upper signal limit of <br> the motor speed, nHIGH, within the normal <br> working range of the frequency converter. <br> Refer to the drawing in this section. |

## NOTE

Any changes in 4-13 Motor Speed High Limit [RPM] will reset the value in 4-53 Warning Speed High to the same value as set in 4-13 Motor Speed High Limit [RPM].
If a different value is needed in 4-53 Warning Speed High, it must be set after programming of 4-13 Motor Speed High Limit [RPM]!

| 4-56 Warning Feedback Low |  |  |  |
| :---: | :---: | :---: | :---: |
| Range: |  |  | Function: |
| $\begin{aligned} & -9999 \\ & \hline \text { Proce } \end{aligned}$ | $99.999$ | [-999999.999 par. 4-57 <br> ProcessCtrlUnit] | Enter the lower feedback limit. When the feedback falls below this limit, the display reads Feedb Low. The signal outputs can be programmed to produce a status signal on terminal 27 or 29 and on relay output 01 or 02. |
| 4-57 Warning Feedback High |  |  |  |
| Range: |  |  | Function: |
| 999999.999 <br> ProcessCtrIUnit* |  | [par. 4-56 - <br> 999999.999 <br> ProcessCtrlUnit] | Enter the upper feedback limit. When the feedback exceeds this limit, the display reads Feedb High. The signal outputs can be programmed to produce a status signal on terminal 27 or 29 and on relay output 01 or 02. |
| 4-64 Semi-Auto Bypass Set-up |  |  |  |
| Option: |  | Function: |  |
| [0] * | Off | No function |  |
| [1] | Enabled | Starts the Semi-Automatic Bypass set-up and continue with the procedure described above. |  |

## 5-01 Terminal 27 Mode

Option: Function:

| $[0] *$ | Input | Defines terminal 27 as a digital input. |
| :--- | :--- | :--- |
| $[1]$ | Output | Defines terminal 27 as a digital output. |

Please note that this parameter cannot be adjusted while the motor is running.

## 5-02 Terminal 29 Mode

| Option: |  | Function: |
| :--- | :--- | :--- |
| $[0] *$ | Input | Defines terminal 29 as a digital input. |
| $[1]$ | Output | Defines terminal 29 as a digital output. |

This parameter cannot be adjusted while the motor is running.

### 6.1.4 5-1* Digital Inputs

Parameters for configuring the input functions for the input terminals.
The digital inputs are used for selecting various functions in the frequency converter. All digital inputs can be set to the following functions:

| Digital input function | Select | Terminal |
| :---: | :---: | :---: |
| No operation | [0] | All *terminal 19, 32, 33 |
| Reset | [1] | All |
| Coast inverse | [2] | 27 |
| Coast and reset inverse | [3] | All |
| DC-brake inverse | [5] | All |
| Stop inverse | [6] | All |
| External interlock | [7] | All |
| Start | [8] | All *terminal 18 |
| Latched start | [9] | All |
| Reversing | [10] | All |
| Start reversing | [11] | All |
| Jog | [14] | All *terminal 29 |
| Preset reference on | [15] | All |
| Preset ref bit 0 | [16] | All |
| Preset ref bit 1 | [17] | All |
| Preset ref bit 2 | [18] | All |
| Freeze reference | [19] | All |
| Freeze output | [20] | All |
| Speed up | [21] | All |
| Speed down | [22] | All |
| Set-up select bit 0 | [23] | All |
| Set-up select bit 1 | [24] | All |
| Pulse input | [32] | terminal 29, 33 |
| Ramp bit 0 | [34] | All |
| Mains failure inverse | [36] | All |
| Fire mode | [37] | All |
| Run Permissive | [52] | All |
| Hand start | [53] | All |
| Auto start | [54] | All |
| DigiPot Increase | [55] | All |
| DigiPot Decrease | [56] | All |
| DigiPot Clear | [57] | All |
| Counter A (up) | [60] | 29,33 |
| Counter A (down) | [61] | 29, 33 |
| Reset Counter A | [62] | All |
| Counter B (up) | [63] | 29, 33 |
| Counter B (down) | [64] | 29, 33 |
| Reset Counter B | [65] | All |
| Sleep Mode | [66] | All |
| Reset Maintenance Word | [78] | All |
| Lead Pump Start | [120] | All |
| Lead Pump Alternation | [121] | All |
| Pump 1 Interlock | [130] | All |
| Pump 2 Interlock | [131] | All |
| Pump 3 Interlock | [132] | All |

## 5-12 Terminal 27 Digital Input

Same options and functions as par. 5-1*, except for Pulse input. Option:

Function:

| $[0] *$ | No operation |  |
| :--- | :--- | :--- |

## 5-13 Terminal 29 Digital Input

Same options and functions as par. 5-1*.

## 5-14 Terminal 32 Digital Input

Same options and functions as par. 5-1*, except for Pulse input.
Option:
Function:

Same options and functions as par. 5-1* Digital Inputs.
Option:
Function:

| $[0] *$ | No operation |  |
| :--- | :--- | :--- |

## 5-40 Function Relay

Array [8]
(Relay 1 [0], Relay 2 [1]
Option MCB 105: Relay 7 [6], Relay 8 [7] and Relay 9 [8])
Select options to define the function of the relays.
The selection of each mechanical relay is realised in an array parameter.

| Option: |  | Function: |
| :--- | :--- | :--- |
| $[0]^{*}$ | No operation |  |
| $[1]$ | Control ready |  |
| $[2]$ | Drive ready |  |
| $[3]$ | Drive rdy/rem ctrl |  |
| $[4]$ | Standby / no warning |  |
| $[5]^{*}$ | Running | Default setting for relay 2. |
| $[6]$ | Running / no warning |  |
| $[8]$ | Run on ref/no warn |  |
| $[9]^{*}$ | Alarm | Default setting for relay 1. |
| $[10]$ | Alarm or warning |  |
| $[11]$ | At torque limit |  |
| $[12]$ | Out of current range |  |
| $[13]$ | Below current, low |  |
| $[14]$ | Above current, high |  |
| $[15]$ | Out of speed range |  |
| $[16]$ | Below speed, low |  |
| $[17]$ | Above speed, high |  |
| $[18]$ | Out of feedb. range |  |
| $[19]$ | Below feedback, low |  |
| $[20]$ | Above feedback, high |  |
| $[21]$ | Thermal warning |  |
| $[25]$ | Reverse |  |
| $[26]$ | Bus OK |  |
| $[27]$ | Torque limit \& stop |  |
| $[28]$ | Brake, no brake war |  |
| $[29]$ | Brake ready, no fault |  |
|  |  |  |

## 5-40 Function Relay

Array [8]
Relay 1 [0], Relay 2 [1]
Option MCB 105: Relay 7 [6], Relay 8 [7] and Relay 9 [8]).
Select options to define the function of the relays.
The selection of each mechanical relay is realised in an array parameter.

Option:
Function:

| [30] | Brake fault (IGBT) |  |
| :---: | :---: | :---: |
| [35] | External Interlock |  |
| [36] | Control word bit 11 |  |
| [37] | Control word bit 12 |  |
| [40] | Out of ref range |  |
| [41] | Below reference, low |  |
| [42] | Above ref, high |  |
| [45] | Bus ctrl. |  |
| [46] | Bus ctrl, 1 if timeout |  |
| [47] | Bus ctrl, 0 if timeout |  |
| [60] | Comparator 0 |  |
| [61] | Comparator 1 |  |
| [62] | Comparator 2 |  |
| [63] | Comparator 3 |  |
| [64] | Comparator 4 |  |
| [65] | Comparator 5 |  |
| [70] | Logic rule 0 |  |
| [71] | Logic rule 1 |  |
| [72] | Logic rule 2 |  |
| [73] | Logic rule 3 |  |
| [74] | Logic rule 4 |  |
| [75] | Logic rule 5 |  |
| [80] | SL digital output A |  |
| [81] | SL digital output B |  |
| [82] | SL digital output C |  |
| [83] | SL digital output D |  |
| [84] | SL digital output E |  |
| [85] | SL digital output F |  |
| [160] | No alarm |  |
| [161] | Running reverse |  |
| [165] | Local ref active |  |
| [166] | Remote ref active |  |
| [167] | Start command act. |  |
| [168] | Hand / Off |  |
| [169] | Auto mode |  |
| [180] | Clock Fault |  |
| [181] | Prev. Maintenance |  |
| [189] | External Fan Control |  |
| [190] | No-Flow |  |
| [191] | Dry Pump |  |
| [192] | End Of Curve |  |
| [193] | Sleep Mode |  |
| [194] | Broken Belt |  |
| [195] | Bypass Valve Control |  |
| [196] | Fire Mode |  |
| [197] | Fire Mode was Act. |  |

## 5-40 Function Relay

Array [8]
(Relay 1 [0], Relay 2 [1]
Option MCB 105: Relay 7 [6], Relay 8 [7] and Relay 9 [8]).
Select options to define the function of the relays.
The selection of each mechanical relay is realised in an array parameter.

| Option: |  | Function: |
| :--- | :--- | :--- |
| $[198]$ | Drive Bypass |  |
| $[211]$ | Cascade Pump 1 |  |
| $[212]$ | Cascade Pump 2 |  |
| $[213]$ | Cascade Pump 3 |  |

| 6-00 Live Zero Timeout Time |  |  |
| :--- | :--- | :--- |
| Range: | Function: |  |
| $10 \mathrm{~s}^{*}$ | $[1-$ <br> $99 \mathrm{~s}]$ | Enter the Live Zero Time-out time period. Live Zero <br> Time-out Time is active for analog inputs, i.e. <br> terminal 53 or terminal 54, used as reference or <br> feedback sources. If the reference signal value <br> associated with the selected current input falls <br> below 50\% of the value set in 6-10 Terminal 53 Low <br> Voltage, 6-12 Terminal 53 Low Current, 6-20 Terminal <br> 54 Low Voltage or 6-22 Terminal 54 Low Current for a <br> time period longer than the time set in 6-00 Live <br> Zero Timeout Time, the function selected in 6-01 Live <br> Zero Timeout Function will be activated. |

| 6-01 Live Zero Timeout Function |  |  |
| :---: | :---: | :---: |
| Option: |  | Function: |
|  |  | Select the time-out function. The function set in 6-01 Live Zero Timeout Function will be activated if the input signal on terminal 53 or 54 is below $50 \%$ of the value in 6-10 Terminal 53 Low Voltage, 6-12 Terminal 53 Low Current, 6-20 Terminal 54 Low Voltage or 6-22 Terminal 54 Low Current for a time period defined in 6-00 Live Zero Timeout Time. If several time-outs occur simultaneously, the frequency converter prioritises the time-out functions as follows: <br> 1. 6-01 Live Zero Timeout Function <br> 2. $8-04$ Control Timeout Function <br> The output frequency of the frequency converter can be: <br> - [1] frozen at the present value <br> - [2] overruled to stop <br> - [3] overruled to jog speed <br> - [4] overruled to max. speed <br> - [5] overruled to stop with subsequent trip |
| [0] * | Off |  |
| [1] | Freeze output |  |
| [2] | Stop |  |

