\*\* If supplied with the system electrical details, Armstrong will run a computer simulation of the system wide harmonics. If system harmonic levels are exceeded Armstrong can also recommend additional harmonic mitigation and the costs for such mitigation.

### FLOW READOUT ACCURACY

The Design Envelope model selected will provide flow reading on the controls local keypad & digitally for the BMS. The model readout will be factory tested to ensure  $\pm 5\%$  accuracy.

# OPTIONS

# SENSORLESS BUNDLE (STANDARD)

Operation of pump without a remote sensor. Includes:

- Sensorless control
- Flow readout
- Constant flow
- Constant pressure
- Minimum system pressure to be maintained ft (m)
- \* If minimum maintained system pressure is not known: Default to 40% of design head

PARALLEL SENSORLESS

Operation of multiple pumps without a remote sensor

Minimum system pressure to be maintained ft (m)

\* If minimum maintained system pressure is not known: Default to 40% of design head

# ENERGY PERFORMANCE BUNDLE

Provides energy savings on oversized systems by adjusting pump parameters to on-site conditions. Includes:

- Auto-flow balancing Automatically determines control curve between design flow at on-site system head, and minimum (zerohead) flow for energy savings
- Maximum flow control Limits flow rate to pre-set maximum for potential energy savings

qpm (L/s)

Maximum flow rate

\*Only available if sensorless bundle is enabled

\*Available in single pump operation only
