Fused disconnect switch: $\square$
EMI/RFI Control: Integrated filter designed to meet EN61800-3
Harmonic suppression: Dual DC-link reactors
(Equivalent: 5\% AC line reactor)
Supporting leee 519-1992 requirements**
Cooling: Fan-cooled through back channel
Ambient temperature: $-10^{\circ} \mathrm{C}$ to $+45^{\circ} \mathrm{C}$ up to 1000 meters above sea level $\left(+14^{\circ} \mathrm{F}\right.$ to $+113^{\circ} \mathrm{F}$, 3300 ft )
Analog I/0: Two current or voltage inputs, one speed output
Digital I/o: Two inputs, two outputs
Pulse inputs: Two programmable
Relay outputs: Two programmable
Communication port: 1-RS485
** The IVs drive is a low harmonic drive via built-in DC line reactors. This does not guaranty performance to any system wide harmonic specification or the costs to meet a system wide specification. If supplied with the system electrical details, Armstrong will run a computer simulation of the system wide harmonics. If system harmonic levels are exceeded Armstrong can also recommend additional harmonic mitigation and the costs for such mitigation.

## FLOW READOUT ACCURACY

The Design Envelope model selected will provide flow reading on the controls local keypad \& digitally for the BMS. The model readout will be factory tested to ensure $\pm 5 \%$ accuracy.

## OPTIONS

## SENSORLESS BUNDLE (STANDARD)

Con
Operation of pump without a remote sensor. Includes:

- Sensorless control
- Flow readout
- Constant flow
- Constant pressure

Minimum system pressure to be maintained ft (m)

* If minimum maintained system pressure is not known: Default to $40 \%$ of design head

PARALLEL SENSORLESS
Operation of multiple pumps without a remote sensor

Minimum system pressure to be maintained ft (m)

* If minimum maintained system pressure is not known: Default to $40 \%$ of design head

Provides energy savings on oversized systems by adjusting pump parameters to on-site conditions. Includes:

- Auto-flow balancing - Automatically determines control curve between design flow at on-site system head, and minimum (zerohead) flow for energy savings
- Maximum flow control - Limits flow rate to pre-set maximum for potential energy savings
Maximum flow rate $\qquad$ gpm (L/s)
*Only available if sensorless bundle is enabled
*Available in single pump operation only
$\square$ PROTECTION BUNDLE

Protects other flow sensitive equipment by setting limits of pump operation. Includes:

- Minimum flow control - Attempts to maintain flow rate to pre-set minimum to protect equipment in system
- Bypass valve control - Actuates a bypass valve to protect flow sensitive equipment if pre-set minimum flow rate is reached Minimum flow rate $\qquad$ gpm (L/s)

Pre-sets heating and cooling parameters for pumps in 2-pipe systems

## Cooling

Duty point $\qquad$ gpm (L/s) at $\qquad$ ft (m)

Minimum system pressure to be maintained ft (m)

## Heating

Duty point $\qquad$ gpm (L/s) at $\qquad$ ft (m)
Minimum system pressure to be maintained ft (m)
*Available in single pump operation only

## OPTIONAL SERVICES

ON-SITE PUMP COMMISSIONING

## PUMP MANAGER

Online service for sustained pump performance and enhanced reliability.

Available in 3 or 5 year terms

* Requires an internet connection to be provided by building
* Includes an extended warranty for parts and labour
(wearable parts excluded)