## 6-01 Live Zero Timeout Function

Option:
Function:

| $[3]$ | Jogging |  |
| :--- | :--- | :--- |
| $[4]$ | Max. speed |  |
| $[5]$ | Stop and <br> trip |  |

## 6-10 Terminal 53 Low Voltage

| Range: | Function: |  |
| :---: | :--- | :--- |
| 0.07 V | $[0.00-$ par. <br> $6-11 \mathrm{~V}]$ | Enter the low voltage value. This analog <br> input scaling value should correspond to <br> the low reference/feedback value set in <br> $6-14$ Terminal 53 Low Ref./Feedb. Value. |

## 6-11 Terminal 53 High Voltage

| Range: |  | Function: |
| :--- | :--- | :--- |
| $10.00 \mathrm{~V}^{*}$ | $[p a r .6-10-$ <br> $10.00 \mathrm{~V}]$ | Enter the high voltage value. This analog <br> input scaling value should correspond to <br> the high reference/feedback value set in <br> $6-15$ Terminal 53 High Ref./Feedb. Value. |

## 6-14 Terminal 53 Low Ref./Feedb. Value

| Range: | Function: |  |
| :---: | :---: | :--- |
| 0.000 * | [-999999.999- | Enter the analog input scaling value |
|  | $999999.999]$ | that corresponds to the low <br> voltage/low current set in |
|  |  | 6-10 Terminal 53 Low Voltage and <br> 6-12 Terminal 53 Low Current. |

## 6-15 Terminal 53 High Ref./Feedb. Value

| Range: | Function: |  |
| :--- | :--- | :--- |
| Size related* | $[-999999.999-$ <br> $999999.999]$ | Enter the analog input scaling <br> value that corresponds to the <br> high voltage/high current value <br> set in 6-11 Terminal 53 High <br> Voltage and 6-13 Terminal 53 <br> High Current. |

| 6-16 Terminal 53 Filter Time Constant |  |
| :--- | :--- | :--- |
| Range: | Function: |$|$| $0.001 \mathrm{~s}^{*}$ | $[0.001-$ <br> $10.000 \mathrm{~s}]$ |
| :--- | :--- |
| Enter the time constant. This is a first-order <br> digital low pass filter time constant for <br> suppressing electrical noise in terminal 53. <br> A high time constant value improves <br> dampening but also increases the time <br> delay through the filter. <br> This parameter cannot be adjusted while <br> the motor is running. |  |

## 6-17 Terminal 53 Live Zero

| Option: |  | Function: |
| :--- | :--- | :--- |
|  |  | This parameter makes it possible to disable the Live <br> Zero monitoring. E.g. to be used if the analog <br> outputs are used as part of a de-central I/O system <br> (e.g. when not as part of any frequency converter <br> related control functions, but feeding a Building <br> Management system with data). |
| $[0]$ | Disabled |  |
| $[1] *$ | Enabled |  |

## 6-20 Terminal 54 Low Voltage

| Range: |  | Function: |  |
| :---: | :--- | :--- | :---: |
| $0.07 \mathrm{~V}^{*}$ | $[0.00-$ par. <br> $6-21 \mathrm{~V}]$ | Enter the low voltage value. This analog <br> input scaling value should correspond to <br> the low reference/feedback value, set in <br> $6-24$ Terminal 54 Low Ref./Feedb. Value. |  |

| 6-21 Terminal 54 High Voltage |  |  |
| :--- | :--- | :--- |
| Range: | Function: |  |
| $10.00 \mathrm{~V}^{*}$ | [par. 6-20- <br> $10.00 \mathrm{~V}]$ | Enter the high voltage value. This analog <br> input scaling value should correspond to <br> the high reference/feedback value set in <br> 6-25 Terminal 54 High Ref./Feedb. Value. |

| 6-24 Terminal 54 Low Ref./Feedb. Value |  |  |
| :--- | :--- | :--- |
| Range: | Function: |  |
| $0.000 *$ | $[-999999.999-$ <br> $999999.999]$ | Enter the analog input scaling value <br> that corresponds to the low voltage/ <br> low current value set in <br> 6-20 Terminal 54 Low Voltage and <br> 6-22 Terminal 54 Low Current. |

| 6-25 Terminal 54 High Ref./Feedb. Value |  |  |
| :--- | :--- | :--- |
| Range: | Function: |  |
| $100.000^{*}$ | $[-999999.999-$ <br> $999999.999]$ | Enter the analog input scaling <br> value that corresponds to the high <br> voltage/high current value set in <br> 6-21 Terminal 54 High Voltage and <br> 6-23 Terminal 54 High Current. |

| 6-26 Terminal 54 Filter Time Constant |  |  |
| :--- | :--- | :--- |
| Range: | Function: |  |
| $0.001 \mathrm{~s}^{*}$ | $[0.001-$ <br> $10.000 \mathrm{~s}]$ | Enter the time constant. This is a first-order <br> digital low pass filter time constant for <br> suppressing electrical noise in terminal 54. <br> A high time constant value improves <br> dampening but also increases the time <br> delay through the filter. <br> This parameter cannot be adjusted while <br> the motor is running. |

| 6-27 Terminal 54 Live Zero |  |  |
| :--- | :--- | :--- |
| Option: |  | Function: |
| This parameter makes it possible to disable the Live |  |  |
| Zero monitoring. E.g. to be used if the analog |  |  |
| outputs are used as part of a de-central I/O system |  |  |
| (e.g. when not as part of any frequency converter |  |  |
| related control functions, but feeding a Building |  |  |
| Management System with data). |  |  |

| 6-50 Terminal 42 Output |  |  |
| :---: | :---: | :---: |
| Option: |  | Function: |
|  |  | Select the function of Terminal 42 as an analog current output. A motor current of 20 mA corresponds to $I_{\text {max }}$. |
| [0] * | No operation |  |
| [100] | Output freq. 0-100 | : 0-100 Hz, (0-20 mA) |
| [101] | Reference MinMax | : Minimum reference - Maximum reference, (0-20 mA) |
| [102] | Feedback +-200\% | $\begin{aligned} & \text { : -200\% to }+200 \% \text { of } 20-14 \text { Maximum } \\ & \text { Reference/Feedb., (0-20 mA) } \end{aligned}$ |
| [103] | Motor cur. 0-Imax | : 0 - Inverter Max. Current (16-37 Inv. Max. Current), (0-20 mA) |
| [104] | Torque 0-Tlim | : 0 - Torque limit (4-16 Torque Limit Motor Mode), (0-20 mA) |
| [105] | Torque 0-Tnom | : 0 - Motor rated torque, (0-20 mA) |
| [106] | Power 0-Pnom | : 0 - Motor rated power, (0-20 mA) |
| [107] * | Speed 0-HighLim | : 0 - Speed High Limit (4-13 Motor Speed High Limit [RPM] and 4-14 Motor Speed High Limit [Hz]), (0-20 mA) |
| [113] | Ext. Closed Loop 1 | : 0-100\%, (0-20 mA) |
| [114] | Ext. Closed Loop 2 | : 0-100\%, (0-20 mA) |
| [115] | Ext. Closed Loop 3 | : 0-100\%, (0-20 mA) |
| [130] | $\begin{aligned} & \text { Out frq 0-100 } \\ & 4-20 \mathrm{~mA} \end{aligned}$ | : 0-100 Hz |
| [131] | Reference 4-20mA | : Minimum Reference - Maximum Reference |
| [132] | Feedback 4-20mA | : -200\% to $+200 \%$ of 20-14 Maximum Reference/Feedb. |

## 6-50 Terminal 42 Output

| Option: |  | Function: |
| :--- | :--- | :--- |
| $[133]$ | Motor cur. 4-20mA | $: 0-$ Inverter Max. Current (16-37 Inv. <br> Max. Current) |
| $[134]$ | Torq.0-lim 4-20 <br> mA | $: 0$ - Torque limit (4-16 Torque Limit <br> Motor Mode) |
| $[135]$ | Torq.0-nom <br> $4-20 \mathrm{~mA}$ | $: 0$ - Motor rated torque |
| $[136]$ | Power 4-20mA | $: 0-$ Motor rated power |
| $[137]$ | Speed 4-20mA | $: 0-$ Speed High Limit (4-13 and 4-14) |
| $[139]$ | Bus ctrl. | $: 0-100 \%,(0-20 \mathrm{~mA})$ |
| $[140]$ | Bus ctrl. 4-20 mA | $: 0-100 \%$ |
| $[141]$ | Bus ctrl t.o. | $: 0-100 \%,(0-20 \mathrm{~mA})$ |
| $[142]$ | Bus ctrl t.o. <br> $4-20 \mathrm{~mA}$ | $: 0-100 \%$ |
| $[143]$ | Ext. CL 1 4-20mA | $: 0-100 \%$ |
| $[144]$ | Ext. CL 2 4-20mA | $: 0-100 \%$ |
| $[145]$ | Ext. CL 3 4-20mA | $: 0-100 \%$ |

## NOTE

Values for setting the Minimum Reference is found in open loop 3-02 Minimum Reference and for closed loop 20-13 Minimum Reference/Feedb. - values for maximum reference for open loop is found in 3-03 Maximum Reference and for closed loop 20-14 Maximum Reference/Feedb..

| 6-51 Terminal 42 Output Min Scale |  |  |
| :--- | :--- | :--- |
| Range: | Function: |  |
| $0.00 \%^{*}$ | $[0.00-200.00$ | Scale for the minimum output $(0$ or 4 mA$)$ <br> of the analogue signal at terminal 42. <br> Set the value to be the percentage of the <br> full range of the variable selected in <br> $6-50$ Terminal 42 Output. |

| 6-52 Terminal 42 Output Max Scale |  |  |
| :--- | :--- | :--- |
| Range: |  | Function: |
| 100.00 <br> $\%^{*}$ | -0.00 | Scale for the maximum output $(20 \mathrm{~mA})$ of the <br> analog signal at terminal 42. <br> Set the value to be the percentage of the full range <br> of the variable selected in $6-50$ Terminal 42 <br> Output. |

## 6-52 Terminal 42 Output Max Scale

Range:
Function:

## EXAMPLE 1:

Variable value $=$ OUTPUT FREQUENCY, range $=0-100 \mathrm{~Hz}$
Range needed for output $=0-50 \mathrm{~Hz}$
Output signal 0 or 4 mA is needed at 0 Hz ( $0 \%$ of range) - set 6-51 Terminal 42 Output Min Scale to 0\%
Output signal 20 mA is needed at 50 Hz ( $50 \%$ of range) - set 6-52 Terminal 42 Output Max Scale to $50 \%$

