** If supplied with the system electrical details, Armstrong will run a computer simulation of the system wide harmonics. If system harmonic levels are exceeded Armstrong can also recommend additional harmonic mitigation and the costs for such mitigation.

## OPTIONS

## SENSORLESS BUNDLE (STANDARD)

Operation of pump without a remote sensor. Includes:

- Sensorless control
- Flow readout
- Constant flow
- Constant pressure

Minimum system pressure to be maintained m (ft)

* If minimum maintained system pressure is not known: Default to $40 \%$ of design head

## PARALLEL SENSORLESS (STANDARD)

Operation of multiple pumps without a remote sensor

Minimum system pressure to be maintained m (ft)

* If minimum maintained system pressure is not known: Default to $40 \%$ of design head

## $\square$ ENERGY PERFORMANCE BUNDLE

Provides energy savings on oversized systems by adjusting pump parameters to on-site conditions. Includes:

- Auto-flow balancing - Automatically determines control curve between design flow at on-site system head, and minimum (zero-head) flow for energy savings
- Maximum flow control - Limits flow rate to pre-set maximum for potential energy savings

Maximum flow rate $\qquad$ L/s (gpm)
*Only available if sensorless bundle is enabled

## $\square \quad$ PROTECTION BUNDLE

Protects other flow sensitive equipment by setting limits of pump operation. Includes:

- Minimum flow control - Attempts to maintain flow rate to pre-set minimum to protect equipment in system
- Bypass valve control - Actuates a bypass valve to protect flow sensitive equipment if pre-set minimum flow rate is reached

## Maximum flow rate

$\qquad$ L/s (gpm)
