MECHANICAL SEAL DESIG	GN DATA	*If minimum maintained system press	ure is not known: Default to 40% of design heac
See file no. 43.50 for standard mechanical seal details as indicated below		**The IVS 102 drive is a low harmonic of guaranty performance to any system	drive via built-in DC line reactors. This does not n wide harmonic specification or the costs to supplied with the system electrical details,

Armstrong will run a computer simulation of the system wide harmonics. If system

harmonic levels are exceeded Armstrong can also recommend additional harmonic

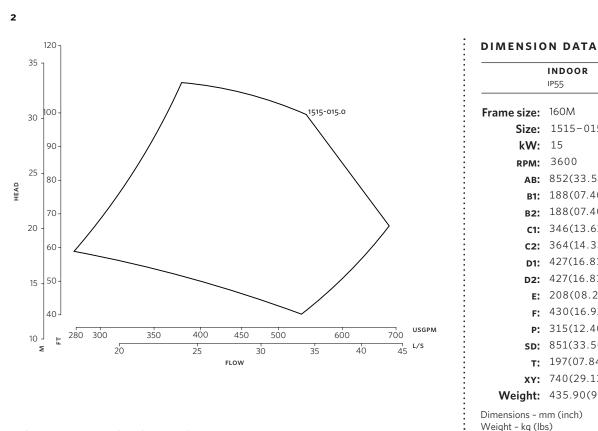

mitigation and the costs for such mitigation.