EXAMPLE 2:
Variable= FEEDBACK, range $=-200 \%$ to $+200 \%$
Range needed for output= $0-100 \%$
Output signal 0 or 4 mA is needed at $0 \%$ ( $50 \%$ of range) - set 6-51 Terminal 42 Output Min Scale to 50\%
Output signal 20 mA is needed at $100 \%$ ( $75 \%$ of range) - set 6-52 Terminal 42 Output Max Scale to 75\%

EXAMPLE 3:
Variable value $=$ REFERENCE, range $=$ Min ref - Max ref Range needed for output= Min ref (0\%) - Max ref (100\%), 0-10 mA
Output signal 0 or 4 mA is needed at Min ref - set 6-51 Terminal 42 Output Min Scale to 0\% Output signal 10 mA is needed at Max ref ( $100 \%$ of range) set 6-52 Terminal 42 Output Max Scale to $200 \%$
( $20 \mathrm{~mA} / 10 \mathrm{~mA} \times 100 \%=200 \%$ ).

| Option: |  | Function: |
| :--- | :--- | :--- | \left\lvert\, \(\left.\begin{array}{l}Select the inverter switching frequency. Changing <br>

the switching frequency can help to reduce <br>
acoustic noise from the motor. <br>
NOTE <br>
The output frequency value of the frequency <br>
converter must never exceed 1/10 of the <br>
switching frequency. When the motor is <br>
running, adjust the switching frequency in <br>
14-01 Switching Frequency until the motor is <br>
as noiseless as possible. See also <br>
14-00 Switching Pattern and the section <br>
Derating.\end{array}\right.\right\}\)

## 20-00 Feedback 1 Source

| Option: |  | Function: |  |
| :--- | :--- | :--- | :---: |
|  |  | Up to three different feedback signals <br> can be used to provide the feedback <br> signal for the frequency converter's <br> PID Controller. <br> This parameter defines which input <br> will be used as the source of the first <br> feedback signal. <br> Analog input X30/11 and Analog <br> input X30/12 refer to inputs on the <br> optional General Purpose I/O board. |  |
| $[0]$ | No function |  |  |
| $[1]$ | Analog input 53 |  |  |
| $[2] *$ | Analog input 54 |  |  |
| $[3]$ | Pulse input 29 |  |  |
| $[4]$ | Pulse input 33 |  |  |
| $[7]$ | Analog input X30/11 |  |  |
| $[8]$ | Analog input X30/12 |  |  |
| $[9]$ | Analog Input X42/1 |  |  |
| $[10]$ | Analog Input X42/3 |  |  |
| $[11]$ | Analog Input X42/5 |  |  |
| $[15]$ | Analog Input X48/2 |  |  |

| 20-00 Feedback 1 Source |  |  |
| :---: | :--- | :--- |
| Option: |  | Function: |
| $[100]$ | Bus feedback 1 |  |
| $[101]$ | Bus feedback 2 |  |
| $[102]$ | Bus feedback 3 |  |
| $[104]$ | Sensorless Flow | Requires set up by MCT10 with <br> sensorless specific plug in. |
| $[105]$ | Sensorless Pressure | Requires set up by MCT10 with <br> sensorless specific plug in. |

## NOTE

If a feedback is not used, its source must be set to No Function [0]. 20-20 Feedback Function determines how the three possible feedbacks will be used by the PID Controller.

| 20-01 Feedback 1 Conversion |  |  |
| :---: | :---: | :---: |
| Option: |  | Function: |
|  |  | This parameter allows a conversion function to be applied to Feedback 1. |
| $\overline{[0]}$ | Linear | Linear [0] has no effect on the feedback. |
| [1] | Square root | Square root [1] is commonly used when a pressure sensor is used to provide flow feedback (( flow $\propto \sqrt{\text { pressure })})$. |
| [2] | Pressure to temperature | Pressure to temperature [2] is used in compressor applications to provide temperature feedback using a pressure sensor. The temperature of the refrigerant is calculated using the following formula: $\text { Temperature }=\frac{A 2}{(\ln (P e+1)-A 1)}-A 3$ <br> where A1, A2 and A3 are refrigerant-specific constants. The refrigerant must be selected in 20-30 Refrigerant. 20-21 Setpoint 1 through 20-23 Setpoint 3 allow the values of A1, A2 and A3 to be entered for a refrigerant that is not listed in 20-30 Refrigerant. |
| [3] | Pressure to flow |  |
| [4] | Velocity to flow |  |

| 20-03 Feedback 2 Source |  |  |
| :--- | :--- | :--- |
| Option: |  | See 20-00 Feedback 1 Source for <br> details. |
|  |  |  |
| $[0] *$ | No function |  |
| $[1]$ | Analog input 53 |  |
| $[2]$ | Analog input 54 |  |
| $[3]$ | Pulse input 29 |  |
| $[4]$ | Pulse input 33 |  |
| $[7]$ | Analog input X30/11 |  |
| $[8]$ | Analog input X30/12 |  |
| $[9]$ | Analog Input X42/1 |  |

| 20-03 Feedback 2 Source |  |  |
| :--- | :--- | :--- |
| Option: |  | Function: |
| $[10]$ | Analog Input X42/3 |  |
| $[11]$ | Analog Input X42/5 |  |
| $[15]$ | Analog Input X48/2 |  |
| $[100]$ | Bus feedback 1 |  |
| $[101]$ | Bus feedback 2 |  |
| $[102]$ | Bus feedback 3 |  |

## 20-04 Feedback 2 Conversion

## Option:

Function:

|  |  | See 20-01 Feedback 1 Conversion for <br> details. |
| :--- | :--- | :--- |
| $[0] *$ | Linear |  |
| $[1]$ | Square root |  |
| $[2]$ | Pressure to temperature |  |
| $[3]$ | Pressure to flow |  |
| $[4]$ | Velocity to flow |  |

## 20-06 Feedback 3 Source

Option: Function:

|  |  | See 20-00 Feedback 1 Source for details. |
| :--- | :--- | :--- |
| 20-07 Feedback 3 Conversion |  |  |
| Option: |  |  |
| Function: |  |  |
|  |  | See 20-01 Feedback 1 Conversion for <br> details. |
| $[0] *$ | Linear |  |
| $[1]$ | Square root |  |
| $[2]$ | Pressure to temperature |  |
| $[3]$ | Pressure to flow |  |
| $[4]$ | Velocity to flow |  |

## 20-20 Feedback Function

Function:
This parameter determines how the three possible feedbacks will be used to control the output frequency of the frequency converter.

| [0] | Sum | Sum [0] sets up the PID Controller to use the sum <br> of Feedback 1, Feedback 2 and Feedback 3 as the |
| :--- | :--- | :--- | feedback.

## NOTE

Any unused feedbacks must be set to No Function in 20-00 Feedback 1 Source, 20-03 Feedback 2 Source, or 20-06 Feedback 3 Source.

The sum of Setpoint 1 and any other references that are enabled (see par. group 3-1*) will be used as the PID Controller's set-point reference.
[1] Difference Difference [1] sets up the PID controller to use the difference between Feedback 1 and Feedback 2 as the feedback. Feedback 3 will not be used with

| 20-20 Feedback Function |  |  |
| :---: | :---: | :---: |
| Option: |  | Function: |
|  |  | this selection. Only Setpoint 1 will be used. The sum of Setpoint 1 and any other references that are enabled (see par. group 3-1*) will be used as the PID controller's set-point reference. |
| [2] | Average | Average [2] sets up the PID Controller to use the average of Feedback 1, Feedback 2 and Feedback 3 as the feedback. <br> NOTE <br> Any unused feedbacks must be set to No Function in 20-00 Feedback 1 Source, 20-03 Feedback 2 Source, or 20-06 Feedback 3 Source. The sum of Setpoint 1 and any other references that are enabled (see par. group 3-1*) will be used as the PID Controller's setpoint reference. |
| [3] | Minimum | Minimum [3] sets up the PID Controller to compare Feedback 1, Feedback 2 and Feedback 3 and use the lowest value as the feedback. <br> NOTE <br> Any unused feedbacks must be set to No Function in 20-00 Feedback 1 Source, 20-03 Feedback 2 Source, or 20-06 Feedback 3 Source. Only setpoint 1 will be used. The sum of Setpoint 1 and any other references that are enabled (see par. group 3-1*) will be used as the PID Controller's setpoint reference. |
| [4] | Maximum | Maximum [4] sets up the PID Controller to compare Feedback 1, Feedback 2 and Feedback 3 and use the highest value as the feedback. <br> NOTE <br> Any unused feedbacks must be set to No Function in 20-00 Feedback 1 Source, 20-03 Feedback 2 Source, or 20-06 Feedback 3 Source. <br> Only Setpoint 1 will be used. The sum of Setpoint 1 and any other references that are enabled (see par. group 3-1*) will be used as the PID Controller's setpoint reference. |
| [5] | Multi Setpoint Min | Multi-setpoint minimum [5] sets up the PID Controller to calculate the difference between Feedback 1 and Setpoint 1, Feedback 2 and Setpoint 2, and Feedback 3 and Setpoint 3 . It will use the feedback/setpoint pair in which the feedback is the farthest below its corresponding setpoint reference. If all feedback signals are above their corresponding setpoints, the PID Controller will use the feedback/setpoint pair in |

| 20-20 Feedback Function |  |  |
| :--- | :--- | :--- |
| Option: | Function: <br> which the difference between the feedback and <br> setpoint is the least. <br> NOTE <br> If only two feedback signals are used, the <br> feedback that is not to be used must be set <br> to No Function in 20-00 Feedback 1 Source, <br> 20-03 Feedback 2 Source or 20-06 Feedback 3 <br> Source. Note that each setpoint reference <br> will be the sum of its respective parameter <br> value (20-21 Setpoint 1, 20-22 Setpoint 2 and <br> $20-23$ Setpoint 3) and any other references <br> that are enabled (see par. group 3-1*). |  |
| [6] | Multi <br> Setpoint | Multi-setpoint maximum [6] sets up the PID <br> Controller to calculate the difference between <br> Feedback 1 and Setpoint 1, Feedback 2 and <br> Setpoint 2, and Feedback 3 and Setpoint 3. It will |
| Mse the feedback/setpoint pair in which the |  |  |
| feedback is farthest above its corresponding |  |  |
| setpoint reference. If all feedback signals are |  |  |
| below their corresponding setpoints, the PID |  |  |
| Controller will use the feedback/setpoint pair in |  |  |
| which the difference between the feedback and |  |  |
| the setpoint reference is the least. |  |  |$|$

## NOTE

Any unused feedback must be set to "No function" in its Feedback Source parameter: 20-00 Feedback 1 Source, 20-03 Feedback 2 Source or 20-06 Feedback 3 Source.

The feedback resulting from the function selected in 20-20 Feedback Function will be used by the PID Controller to control the output frequency of the frequency converter. This feedback can also be shown on the frequency converter's display, be used to control a frequency converter's analog output, and be transmitted over various serial communication protocols.

The frequency converter can be configured to handle multi zone applications. Two different multi zone applications are supported:

- Multi zone, single setpoint
- Multi zone, multi setpoint

The difference between the two is illustrated by the following examples:

## Example 1 - Multi zone, single setpoint

In an office building, a VAV (variable air volume) IVS 102 system must ensure a minimum pressure at selected VAV boxes. Due to the varying pressure losses in each duct, the pressure at each VAV box cannot be assumed to be the same. The minimum pressure required is the same for all VAV boxes. This control method can be set up by setting 20-20 Feedback Function to option [3], Minimum, and entering the desired pressure in 20-21 Setpoint 1. The PID Controller will increase the speed of the fan if any one feedback is below the setpoint and decrease the speed of the fan if all feedbacks are above the setpoint.

Example 2 - Multi zone, multi setpoint
The previous example can be used to illustrate the use of multi zone, multi setpoint control. If the zones require different pressures for each VAV box, each setpoint may be specified in 20-21 Setpoint 1, 20-22 Setpoint 2 and 20-23 Setpoint 3 . By selecting Multi setpoint minimum, [5], in 20-20 Feedback Function, the PID Controller will increase the speed of the fan if any one of the feedbacks is below its setpoint and decrease the speed of the fan if all feedbacks are above their individual setpoints.

| 20-21 Setpoint 1 |  |  |
| :---: | :---: | :---: |
| Range: |  | Function: |
| 0.000 <br> ProcessCtrlUnit* | [-999999.999 - <br> 999999.999 <br> ProcessCtrIUnit] | Setpoint 1 is used in Closed Loop Mode to enter a setpoint reference that is used by the frequency converter's PID Controller. See the description of 20-20 Feedback Function. <br> NOTE <br> Setpoint reference entered here is added to any other references that are enabled (see par. group 3-1*). |

| 20-22 Setpoint 2 | Function: |  |
| :--- | :--- | :--- |
| Range: | $\begin{array}{l}\text { [-999999.999 - } \\ \text { 999999.999 } \\ \text { ProcessCtrlUnit] }\end{array}$ | $\begin{array}{l}\text { Setpoint } 2 \text { is used in Closed } \\ \text { Loop Mode to enter a } \\ \text { Setpoint reference that } \\ \text { ProcessCtrlUnit } \\ \text { may be used by the } \\ \text { frequency converter's PID } \\ \text { Controller. See the } \\ \text { description of Feedback }\end{array}$ |
| Function, 20-20 Feedback |  |  |
| Function. |  |  |$\}$

## NOTE

The set-point reference entered here is added to any other references that are enabled (see par. group 3-1*).

## 20-81 PID Normal/ Inverse Control

## Option: Function:

| $[0]$ * | Normal | Normal [0] causes the frequency converter's output <br> frequency to decrease when the feedback is greater <br> than the setpoint reference. This is common for <br> pressure-controlled supply fan and pump <br> applications. |
| :--- | :--- | :--- |
| $[1]$ | Inverse | Inverse [1] causes the frequency converter's output <br> frequency to increase when the feedback is greater <br> than the setpoint reference. This is common for <br> temperature-controlled cooling applications, such as <br> cooling towers. |

| 20-93 PID Proportional Gain |  |
| :--- | :--- |
| Range: |  |
| $0.50^{*}$ | $[0.00-10.00]$ |

If (Error $x$ Gain) jumps with a value equal to what is set in 20-14 Maximum Reference/Feedb. the PID controller will try to change the output speed equal to what is set in 4-13 Motor Speed High Limit [RPM] / 4-14 Motor Speed High Limit [Hz] but in practice of course limited by this setting.
The proportional band (error causing output to change from $0-100 \%$ ) can be calculated by means of the formula:
$\left(\frac{1}{\text { Proportional Gain }}\right) \times($ Max Reference $)$

## NOTE

Always set the desired for 20-14 Maximum Reference/Feedb. before setting the values for the PID controller in par. group 20-9*.

| 20-94 PID Integral Time |  |  |
| :---: | :---: | :---: |
| Rang |  | Function: |
| $\begin{array}{\|l} \hline 20.00 \\ s^{*} \end{array}$ | $\begin{array}{\|c\|} \hline[0.01- \\ 10000.00 \mathrm{~s}] \end{array}$ | Over time, the integrator accumulates a contribution to the output from the PID controller as long as there is a deviation between the Reference/Setpoint and feedback signals. The contribution is proportional to the size of the deviation. This ensures that the deviation (error) approaches zero. <br> Quick response on any deviation is obtained when the integral time is set to a low value. Setting it too low, however, may cause the control to become unstable. <br> The value set, is the time needed for the integrator to add the same contribution as the proportional part for a certain deviation. If the value is set to 10,000 , the controller will act as a pure proportional controller with a P band based on the value set in 20-93 PID |

| 20-94 PID Integral Time |  |
| :--- | :--- |
| Range: | Proportional Gain. When no deviation is <br> present, the output from the proportional <br> controller will be 0. |

| 22-21 Low Power Detection |  |  |
| :--- | :--- | :--- |
| Option: |  | Function: |
| $[0]$ * | Disabled |  |
| $[1]$ | Enabled | If selecting Enabled, the Low Power Detection <br> commissioning must be carried out in order to set <br> the parameters in group 22-3* for proper <br> operation! |

| 22-22 Low Speed Detection |  |  |
| :--- | :--- | :--- |
| Option: |  | Function: |
| $[0]$ * | Disabled |  |
| $[1]$ | Enabled | Select Enabled for detecting when the motor <br> operates with a speed as set in 4-11 Motor Speed <br> Low Limit [RPM] or 4-12 Motor Speed Low Limit <br> [Hz]. |

## 22-23 No-Flow Function

Common actions for Low Power Detection and Low Speed Detection (Individual selections not possible).

| Option: |  | Function: |
| :--- | :--- | :--- |
| [0] * | Off |  |
| [1] | Sleep Mode | The drive will enter Sleep Mode and stop when <br> a No Flow condition is detected. See parameter <br> group 22-4* for programming options for Sleep <br> Mode. |
| [2] | Warning | The drive will continue to run, but activate a <br> No-Flow Warning [W92]. A drive digital output <br> or a serial communication bus can <br> communicate a warning to other equipment. |
| [3] | Alarm | The drive will stop running and activate a No- <br> Flow Alarm [A 92]. A drive digital output or a <br> serial communication bus can communicate an <br> alarm to other equipment. |

## NOTE

Do not set 14-20 Reset Mode, to [13] Infinite auto reset, when 22-23 No-Flow Functionis set to [3] Alarm. Doing so will cause the drive to continuously cycle between running and stopping when a No Flow condition is detected.

## NOTE

If the drive is equipped with a constant speed bypass with an automatic bypass function that starts the bypass if the drive experiences a persistent alarm condition, be sure to disable the bypass's automatic bypass function, if [3] Alarm is selected as the No-Flow Function.

| 22-24 |  | No-Flow Delay |
| :--- | :--- | :--- |
| Range: |  | Function: |
| $10 \mathrm{~s}^{*}$ | $[1-600 \mathrm{~s}]$ | Set the time Low Power/Low Speed must stay <br> detected to activate signal for actions. If <br> detection disappears before run out of the <br> timer, the timer will be reset. |

| 22-26 Dry Pump Function |  |  |
| :--- | :--- | :--- |
| Select desired action for dry pump operation. <br> Option: |  |  |
| [0] * | Off | Function: |$|$| [1] | Warning | The drive will continue to run, but activate a <br> Dry pump warning [W93]. A drive digital <br> output or a serial communication bus can <br> communicate a warning to other equipment. |
| :--- | :--- | :--- |
| [2] | Alarm | The drive will stop running and activate a Dry <br> pump alarm [A93]. A drive digital output or a <br> serial communication bus can communicate <br> an alarm to other equipment. |
| [3] | Man. Reset <br> Alarm | The drive will stop running and activate a Dry <br> pump alarm [A93]. A drive digital output or a <br> serial communication bus can communicate <br> an alarm to other equipment. |

## NOTE

Low Power Detection must be Enabled (22-21 Low Power Detection) and commissioned (using either parameter group 22-3*, No Flow Power Tuning, or 22-20 Low Power Auto Set-up) in order to use Dry Pump Detection.

## NOTE

Do not set 14-20 Reset Mode, to [13] Infinite auto reset, when 22-26 Dry Pump Function is set to [2] Alarm. Doing so will cause the drive to continuously cycle between running and stopping when a Dry Pump condition is detected.

## NOTE

If the drive is equipped with a constant speed bypass with an automatic bypass function that starts the bypass if the drive experiences a persistent alarm condition, be sure to disable the bypass's automatic bypass function, if [2] Alarm or [3] Man. Reset Alarm is selected as the Dry Pump Function.

| 22-40 Minimum Run Time |  |  |
| :--- | :--- | :--- | :--- |
| Range: |  | Function: |
| $10 \mathrm{~s}^{*}$ | $[0-600 \mathrm{~s}]$ | Set the desired minimum running time for the <br> motor after a start command (digital input or <br> Bus) before entering Sleep Mode. |

## 22-41 Minimum Sleep Time

| Range: |  | Function: |
| :---: | :--- | :--- |
| $10 \mathrm{~s}^{*}$ | $[0-600 \mathrm{~s}]$ | Set the desired Minimum Time for staying in <br> Sleep Mode. This will override any wake up <br> conditions. |

| 22-42 Wake-up Speed [RPM] |  |  |
| :--- | :--- | :--- |
| Range: | Function: |  |
| Size <br> related* | [par. 4-11 <br> RPM] <br> Rar. 4-13 | To be used if $0-02$ Motor Speed Unit has <br> been set for RPM (parameter not visible if <br> Hz selected). Only to be used if <br> $1-00$ Configuration Mode is set for Open <br> Loop and speed reference is applied by <br> an external controller. <br> Set the reference speed at which the <br> Sleep Mode should be cancelled. |

## 22-60 Broken Belt Function

Selects the action to be performed if the Broken Belt condition is detected
Option: Function:

| [0] * | Off |  |
| :--- | :--- | :--- |
| [1] | Warning | The drive will continue to run, but activate a Broken <br> Belt Warning [W95]. A drive digital output or a <br> serial communication bus can communicate a <br> warning to other equipment. |
| [2] | Trip | The drive will stop running and activate a Broken <br> Belt alarm [A 95]. A drive digital output or a serial <br> communication bus can communicate an alarm to <br> other equipment. |

## NOTE

Do not set 14-20 Reset Mode, to [13] Infinite auto reset, when 22-60 Broken Belt Function is set to [2] Trip. Doing so will cause the drive to continuously cycle between running and stopping when a broken belt condition is detected.

## NOTE

If the drive is equipped with a constant speed bypass with an automatic bypass function that starts the bypass if the drive experiences a persistent alarm condition, be sure to disable the bypass's automatic bypass function, if [2] Trip is selected as the Broken Belt Function.

| 22-61 |  | Broken Belt Torque |
| :--- | :--- | :--- |
| Range: |  | Function: |
| $10 \%^{*}$ | $[0-100 \%]$ | Sets the broken belt torque as a percentage <br> of the rated motor torque. |

| 22-62 Broken Belt Delay |  |  |
| :--- | :--- | :--- |
| Range: |  | Function: |
| 10 s | $[0-600 \mathrm{~s}]$ | Sets the time for which the Broken Belt <br> conditions must be active before carrying out <br> the action selected in 22-60 Broken Belt <br> Function. |

| 22-75 Short Cycle Protection |  |  |  |
| :---: | :---: | :---: | :---: |
| Option: |  | Function: |  |
| [0] * | Disabled | Timer set in 22-76 Interval between Starts is disabled. |  |
| [1] | Enabled | Timer set in 22-76 Interval between Starts is enabled. |  |
| 22-76 Interval between Starts |  |  |  |
| Range: Function: |  |  |  |
| Size r | related** | $\begin{aligned} & \text { [par. 22-77- } \\ & 3600 \mathrm{~s}] \end{aligned}$ | Sets the time desired as minimum time between two starts. Any normal start command (Start/Jog/Freeze) will be disregarded until the timer has expired. |
| 22-77 Minimum Run Time |  |  |  |
| Range: Function: |  |  |  |
| $0 \mathrm{~s}^{*}$ | $\begin{gathered} \hline[0-\text { par. } \\ 22-76 \mathrm{~s}] \end{gathered}$ | Sets the time desired as minimum run time after a normal start command (Start/Jog/Freeze). Any normal stop command will be disregarded until the set time has expired. The timer will start counting following a normal start command (Start/Jog/Freeze). <br> The timer will be overridden by a Coast (Inverse) or an External Interlock command. |  |

## NOTE

Does not work in cascade mode.

### 6.1.5 Main Menu mode

Both the GLCP and NLCP provide access to the main menu mode. Select the Main Menu mode by pressing the [Main Menu] key. Illustration 6.2 shows the resulting read-out, which appears on the display of the GLCPLCP.
Lines 2 through 5 on the display show a list of parameter groups which can be chosen by toggling the up and down buttons.

Illustration 6.9 Display example.

Each parameter has a name and number which remain the same regardless of the programming mode. In the Main Menu mode, the parameters are divided into groups. The first digit of the parameter number (from the left) indicates the parameter group number.

All parameters can be changed in the Main Menu. The configuration of the unit (1-00 Configuration Mode) will determine other parameters available for programming. For example, selecting Closed Loop enables additional parameters related to closed loop operation. Option cards added to the unit enable additional parameters associated with the option device.

### 6.1.6 Parameter Selection

In the Main Menu mode, the parameters are divided into groups. Select a parameter group by means of the navigation keys. The following parameter groups are accessible:

| Group no. | Parameter group: |
| :--- | :--- |
| 0 | Operation/Display |
| 1 | Load/Motor |
| 2 | Brakes |
| 3 | References/Ramps |
| 4 | Limits/Warnings |
| 5 | Digital In/Out |
| 6 | Analog In/Out |
| 8 | Comm. and Options |
| 9 | Profibus |
| 10 | CAN Fieldbus |
| 11 | LonWorks |
| 13 | Smart Logic |
| 14 | Special Functions |
| 15 | Drive Information |
| 16 | Data Readouts |
| 18 | Data Readouts 2 |
| 20 | Drive Closed Loop |
| 21 | Ext. Closed Loop |
| 22 | Application Functions |
| 23 | Time-based Functions |
| 24 | Fire Mode |
| 25 | Cascade Controller |
| 26 | Analog I/O Option MCB 109 |

Table 6.3 Parameter groups.
After selecting a parameter group, choose a parameter by means of the navigation keys.
The middle section on the GLCP display shows the parameter number and name as well as the selected parameter value.

Illustration 6.10 Display example.

### 6.1.7 Changing Data

1. Press [Quick Menu] or [Main Menu] key.
2. Use $[\mathbf{\Delta}]$ and $[\mathbf{v}]$ keys keys to find parameter group to edit.
3. Press [OK] key.
4. Use [ $\mathbf{\Delta}]$ and [ $\mathbf{v}]$ keys to find parameter to edit.
5. Press [OK] key.
6. Use [ $\mathbf{\Delta}]$ and [ $\mathbf{v}]$ keys to select correct parameter setting. Or, to move to digits within a number, use keys. Cursor indicates digit selected to change. [ $\mathbf{\Delta}]$ key increases the value, [ $\mathbf{v}]$ key decreases the value.
7. Press [Cancel] key to disregard change, or press [OK] key to accept change and enter new setting.

### 6.1.8 Changing a text value

If the selected parameter is a text value, change the text value by means of the up/down navigation keys.
The up key increases the value, and the down key decreases the value. Place the cursor on the value to be saved and press [OK].

Illustration 6.11 Display example.

### 6.1.9 Changing a group of numeric data values

If the chosen parameter represents a numeric data value, change the chosen data value by means of the [ $\mathbb{4}]$ and $[\downarrow]$ navigation keys as well as the up/down $[\boldsymbol{\Delta}][\boldsymbol{\nabla}]$ navigation keys. Use the $\varangle]$ and $[\boldsymbol{\bullet}]$ navigation keys to move the cursor horizontally.

Illustration 6.12 Display example.

Use the up/down navigation keys to change the data value. The up key enlarges the data value, and the down key reduces the data value. Place the cursor on the value to be saved and press [OK].

Illustration 6.13 Display example.

### 6.1.10 Changing of data value, Step-by-Step

Certain parameters can be changed step by step or infinitely variably. This applies to 1-20 Motor Power [kW], 1-22 Motor Voltage and 1-23 Motor Frequency.
The parameters are changed both as a group of numeric data values and as numeric data values infinitely variably.

### 6.1.11 Read-out and programming of indexed parameters

Parameters are indexed when placed in a rolling stack.
15-30 Alarm Log: Error Code to 15-32 Alarm Log: Time contain a fault log which can be read out. Choose a parameter, press [OK], and use the up/down navigation keys to scroll through the value log.

Use 3-10 Preset Reference as another example:
Choose the parameter, press [OK], and use the up/down navigation keys keys to scroll through the indexed values. To change the parameter value, select the indexed value and press [OK]. Change the value by using the up/down keys. Press [OK] to accept the new setting. Press [Cancel] to abort. Press [Back] to leave the parameter.

### 6.1 Parameter lists

### 6.1.1 Main Menu Structure

Parameters for the frequency converter are grouped into various parameter groups for easy selection of the correct parameters for optimized operation of the frequency converter.
The vast majority of IVS 102 applications can be programmed using the Quick Menu button and selecting the parameters under Quick Setup and Function Setups.
Descriptions and default settings of parameters may be found under the section Parameter Lists at the back of this manual.

## 7 General Specifications

Mains supply (L1, L2, L3):
Supply voltage
Supply voltage
Mains voltage low / mains drop-out:
During low mains voltage or a mains drop-out, the FC continues until the intermediate circuit voltage drops below the minimum stop
level, which corresponds typically to 15\% below the FC's lowest rated supply voltage. Power-up and full torque cannot be expected at
mains voltage lower than 10\% below the FC's lowest rated supply voltage.
Supply frequency
Max. imbalance temporary between mains phases
True Power Factor ( $\lambda$ )
Displacement Power Factor ( $\cos \varphi$ ) near unity
Switching on input supply L1, L2, L3 (power-ups)
Environment according to EN60664-1

The unit is suitable for use on a circuit capable of delivering not more than 100.000 RMS symmetrical Amperes, $480 / 690 \mathrm{~V}$ maximum.
Motor output (U, V, W):
Output voltage $0-100 \%$ of supply voltage
Output frequency $0-800^{*} \mathrm{~Hz}$

Switching on output Unlimited
Ramp times $1-3600 \mathrm{sec}$.

* Voltage and power dependent

Torque characteristics:
Starting torque (Constant torque)
Starting torque
Overload torque (Constant torque)
*Percentage relates to the frequency converter's nominal torque.
Cable lengths and cross sections:
Max. motor cable length, screened/armoured 150 m
Max. motor cable length, unscreened/unarmoured $\quad 300 \mathrm{~m}$
Max. cross section to motor, mains, load sharing and brake *
Maximum cross section to control terminals, rigid wire $\quad 1.5 \mathrm{~mm}^{2} / 16$ AWG ( $2 \times 0.75 \mathrm{~mm}^{2}$ )
Maximum cross section to control terminals, flexible cable
$1 \mathrm{~mm}^{2} / 18$ AWG
Maximum cross section to control terminals, cable with enclosed core $\quad 0.5 \mathrm{~mm}^{2} / 20$ AWG
Minimum cross section to control terminals
$0.25 \mathrm{~mm}^{2}$

* See Mains Supply tables for more information!

Digital inputs:
Programmable digital inputs
Terminal number
Logic
Voltage level
Voltage level, logic'0' PNP
Voltage level, logic'1' PNP
Voltage level, logic 1 ' NPN
Voltage level, logic 1 ' NPN

All digital inputs are galvanically isolated from the supply voltage (PELV) and other high-voltage terminals.

1) Terminals 27 and 29 can also be programmed as output.
Analog inputs:
Number of analog inputs
Terminal number
Modes
Mode select
Voltage mode
Voltage level
Input resistance, $R_{i}$
Max. voltage
Current mode
Current level
Input resistance, $R_{i}$
Max. current
Resolution for analog inputs
Accuracy of analog inputs
Bandwidth

The analog inputs are galvanically isolated from the supply voltage (PELV) and other high-voltage terminals.

01⁄LILV80EL

Pulse inputs:

| Programmable pulse inputs |
| :--- |
| Terminal number pulse |
| Max. frequency at terminal, 29, 33 |
| Max. frequency at terminal, 29, 33 |
| Min. frequency at terminal 29,33 |
| Voltage level |
| Maximum voltage on input |
| Input resistance, $R_{i}$ |
| Pulse input accuracy ( $0.1-1 \mathrm{kHz}$ ) |
| Analog output: |
| Number of programmable analog outputs |
| Terminal number |
| Current range at analog output |
| Max. resistor load to common at analog output |
| Accuracy on analog output |
| Resolution on analog output |

The analog output is galvanically isolated from the supply voltage (PELV) and other high-voltage terminals.
Control card, RS-485 serial communication:
Terminal number
68 (P,TX+, RX+), 69 (N,TX-, RX-)
Terminal number 61 Common for terminals 68 and 69

The RS-485 serial communication circuit is functionally seated from other central circuits and galvanically isolated from the supply voltage (PELV).
Digital output:
Programmable digital/pulse outputs
Terminal number
Voltage level at digital/frequency output
Max. output current (sink or source)
Max. load at frequency output
Max. capacitive load at frequency output
Minimum output frequency at frequency output
Maximum output frequency at frequency output
Accuracy of frequency output
Resolution of frequency outputs

1) Terminal 27 and 29 can also be programmed as input.

The digital output is galvanically isolated from the supply voltage (PELV) and other high-voltage terminals.
Control card, 24 V DC output:
Terminal number
Max. load
12,13
$: 200$

The 24 V DC supply is galvanically isolated from the supply voltage (PELV), but has the same potential as the analog and digital inputs and outputs.
Relay outputs:

| Programmable relay outputs | 2 |
| :---: | :---: |
| Relay 01 Terminal number | 1-3 (break), 1-2 (make) |
| Max. terminal load (AC-1) ${ }^{1}$ ) on 1-3 (NC), 1-2 (NO) (Resistive load) | 240 V AC, 2 A |
| Max. terminal load (AC-15) ${ }^{1}$ ( Inductive load @ $\cos \varphi$ 0.4) | $240 \mathrm{~V} \mathrm{AC}, 0.2 \mathrm{~A}$ |
| Max. terminal load (DC-1) ${ }^{1}$ ) on 1-2 (NO), 1-3 (NC) (Resistive load) | 60 V DC, 1A |
| Max. terminal load (DC-13) ${ }^{1)}$ (Inductive load) | 24 V DC, 0.1 A |
| Relay 02 Terminal number | 4-6 (break), 4-5 (make) |
| Max. terminal load (AC-1) ${ }^{1}$ on 4-5 (NO) (Resistive load) ${ }^{2 / 3)}$ | $400 \mathrm{~V} \mathrm{AC}$, |
| Max. terminal load (AC-15) ${ }^{1)}$ on 4-5 (NO) (Inductive load @ $\cos \varphi$ 0.4) | 240 V AC, 0.2 A |
| Max. terminal load (DC-1) ${ }^{1 /}$ on 4-5 (NO) (Resistive load) | 80 V DC, 2 A |
| Max. terminal load (DC-13) ${ }^{1}$ on 4-5 (NO) (Inductive load) | 24 V DC, 0.1A |
| Max. terminal load (AC-1) ${ }^{1 /}$ on 4-6 (NC) (Resistive load) | 240 V AC, 2 A |
| Max. terminal load (AC-15) ${ }^{1)}$ on 4-6 (NC) (Inductive load @ $\cos \varphi$ 0.4) | $240 \mathrm{~V} \mathrm{AC}, \mathrm{0.2A}$ |
| Max. terminal load (DC-1) ${ }^{1}$ on 4-6 (NC) (Resistive load) | 50 V DC, 2 A |
| Max. terminal load (DC-13)1) on 4-6 (NC) (Inductive load) | 24 V DC, 0.1 A |
| Min. terminal load on 1-3 (NC), 1-2 (NO), 4-6 (NC), 4-5 (NO) | 24 V DC $10 \mathrm{~mA}, 24 \mathrm{~V}$ AC 20 mA |
| Environment according to EN 60664-1 | overvoltage category III/pollution degree 2 |

## 1) IEC $60947 t 4$ and 5

The relay contacts are galvanically isolated from the rest of the circuit by reinforced isolation (PELV).
2) Overvoltage Category II
3) UL applications 300 V AC 2 A

Control card, 10 V DC output:
Terminal number
Output voltage
Max. load $\square$

The 10 V DC supply is galvanically isolated from the supply voltage (PELV) and other high-voltage terminals.
Control characteristics:
Resolution of output frequency at $0-1000 \mathrm{~Hz} \quad:+/-0.003 \mathrm{~Hz}$
System response time (terminals 18, 19, 27, 29, 32, 33) : 2 ms
Speed control range (open loop)
Speed accuracy (open loop)
30-4000 rpm: Maximum error of $\pm 8 \mathrm{rpm}$
All control characteristics are based on a 4-pole asynchronous motor

## NOTE

Connection to PC is carried out via a standard host/device USB cable.
The USB connection is galvanically isolated from the supply voltage (PELV) and other high-voltage terminals.
The USB connection is not galvanically isolated from protection earth. Use only isolated laptop/PC as connection
to the USB connector on the frequency converter or an isolated USB cable/converter.

## Protection and Features:

- Electronic thermal motor protection against overload.
- Temperature monitoring of the heatsink ensures that the frequency converter trips if the temperature reaches a predefined level. An overload temperature cannot be reset until the temperature of the heatsink is below the values stated in the tables on the following pages (Guideline - these temperatures may vary for different power sizes, frame sizes, enclosure ratings etc.).
- The frequency converter is protected against short-circuits on motor terminals $\mathrm{U}, \mathrm{V}, \mathrm{W}$.
- If a mains phase is missing, the frequency converter trips or issues a warning (depending on the load).
- Monitoring of the intermediate circuit voltage ensures that the frequency converter trips if the intermediate circuit voltage is too low or too high.
- The frequency converter is protected against earth faults on motor terminals $\mathrm{U}, \mathrm{V}, \mathrm{W}$.

1) For type of fuse see section Fuses.
2) American Wire Gauge.
3) Measured using 5 m screened motor cables at rated load and rated frequency.
4) The typical power loss is at nominal load conditions and expected to be within $+/-15 \%$ (tolerence relates to variety in voltage and cable conditions). Values are based on a typical motor efficiency (eff2/eff3 border line). Motors with lower efficiency will also add to the power loss in the frequency converter and opposite. If the switching frequency is increased comed to the default setting, the power losses may rise significantly.LCP and typical control card power consumptions are included. Further options and customer load may add up to 30 W to the losses. (Though typical only 4W extra for a fully loaded control card, or options for slot A or slot B, each).
Although measurements are made with state of the art equipment, some measurement inaccuracy must be allowed for (+/-5\%).

## 8 Warnings and Alarms

### 8.1.1 Alarms and Warnings

A warning or an alarm is signalled by the relevant LED on the front of the frequency converter and indicated by a code on the display.

A warning remains active until its cause is no longer present. Under certain circumstances operation of the motor may still be continued. Warning messages may be critical, but are not necessarily so.

In the event of an alarm, the frequency converter will have tripped. Alarms must be reset to restart operation once their cause has been rectified.

This may be done in four ways:

1. By using the [RESET] control button on the LCP.
2. Via a digital input with the "Reset" function.
3. Via serial communication/optional fieldbus.
4. By resetting automatically using the [Auto Reset] function, which is a default setting for IVS 102 Drive, see 14 -20 Reset Mode in the IVS 102 Programming Guide

## NOTE

After a manual reset using the [RESET] button on the LCP, the [AUTO ON] or [HAND ON] button must be pressed to restart the motor.

If an alarm cannot be reset, the reason may be that its cause has not been rectified, or the alarm is trip-locked (see also table on following page).

## AWARNING

Alarms that are trip-locked offer additional protection, means that the mains supply must be switched off before the alarm can be reset. After being switched back on, the frequency converter is no longer blocked and may be reset as described above once the cause has been rectified. Alarms that are not trip-locked can also be reset using the automatic reset function in 14-20 Reset Mode (Warning: automatic wake-up is possible!) If a warning and alarm is marked against a code in the table on the following page, this means that either a warning occurs before an alarm, or it can be specified whether it is a warning or an alarm that is to be displayed for a given fault. This is possible, for instance, in 1-90 Motor Thermal Protection. After an alarm or trip, the motor carries on coasting, and the alarm and warning flash on the frequency converter. Once the problem has been rectified, only the alarm continues flashing.

## Warnings and Alarms

Table 8.1 Alarm/Warning code list
(X) Dependent on parameter

1) Can not be Auto reset via 14-20 Reset Mode

A trip is the action when an alarm has appeared. The trip will coast the motor and can be reset by pressing the reset button or make a reset by a digital input (parameter group 5-1* [1]). The original event that caused an alarm cannot damage the frequency converter or cause dangerous conditions. A trip lock is an action when an alarm occurs, which may cause damage to frequency converter or connected parts. A Trip Lock situation can only be reset by a power cycling.

| LED indication |  |
| :---: | :---: |
| Warning | yellow |
| Alarm | flashing red |
| Trip locked | yellow and red |

Table 8.3 Description of Alarm Word, Warning Word and Extended Status Word

The alarm words, warning words and extended status words can be read out via serial bus or optional fieldbus for diagnosis. See also 16-90 Alarm Word, 16-92 Warning Word and 16-94 Ext. Status Word.

### 8.1.2 Fault Messages

## WARNING 1,10 volts low

The control card voltage is below 10 V from terminal 50. Remove some of the load from terminal 50, as the 10 V supply is overloaded. Max. 15 mA or minimum $590 \Omega$.

This condition can be caused by a short in a connected potentiometer or improper wiring of the potentiometer.

Troubleshooting: Remove the wiring from terminal 50. If the warning clears, the problem is with the customer wiring. If the warning does not clear, replace the control card.

## WARNING/ALARM 2, Live zero error

This warning or alarm will only appear if programmed by the user in 6-01 Live Zero Timeout Function. The signal on one of the analog inputs is less than $50 \%$ of the minimum value programmed for that input. This condition can be caused by broken wiring or faulty device sending the signal.

WARNING/ALARM 3, No motor
No motor has been connected to the output of the frequency converter. This warning or alarm will only appear if programmed by the user in 1-80 Function at Stop.

Troubleshooting: Check the connection between the drive and the motor.

WARNING/ALARM 4, Mains phase loss A phase is missing on the supply side, or the mains voltage imbalance is too high. This message also appears for a fault in the input rectifier on the frequency converter. Options are programmed at 14-12 Function at Mains Imbalance.

Troubleshooting: Check the supply voltage and supply currents to the frequency converter.

## WARNING 5, DC link voltage high

The intermediate circuit voltage (DC) is higher than the high voltage warning limit. The limit is dependent on the drive voltage rating. The frequency converter is still active.

## WARNING 6, DC link voltage low

The intermediate circuit voltage (DC) is lower than the low voltage warning limit. The limit is dependent on the drive voltage rating. The frequency converter is still active.

## WARNING/ALARM 7, DC overvoltage

If the intermediate circuit voltage exceeds the limit, the frequency converter trips after a time.

## Troubleshooting:

Connect a brake resistor
Extend the ramp time
Change the ramp type
Activate functions in 2-10 Brake Function
Increase 14-26 Trip Delay at Inverter Fault

## WARNING/ALARM 8, DC under voltage

If the intermediate circuit voltage (DC) drops below the under voltage limit, the frequency converter checks if a 24 V backup supply is connected. If no 24 V backup supply is connected, the frequency converter trips after a fixed time delay. The time delay varies with unit size.

## WARNING/ALARM 9, Inverter overloaded

The frequency converter is about to cut out because of an overload (too high current for too long). The counter for electronic, thermal inverter protection gives a warning at $98 \%$ and trips at $100 \%$, while giving an alarm. The frequency converter cannot be reset until the counter is below $90 \%$. The fault is that the frequency converter is overloaded by more than $100 \%$ for too long. NOTE: See the derating section in the Design Guide for more details if a high switching frequency is required.

## WARNING/ALARM 10, Motor overload temperature

 According to the electronic thermal protection (ETR), the motor is too hot. Select whether the frequency converter gives a warning or an alarm when the counter reaches $100 \%$ in 1-90 Motor Thermal Protection. The fault is that the motor is overloaded by more than $100 \%$ for too long.
## Troubleshooting:

Check if motor is over heating.
If the motor is mechanically overloaded
That the motor 1-24 Motor Current is set correctly.
Motor data in parameters 1-20 through 1-25 are set correctly.
The setting in 1-91 Motor External Fan.
Run AMA in 1-29 Automatic Motor Adaptation (AMA).

## WARNING/ALARM 11, Motor thermistor over temp

The thermistor or the thermistor connection is disconnected. Select whether the frequency converter gives a warning or an alarm when the counter reaches $100 \%$ in 1-90 Motor Thermal Protection.

## Troubleshooting:

Check if motor is over heating.
Check if the motor is mechanically overloaded.
Check that the thermistor is connected correctly between terminal 53 or 54 (analog voltage input) and terminal 50 ( +10 V supply), or between terminal 18 or 19 (digital input PNP only) and terminal 50.
If a KTY sensor is used, check for correct connection between terminal 54 and 55.

If using a thermal switch or thermistor, check the programming of 1-93 Thermistor Source matches sensor wiring.

If using a KTY sensor, check the programming of parameters 1-95, 1-96, and 1-97 match sensor wiring.

## Troubleshooting:

This fault may be caused by shock loading or fast acceleration with high inertia loads.
Turn off the frequency converter. Check if the motor shaft can be turned.

Check that the motor size matches the frequency converter.

Incorrect motor data in parameters 1-20 through 1-25.

## ALARM 14, Earth (ground) fault

There is a discharge from the output phases to earth, either in the cable between the frequency converter and the motor or in the motor itself.

## Troubleshooting:

Turn off the frequency converter and remove the earth fault.

Measure the resistance to ground of the motor leads and the motor with a megohmmeter to check for earth faults in the motor.

Perform current sensor test.

## ALARM 15, Hardware mismatch

A fitted option is not operational with the present control board hardware or software.

Record the value of the following parameters and contact your Armstrong supplier:

$$
\begin{aligned}
& \text { 15-40 FC Type } \\
& \text { 15-41 Power Section } \\
& \text { 15-42 Voltage } \\
& \text { 15-43 Software Version } \\
& \text { 15-45 Actual Typecode String } \\
& \text { 15-49 SW ID Control Card } \\
& \text { 15-50 SW ID Power Card } \\
& \text { 15-60 Option Mounted } \\
& \text { 15-61 Option SW Version }
\end{aligned}
$$

## ALARM 16, Short circuit

There is short-circuiting in the motor or on the motor terminals.

Turn off the frequency converter and remove the shortcircuit.

## WARNING/ALARM 17, Control word timeout

There is no communication to the frequency converter. The warning will only be active when 8-04 Control Timeout Function is NOT set to OFF.
If 8-04 Control Timeout Function is set to Stop and Trip, a warning appears and the frequency converter ramps down until it trips, while giving an alarm.

## Troubleshooting:

Check connections on the serial communication cable.

Increase 8-03 Control Timeout Time
Check operation of the communication equipment.
Verify proper installation based on EMC requirements.

## WARNING 23, Internal fan fault

The fan warning function is an extra protection function that checks if the fan is running / mounted. The fan warning can be disabled in 14-53 Fan Monitor ([0] Disabled).

For the D, E, and F Frame drives, the regulated voltage to the fans is monitored.

## Troubleshooting:

Check fan resistance.
Check soft charge fuses.

## WARNING 24, External fan fault

The fan warning function is an extra protection function that checks if the fan is running / mounted. The fan warning can be disabled in 14-53 Fan Monitor ([0] Disabled).

For the D, E, and F Frame drives, the regulated voltage to the fans is monitored.

## Troubleshooting:

Check fan resistance.
Check soft charge fuses.

## WARNING 25, Brake resistor short circuit

The brake resistor is monitored during operation. If it short circuits, the brake function is disconnected and the warning appears. The frequency converter still works, but without the brake function. Turn off the frequency converter and replace the brake resistor (see 2-15 Brake Check).

## WARNING/ALARM 26, Brake resistor power limit

The power transmitted to the brake resistor is calculated: as a percentage, as a mean value over the last 120 seconds, on the basis of the resistance value of the brake resistor, and the intermediate circuit voltage. The warning is active when the dissipated braking power is higher than $90 \%$. If Trip [2] has been selected in 2-13 Brake Power Monitoring, the frequency converter cuts out and issues this alarm, when the dissipated braking power is higher than $100 \%$.

## WARNING/ALARM 27, Brake chopper fault

The brake transistor is monitored during operation and if it short-circuits, the brake function disconnects and issues a warning. The frequency converter is still able to run, but since the brake transistor has short-circuited, substantial power is transmitted to the brake resistor, even if it is inactive.
Turn off the frequency converter and remove the brake resistor.
This alarm/ warning could also occur should the brake resistor overheat. Terminal 104 to 106 are available as brake resistor. Klixon inputs, see section Brake Resistor Temperature Switch.

## WARNING/ALARM 28, Brake check failed

Brake resistor fault: the brake resistor is not connected or not working.
Check 2-15 Brake Check.

## ALARM 29, Heatsink temp

The maximum temperature of the heatsink has been exceeded. The temperature fault will not be reset until the temperature falls below a defined heatsink temperature. The trip and reset point are different based on the drive power size.

## Troubleshooting:

Ambient temperature too high.
Too long motor cable.
Incorrect clearance above and below the drive.
Dirty heatsink.
Blocked air flow around the drive.
Damaged heatsink fan.

For the D, E, and F Frame Drives, this alarm is based on the temperature measured by the heatsink sensor mounted inside the IGBT modules. For the F Frame drives, this alarm can also be caused by the thermal sensor in the Rectifier module.

## Troubleshooting:

Check fan resistance.
Check soft charge fuses.
IGBT thermal sensor.

## ALARM 30, Motor phase U missing

Motor phase $U$ between the frequency converter and the motor is missing.

Turn off the frequency converter and check motor phase $U$.

## ALARM 31, Motor phase V missing

Motor phase V between the frequency converter and the motor is missing.

Turn off the frequency converter and check motor phase V .

## ALARM 32, Motor phase W missing

Motor phase W between the frequency converter and the motor is missing.

Turn off the frequency converter and check motor phase W.

## ALARM 33, Inrush fault

Too many power-ups have occurred within a short time period. Let unit cool to operating temperature.

## WARNING/ALARM 34, Fieldbus communication fault

The fieldbus on the communication option card is not working.

## WARNING/ALARM 35, Out of frequency range:

This warning is active if the output frequency has reached the high limit (set in par. 4-53) or low limit (set in par. 4-52). In Process Control, Closed Loop (par. 1-00) this warning is displayed.

## WARNING/ALARM 36, Mains failure

This warning/alarm is only active if the supply voltage to the frequency converter is lost and 14-10 Mains Failure is NOT set to OFF. Check the fuses to the frequency converter

## ALARM 38, Internal fault

It may be necessary to contact your Armstrong supplier. Some typical alarm messages:

| 0 | Serial port cannot be initialized. Serious hardware failure |
| :---: | :--- |
| $256-258$ | Power EEPROM data is defect or too old |
| 512 | Control board EEPROM data is defect or too old |
| 513 | Communication time out reading EEPROM data |
| 514 | Communication time out reading EEPROM data |
| 515 | Application Orientated Control cannot recognize the |
| 516 | EEPROM data |
|  | Cannot write to the EEPROM because a write command is on |
| progress |  |
| 517 | Write command is under time out |
| 518 | Failure in the EEPROM |
| 519 | Missing or invalid Barcode data in EEPROM |
| 783 | Parameter value outside of min/max limits |
| $1024-1279$ | A can-telegram that has to be sent, couldn't be sent |
| 1281 | Digital Signal Processor flash timeout |
| 1282 | Power micro software version mismatch |
| 1283 | Power EEPROM data version mismatch |
| 1284 | Cannot read Digital Signal Processor software version |
| 1299 | Option SW in slot A is too old |
| 1300 | Option SW in slot B is too old |
| 1301 | Option SW in slot CO is too old |
| 1302 | Option SW in slot C1 is too old |
| 1315 | Option SW in slot A is not supported (not allowed) |
| 1316 | Option SW in slot B is not supported (not allowed) |
| 1317 | Option SW in slot CO is not supported (not allowed) |
| 1318 | Option SW in slot C1 is not supported (not allowed) |
| 1379 | Option A did not respond when calculating Platform Version. |
| 1380 | Option B did not respond when calculating Platform Version. |
| 1381 | Option CO did not respond when calculating Platform |
| 1382 | Version. |
| 1536 | Option C1 did not respond when calculating Platform |
| Version. |  |

| 1792 | DSP watchdog is active. Debugging of power t data Motor Orientated Control data not transferred correctly |
| :---: | :---: |
| 2049 | Power data restarted |
| 2064-2072 | H081x: option in slot $x$ has restarted |
| 2080-2088 | H082x: option in slot $x$ has issued a powerup-wait |
| 2096-2104 | H083x: option in slot $x$ has issued a legal powerup-wait |
| 2304 | Could not read any data from power EEPROM |
| 2305 | Missing SW version from power unit |
| 2314 | Missing power unit data from power unit |
| 2315 | Missing SW version from power unit |
| 2316 | Missing io_statepage from power unit |
| 2324 | Power card configuration is determined to be incorrect at power up |
| 2330 | Power size information between the power cards does not match |
| 2561 | No communication from DSP to ATACD |
| 2562 | No communication from ATACD to DSP (state running) |
| 2816 | Stack overflow Control board module |
| 2817 | Scheduler slow tasks |
| 2818 | Fast tasks |
| 2819 | Parameter thread |
| 2820 | LCP Stack overflow |
| 2821 | Serial port overflow |
| 2822 | USB port overflow |
| 2836 | cfListMempool to small |
| 3072-5122 | Parameter value is outside its limits |
| 5123 | Option in slot A: Hardware incompatible with Control board hardware |
| 5124 | Option in slot B: Hardware incompatible with Control board hardware |
| 5125 | Option in slot C0: Hardware incompatible with Control board hardware |
| 5126 | Option in slot C1: Hardware incompatible with Control board hardware |
| 5376-6231 | Out of memory |

## ALARM 39, Heatsink sensor

No feedback from the heatsink temperature sensor.
The signal from the IGBT thermal sensor is not available on the power card. The problem could be on the power card, on the gate drive card, or the ribbon cable between the power card and gate drive card.

## WARNING 40, Overload of Digital Output Terminal 27

Check the load connected to terminal 27 or remove shortcircuit connection. Check 5-00 Digital I/O Mode and 5-01 Terminal 27 Mode.

WARNING 41, Overload of Digital Output Terminal 29
Check the load connected to terminal 29 or remove shortcircuit connection. Check 5-00 Digital I/O Mode and 5-02 Terminal 29 Mode.

WARNING 42, Overload of Digital Output on X30/6 or Overload of Digital Output on X30/7
For X30/6, check the load connected to X30/6 or remove short-circuit connection. Check 5-32 Term X30/6 Digi Out (MCB 101).
For X30/7, check the load connected to X30/7 or remove short-circuit connection. Check 5-33 Term X30/7 Digi Out (MCB 101).

## ALARM 46, Power card supply

The supply on the power card is out of range.
There are three power supplies generated by the switch mode power supply (SMPS) on the power card: $24 \mathrm{~V}, 5 \mathrm{~V}$, +/18 V . When powered with 24 VDC with the MCB 107 option, only the 24 V and 5 V supplies are monitored. When powered with three phase mains voltage, all three supplied are monitored.

## WARNING 47, 24 V supply low

The 24 V DC is measured on the control card. The external V DC backup power supply may be overloaded, otherwise contact your Armstrong supplier.
WARNING 48, 1.8 V supply low
The 1.8 V DC supply used on the control card is outside of allowable limits. The power supply is measured on the control card.

## WARNING 49, Speed limit

When the speed is not within the specified range in par. 4-11 and par. 4-13. the drive will show a warning. When the speed is below the specified limit in 1-86 Trip Speed Low [RPM] (except when starting or stopping) the drive will trip.

## ALARM 50, AMA calibration failed

Contact your Armstrong supplier.
ALARM 51, AMA check Unom and Inom
The setting of motor voltage, motor current, and motor power is presumably wrong. Check the settings.

## ALARM 52, AMA low Inom

The motor current is too low. Check the settings.

## ALARM 53, AMA motor too big

The motor is too big for the AMA to be carried out.
ALARM 54, AMA motor too small
The motor is too big for the AMA to be carried out.
ALARM 55, AMA Parameter out of range
The parameter values found from the motor are outside acceptable range.

## ALARM 56, AMA interrupted by user

The AMA has been interrupted by the user.

## ALARM 57, AMA timeout

Try to start the AMA again a number of times, until the AMA is carried out. Please note that repeated runs may heat the motor to a level where the resistance Rs and Rr are increased. In most cases, however, this is not critical.

## ALARM 58, AMA internal fault

Contact your Armstrong supplier.

## WARNING 59, Current limit

The current is higher than the value in 4-18 Current Limit.
WARNING 60, External interlock
External interlock has been activated. To resume normal operation, apply 24 V DC to the terminal programmed for external interlock and reset the frequency converter (via serial communication, digital I/O, or by pressing reset button on keypad).

## WARNING 61, Tracking error

An error has been detected between calculated motor speed and speed measurement from feedback device. The function for Warning/Alarm/Disable is set in 4-30, Motor Feedback Loss Function, error setting in 4-31, Motor Feedback Speed Error, and the allowed error time in 4-32, Motor Feedback Loss Timeout. During a commissioning procedure the function may be effective.

WARNING 62, Output frequency at maximum limit The output frequency is higher than the value set in 4-19 Max Output Frequency

## WARNING 64, Voltage limit

The load and speed combination demands a motor voltage higher than the actual DC link voltage.

WARNING/ALARM/TRIP 65, Control card over temperature Control card over temperature: The cutout temperature of the control card is $80^{\circ} \mathrm{C}$.

## WARNING 66, Heatsink temperature low

This warning is based on the temperature sensor in the IGBT module.

## Troubleshooting:

ALARM 67, Option module configuration has changed One or more options have either been added or removed since the last power-down.

## ALARM 68, Safe stop activated

Safe stop has been activated. To resume normal operation, apply 24 V DC to terminal 37 , then send a reset signal (via Bus, Digital I/O, or by pressing the reset key. See 5-19 Terminal 37 Safe Stop.

## ALARM 69, Power card temperature

The temperature sensor on the power card is either too hot or too cold.

## Troubleshooting:

Check the operation of the door fans.
Check that the filters for the door fans are not blocked.

Check that the gland plate is properly installed on IP 21 and IP 54 (NEMA 1 and NEMA 12) drives.

## ALARM 70, Illegal FC Configuration

Actual combination of control board and power board is illegal.

## WARNING/ALARM 71, PTC 1 safe stop

Safe Stop has been activated from the MCB 112 PTC
Thermistor Card (motor too warm). Normal operation can be resumed when the MCB 112 applies 24 V DC to $\mathrm{T}-37$ again (when the motor temperature reaches an acceptable level) and when the Digital Input from the MCB 112 is deactivated. When that happens, a reset signal must be is be sent (via serial communication, digital I/O, or by pressing reset button on keypad). Note that if automatic restart is enabled, the motor may start when the fault is cleared.

## ALARM 72, Dangerous failure

Safe stop with trip lock. Unexpected signal levels on safe stop and digital input from the MCB 112 PTC thermistor card.

## WARNING 73, Safe stop auto restart

Safe stopped. Note that with automatic restart enabled, the motor may start when the fault is cleared.

## Warning 76, Power Unit Setup

The required number of power units does not match the detected number of active power units.

WARNING 77, Reduced power mode:
This warning indicates that the drive is operating in reduced power mode (i.e. less than the allowed number of inverter sections). This warning will be generated on power cycle when the drive is set to run with fewer inverters and will remain on.

## ALARM 79, Illegal power section configuration

The scaling card is the incorrect part number or not installed. Also MK102 connector on the power card could not be installed.

## ALARM 80, Drive initialized to default value

Parameter settings are initialized to default settings after a manual reset.

## ALARM 91, Analog input 54 wrong settings

Switch S202 has to be set in position OFF (voltage input) when a KTY sensor is connected to analog input terminal 54.

## ALARM 92, No flow

A no-load situation has been detected in the system. See parameter group 22-2.

ALARM 93, Dry pump
A no-flow situation and high speed indicates that the pump has run dry. See parameter group 22-2.

## ALARM 94, End of curve

Feedback stays lower than the set point which may indicate leakage in the pipe system. See parameter group 22-5.

## ALARM 95, Broken belt

Torque is below the torque level set for no load, indicating a broken belt. See parameter group 22-6.

## ALARM 96, Start delayed

Motor start has been delayed due to short-cycle protection active. See parameter group 22-7.
WARNING 97, Stop delayed
Stopping the motor has been delayed due to short cycle protection is active. See parameter group 22-7.

## WARNING 98, Clock fault

Clock Fault. Time is not set or RTC clock (if mounted) has failed. See parameter group 0-7.

## WARNING 201, Fire M was Active

Fire Mode has been active.
WARNING 202, Fire M Limits Exceeded
Fire Mode has suppressed one or more warranty voiding alarms.

## WARNING 203, Missing Motor

A multi-motor under-load situation was detected, this could be due to e.g. a missing motor.

## WARNING 204, Locked Rotor

A multi-motor overload situation was detected, this could be due to e.g. a locked rotor.

## ALARM 243, Brake IGBT

This alarm is only for F Frame drives. It is equivalent to Alarm 27. The report value in the alarm log indicates which power module generated the alarm:
$1=$ left most inverter module.
$2=$ middle inverter module in F2 or F4 drive.
$2=$ right inverter module in F1 or F3 drive.
$3=$ right inverter module in F2 or F4 drive.
$5=$ rectifier module.

## ALARM 244, Heatsink temperature

This alarm is only for F Frame drives. It is equivalent to Alarm 29. The report value in the alarm log indicates which power module generated the alarm:

$$
\begin{aligned}
& 1=\text { left most inverter module. } \\
& 2=\text { middle inverter module in F2 or F4 drive. } \\
& 2=\text { right inverter module in F1 or F3 drive. } \\
& 3=\text { right inverter module in F2 or F4 drive. } \\
& 5=\text { rectifier module. }
\end{aligned}
$$

## ALARM 245, Heatsink sensor

This alarm is only for F Frame drives. It is equivalent to Alarm 39. The report value in the alarm log indicates which power module generated the alarm:

1 = left most inverter module.
$2=$ middle inverter module in F2 or F4 drive.
2 = right inverter module in F1 or F3 drive.
3 = right inverter module in F2 or F4 drive.
5 = rectifier module.

## ALARM 246, Power card supply

This alarm is only for F Frame drives. It is equivalent to Alarm 46. The report value in the alarm log indicates which power module generated the alarm:

1 = left most inverter module.
2 = middle inverter module in F2 or F4 drive.
$2=$ right inverter module in F1 or F3 drive.
3 = right inverter module in F2 or F4 drive.
$5=$ rectifier module.

## ALARM 247, Power card temperature

This alarm is only for F Frame drives. It is equivalent to Alarm 69. The report value in the alarm log indicates which power module generated the alarm:
$1=$ left most inverter module.
$2=$ middle inverter module in F2 or F4 drive.
$2=$ right inverter module in F1 or F3 drive.
3 = right inverter module in F2 or F4 drive.
$5=$ rectifier module.

## ALARM 248, Illegal power section configuration

This alarm is only for F Frame drives. It is equivalent to Alarm 79. The report value in the alarm log indicates which power module generated the alarm:

1 = left most inverter module.
$2=$ middle inverter module in F2 or F4 drive.
2 = right inverter module in F1 or F3 drive.
3 = right inverter module in F2 or F4 drive.
5 = rectifier module.

## ALARM 250, New spare part

The power or switch mode power supply has been exchanged. The frequency converter type code must be restored in the EEPROM. Select the correct type code in 14-23 Typecode Setting according to the label on the unit. Remember to select 'Save to EEPROM' to complete.

## ALARM 251, New type code

The frequency converter has a new type code.
